BOSS DIRECTORIES

The following is a list of directories published by the Business Opportunities Sourcing System (BOSS) for Industry, Science and Technology Canada (ISTC).

Directory of Canadian Manufacturers

Directory of Canadian Products

Directory of Canadian Trading Houses

Directory of Canadian Custom Brokers and Freight Forwarders

Directory of Canadian Construction Companies

Directory of Computer Software and Services

Canadian Directory of Marine Shipping

Directory of Research and Development Laboratories/Facilities in Canada

Services Directories

- Consulting Agrologists
- Management Consultants
- Architects
- Surveyors and Mappers
- Consulting Engineers

These directories can be obtained by contacting:

PART I

INTRODUCTION

INTRODUCTION

This directory is intended to help Canadians, as well as others, to locate R&D establishments having particular abilities and facilities. Many, but not all, of the industrial facilities solict R&D contracts, and many government laboratories participate in industrial R&D projects.

This directory covers two kinds of facilities, (i) industrial research and development laboratories (PARTS II to V) and (ii) federal government scientific and technilogical establishments (PART VI). Earlier directories covering this area were previously published bu Statistics Canada under the titles "Directory of Industrial Research and Development Facilities in Canada" and "Directory of Federal Government Scientific and Technilogical Establishments". The present directory is based on the earlier Statistics Canada ones, using to a large degree the same survey population. The assistance of Statistics Canada in planning and mailing the industrial questionnaire, as well as soliciting the federal government responses, is gratefully acknowledged.

Data were collected by Science and Technology Economic Analysis Division of ISTC by means of a voluntary survey, with responses being received during the summer and fall of 1989. ISTC is grateful to the companies and government organizations that have contributed their time and effort in completing the questionnaire. The Department has made a concerted effort to reproduce the collected information as accurately and completely as possible within the confines of format and scope and does not assume responsibility for errors or omissions.

The information contained in the industrial directory does not imply government endorsement of a company's capabilities.

Comments and suggestions for improvements in future editions would much appreciated.

CANADA AWARDS FOR BUSINESS EXCELLENCE

Excellence has always been an important quality of Canadian business, a fact to which Canada's success in the international marketplace bears witness.

The CANADA AWARDS FOR BUSINESS EXCELLENCE were created in 1984 by the the Government of Canada to honour businesses of all sizes and in all industry sectors for outstanding achievements in productivity, performance and innovation. These coveted awards have since become synonymous with the best in Canadian business.

The CANADA AWARDS FOR BUSINESS EXCELLENCE honour achievement in eight categories: Small Business, Productivity, Marketing, Entrepreneurship, Labour/Management Co-operation, Innovation, Invention and Industrial Design.

Selection is by independent teams of private sector experts. In each category the jurors choose up to five trophy winners - one gold, one silver and three bronze. A number of Certificates of Merit are also awarded.

Each year, Canada Awards winners are honoured by their peers and by all Canadians coast to coast.

The benefits are tangible and substantial. Winners become the focus of national attention. A prestigious awards ceremony and national advertising create country-wide recognition.

Winners can exhibit their awards proudly and use the logo of the Canada Awards in all communications. Past winners have noted a marked increase in employee motivation and productivity.

Winning a CANADA AWARDS FOR BUSINESS EXCELLENCE trophy is a considerable achievement, but participation itself can be rewarding by heightening the company's team spirit and pride in its success.

Further information can be obtained by contacting your nearest ISTC office or by contacting:

COMPANY PROFILES

NOTE TO COMPANY PROFILES

The establishments in this directory are listed alphabetically by name. Directory users seeking a listing should consider the different ways in which a company might be listed.

e.g. THE JOHN F. DOE CO. LTD.

JOHN F. DOE CO. LTD.

J.F. DOE. CO. LTD.

THE DOE CO. LTD.

DOE CO. LTD.

BOSS personnel can be of assistance in locating directory listings. Requests can be made by collect telephone call to (613) 954-5031 in Ottawa.

The following is a sample with an explanation of the items listed.

```

COMPANY LISTING BY PRODUCTS

NOTE TO COMPANY LISTING BY PRODUCTS

This section is produced by alphabetical product sequence with the firms listed alphabetically within each product. Also included within this section is a product index as an aid.

The following is a sample with an explanation of the items listed.

```
1___ ACRYLIC RESINS

2_____ DAVIS CONTROLS LTD.                      416-233-2742 FAX: 416-233-2643 ______5
3______  P.O. BOX 160,ISLINGTON ONTARIO,M9A4X2
4_______   MICRO-ELECTRONICS                   ELECTRICAL PRODUCTS
 _______   INSTRUMENTATION/CONTROLS
       GASTECH CORPORATION
         4251 DUNDAS STREET WEST,TORONTO ONTARIO,M8X1Y3
           SOFTWARE                            INDUSTRIAL MACHINERY
```

(1) Product for which R&D is performed
(2) Company name
(3) Mailing address
(4) Technologies within which R&D is performed
(5) Telephone and facsimile number

NOTE: The letters 'NES' following a product description stands for 'Not Elsewhere Specified'.

PRODUCT INDEX

ACETIC ACID, ITS SALTS, ESTERS & DERIVATIVES 1
ACRYLIC RESINS 1
ACRYLONITRILE-BUTADIENE-STYRENE RESINS 1
ADHESIVE NES 1
ADHESIVE, ANIMAL BASE 1

ADHESIVE, RUBBER BASE 1
ADHESIVE, SYNTHETIC RESIN BASE 1
AGRICULTURAL MACHINERY, EQUIPMENT & PARTS NES 1
AIR AND GAS COMPRESSORS NES 1
AIR AND GAS COMPRESSORS, STATIONARY 1

AIR CONDITIONING AND REFRIG EQUIP & PTS NES 2
AIR CONDITIONING UNITS NES 2
AIRCRAFT ASSEMBLIES, EQUIPMENT AND PARTS 2
AIRCRAFT ENGINES NES 2
AIRCRAFT ENGINES, JET PROPULSION TYPE 2

AIRCRAFT NES 2
ALARM AND SIGNAL SYSTEMS AND PARTS NES 2
ALCOHOLS AND THEIR DERIVATIVES NES 3
ALE, LAGER, PORTER AND STOUT 3
ALFALFA SEED 3

ALUMINUM AND ALUMINUM ALLOY FABD MATERIAL NES 3
ALUMINUM CASTINGS 3
ALUMINUM PIGS/INGOTS ETC & EXTRUDED WIRE BARS 3
ALUMINUM WIRE AND CABLE, NOT INSULATED 3
AMIDE FUNCTION COMPOUNDS 3

AMINE FUNCTION COMPOUNDS NES 3
AMMETERS/VOLTMETERS/OHMMETERS/PANEL TYPE & PTS 3
AMMONIA 4
AMMONIUM SULPHATE 4
AMMUNITION PARTS 4

ANALGESICS, NARCOTIC TYPE, IN DOSAGE, NES 4
ANALGESICS, NON-NARC TYPE,IN DOSAGE,HUMAN USE 4
ANCHORS FOR VESSELS 4
ANESTHETICS, GENERAL, IN DOSAGE, HUMAN USE 4
ANTACIDS, IN DOSAGE, HUMAN USE 4

ANTIBIOTICS NES, IN DOSAGE, HUMAN USE 4
ANTIBIOTICS, IN DOSAGE, VETERINARY USE 4
ANTICOAGULANTS, IN DOSAGE, HUMAN USE 4
ANTIDIARRHEALS, IN DOSAGE, HUMAN USE 4
ANTIHYPERTENSIVES, IN DOSAGE, HUMAN USE 4

ANTIHYPOTENSIVES, IN DOSAGE, HUMAN USE 4
ANTIINFECTIVES, IN DOSAGE, HUMAN USE 4
ANTISEPTICS, MEDICINAL, IN RETAIL PACKAGES 4
APPLES, CANNED, INCLUDING APPLESAUCE 4
APRICOTS, CANNED 4

ARTIFICIAL LIMBS /PROSTHETIC/ AND PARTS 4
ASBESTOS & ASBESTOS-CEMENT BLDG MATERIALS NES 4
ASPARAGUS, CANNED 4
AUTO/AIRCRAFT MTCE/SERV/REPAIR EQUIP &PTS NES 4
AUTOMOTIVE CHEMICALS NES 5

AUXILIARY ELEC EQUIP FOR I/C ENGINES NES 5
AVIATION GASOLINE 5
AVIATION TURBINE FUEL 5
BABY CHICKS 5
BACK HOE ATTACHMENT UNITS AND PARTS 5

BAKERY MACHINERY AND PARTS 5
BAKERY PRODUCTS NES 5
BANDAGE/SURGICAL GAUZE/ABSORBENT COT/DRESSING 5
BARS, ALLOY STEEL, HOT ROLLED, NES 5
BARS, CARBON STEEL, HOT ROLLED NES 5

BARS, CARBON STEEL, HOT ROLLED, ROUNDS NES 5
BARS, CARBON STEEL,COLD DRAWN OR COLD FIN NES 5
BASIC HARDWARE NES 5
BATH TUBS 5
BATTERIES NES 5

BATTS, BATTING AND WADDING NES 6
BEANS, BAKED, CANNED 6
BEANS, CANNED NES 6
BEANS, SEED 6
BEEF AND VEAL, CANNED NES 6

BEEF, CURED 6
BEEF, FRESH OR CHILLED, BONELESS 6
BEEF, FRESH OR FROZEN NES 6
BEEF, FROZEN, BONELESS 6
BENT GRASS SEED 6

BENTONITE 6
BENZOL /BENZENE/ 6
BEVERAGE INDUSTRIES MACHINERY AND PARTS 6
BEVERAGES, FERMENTED ALCOHOLIC 6
BINDERS GRAIN,HARVESTER ENSILAGE/FORAGE & PTS 6

BINOCULARS AND PARTS, EXCEPT LENSES 6
BISCUITS AND COOKIES, EXCEPT SODA BISCUITS 6
BITUMINOUS MIXING AND PAVING EQUIPMENT, & PTS 6
BLEACHING/DYEING/PRINTING & FIN MACHY, & PTS 6
BLENDED FRUIT JUICES, NOT CONCENTRATED 7

BLOOD AND BLOOD FRACTIONS 7
BLOOD AND BLOOD FRACTIONS, VETERINARY USE 7
BLOOD HAND, ANALYSING, COLL & PROCESSING SUP 7
BLOOMS, BILLETS AND SLABS, ALLOY STEEL 7
BLOOMS, BILLETS AND SLABS, CARBON STEEL 7

BLUEPRINTS, PLANS AND DESIGNS 7
BOOTS AND SHOES, DRESS & CASUAL, M/B, LEATHER 7
BOOTS AND SHOES, DRESS AND CASUAL, M/B NES 7
BOOTS AND SHOES, WORK, MEN'S & BOYS', LEATHER 7
BOOTS AND SHOES, WORK, MEN'S AND BOYS' NES 7

BORING MACHINES, METALWORKING, AND PARTS 7
BOTTLE MACH TO WASH/FILL/CAP/SEAL/LABEL & PTS 7
BOXBOARD, VAT-LINED AND/OR PATENT COATED 7
BOXES/CARTON,SHIP/DISTRIB,FIBRE/PAPERBD & PTS 8
BREAKFAST CEREAL FOODS 8

BRISTOLS NES 8
BROAD COATED FABRICS NES 8
BROAD WOVEN FABRICS OF ONE MAN-MADE FIBRE NES 8
BROAD WOVEN FABRICS, COTTON, BLEACHED NES 8
BROAD WOVEN FABRICS, COTTON, COLOURED NES 8

BROAD WOVEN FABRICS, COTTON, UNBLEACHED NES 8
BUILDERS, HARDWARE NES 8
BULLDOZING, ANGLE-DOZING & SIM EQUIP, & PTS 8
CALCIUM CHLORIDE 8
CALCIUM PHOSPHATES 8

CAMERA ACCESSORIES NES 8
CAMERAS, STILL PICTURE 8
CAMP, LAWN AND VERANDA FURNITURE 8
CAN WASHING/FILLING/CLOSING/LABEL MACH & PTS 8
CARDIAC AGENTS, IN DOSAGE, HUMAN USE 8

CARROTS, CANNED 8
CATHETERS, BOUGIES, DRAINS AND SONDES 8
CATTLE HIDES, RAW 8
CATTLE NES 8
CAULKING, SEALING & SOUND DEADENING COMPOUNDS 8

CELLULOSE PLASTICS NES 9
CELLULOSICS-COATED FABRICS 9
CEMENT AND CONCRETE BASIC PRODUCTS NES 9
CEMENT NES 9
CEREAL GRAIN PRODUCTS NES 9

CEREAL PRODUCTS, OTHER 9
CEREALS, MILLED NES 9
CEREALS, UNMILLED NES 9
CHAIN NES, INCL COIL CHAIN LINK/SHACKLE/FTTGS 9
CHAIN SAWS 9

CHARGE PREPARATIONS FOR FIRE EXTINGUISHERS 10
CHARTS AND MAPS 10
CHEESE NES 10
CHEESE, CAMEMBERT 10
CHEESE, GOUDA 10

CHEESE, GRUYERE PROCESS 10
CHEESE, PROVOLONE 10
CHEMICAL AND PHARM PRODS IND MACHY, EQUIP/PTS 10
CHEMICALLY MODIFIED OILS, FATS AND WAXES 10
CHINA CLAY, GROUND OR UNGROUND 10

CHIP/SCRGS BOARD, PLAIN/COL, FOLDING/NON FOLD 10
CHLORATES AND PERCHLORATES 10
CHLORIDES AND OXYCHLORIDES NES 11
CHLORINE 11
CHLORITES AND HYPOCHLORITES NES 11

CHLOROFLUOROHYDROCARBONS 11
CHOCOLATE CONFECTIONERY NES 11
CHOCOLATES, PACKAGED 11
CHOLINE ITS SALTS AND DERIVATIVES 11
CHRONOMETERS & SPECIAL TIME RECORDERS, & PTS 11

CIGARETTES 11
CIGARS AND SIMILAR PRODUCTS 11
CIRCUIT BREAKERS AND PARTS 11
CITRIC ACID, ITS SALTS, ESTERS & DERIVATIVES 11
CITRUS FRUITS, CND, INCL MIX OF CITRUS FRUITS 11

CIVIL AIRCRAFT, FIXED WING, 2 ENGINES OR LESS 11
CLAY & CONCRETE PRODS IND MACHY, & PTS NES 11
CLEANING EQUIPMENT, ELECTRIC NES 11
CLOVER SEED 11

PART IV

COMPANY LISTING BY PROVINCE

NOTE TO COMPANY LISTING BY PROVINCE

This section lists the addresses of company R&D unit offices in alphabetical order by province and city. Provinces are shown in geographical order from Newfoundland to British Columbia.

The following is a sample with an explanation of the items listed.

```
1____ ONTARIO

2____ TORONTO

3____DAVIS CONTROLS LTD.                   416-233-2742 FAX: 416-233-2643 _______6
4______  UNIT: DAVIS CONTROLS-RESEARCH DIVISION
5______  P.O. BOX 160,ISLINGTON TORONTO,M9A4X2
 ______GASTECH CORPORATION
         4251 DUNDAS STREET WEST,TORONTO ONTARIO,M8X1Y3
```

(1) Province
(2) City where the R&D unit is located
(3) Company name
(4) Company R&D unit name if different than company name
(5) Address
(6) Telephone and facsimile number

COMPANY LISTING BY TECHNOLOGIES

NOTE TO COMPANY LISTING BY TECHNOLOGIES

This section is produced by technology in alphabetical sequence with the firms listed alphabetically within each technology. Also included within this section is a list of technologies currently being captured.

The following is a sample with an explanation of the items listed.

```
1____ INSTRUMENTATION/CONTROLS

2______ DAVIS CONTROLS LTD.                   416-233-2742 FAX: 416-233-2643 _______4
3______   P.O. BOX 160,ISLINGTON ONTARIO,M9A4X2
 _______GASTECH CORPORATION
          4251 DUNDAS STREET WEST,TORONTO ONTARIO,M8X1Y3
```

(1) Technology within which R&D is performed
(2) Company name (Individual units are not listed)
(3) Address
(4) Telephone and facsimile number

TECHNOLOGY LIST

ADHESIVES
AGRICULTURE/FORESTRY/FISHERIES
ARTIFICIAL INTELLIGENCE/EXPERT SYSTEM
BIOLOGY/GENETICS
BIOTECHNOLOGY
CAD/CAM,ROBOTICS,OTHER ADVANCED MANUFACTURING
CERAMICS
CHEMICALS
COLD CLIMATE RESEARCH
COMMUNICATIONS
COMPOSITES
COMPUTER HARDWARE
ELECTRICAL PRODUCTS
ENERY/POWER
ENVIRONMENTAL ANALYSIS/TREATMENT
FOOD/BEVERAGES
GEOLOGY/GEOPHYSICS/SURVEYS
INDUSTRIAL MACHINERY
INSTRUMENTATION/CONTROLS
LASERS
MEDICAL DEVICES
METALS/ALLOYS
MICRO-ELECTRONICS
OPTO-ELECTRONICS
PAINTS/COATINGS/SEALANTS
PETROLEUM AND NATURAL GAS
PHARMACUETICALS
PHOTOVOLTAICS
PLASTICS/POLYMERS
PRODUCTION PROCESSES
RADAR/SONAR/ULTRASOUND
RECYCLING SERVICES/PRODUCTS
REMOTE SENSING/SIGNAL PROCESSING
SOFTWARE
SUPERCONDUCTIVITY
TRANSPORTATION

PART VI

LIST OF FEDERAL GOVERNMENT

SCIENTIFIC & TECHNOLOGICAL ESTABLISHMENTS

PERFORMING ESTABLISHMENTS

NEWFOUNDLAND

AGRICULTURE CANADA

Research Station: St. John's

P.O. Box 7098, St. John's, Newfoundland, A1E 3Y3
Contact: Mr. K. Proudfoot, Director, Telephone: (709) 772-4619
Personnel: 32
Activities:

The St. John's research station conducts research into production of forage crops on mineral soils. There is also a small program on horticultural crops research.

ENVIRONMENT CANADA

Newfoundland District Laboratory

P.O. Box 5037, St. John's, Newfoundland, A1C 5V3
Contact: E.J. Jennex, Chief, Resource Planning and Analysis, Telephone: (902) 426-1899
Personnel: 10
Activities:

Promotion of conservation and protection of inland waters, lands and wildlife, and development of preventive or corrective measures for maintaining and improving environmental quality.

Facilities:

Analytical chemistry equipment, including ultraviolet and fluoresence spectrometers, an ion chromatograph and analyzers for carbon and mercury.

FISHERIES AND OCEANS

Science Branch - Newfoundland Region

Northwest Atlantic Fisheries Centre, P.O. Box 5667, St. John's, Newfoundland, A1C 5X1
Contact: Mr. M.C. Mercer, Regional Science Director, Telephone: (709) 772-2027
Personnel: 225 in natural science.
Activities:

The Science Branch, Newfoundland Region is responsible for the Departmental biological sciences, physical and chemical sciences, and hydrographic programs in the area extending from Cabot Strait eastwards to the Flemish Cap and northwards to the continental shelves off Baffin Island. These investigations involve a highly diverse and multidisciplinary research program involving Arctic, sub-Arctic and temperate marine and freshwater science.

Research is conducted into the life history, ecology and population dynamics of major groundfish, pelagic, marine mammal, freshwater and anadromous species in the Newfoundland-Labrador area. Additional activities centre on enhancement and aquaculture science, fish health and parasitology, habitat research and assessment, hydroacoustics, physical oceanography, coastal hydrography (navigational charts) and toxicology/contaminants (largely hydrocarbons and pesticides).

Science Branch researchers work closely with members of the Canadian fishing industry, university community and private sector.

Facilities:

Offshore research is supported by the GADUS ATLANTICA (an 80m converted stern trawler on long-term charter) and the WILFRED TEMPLEMAN (50M) launched in 1982 and incorporating the most innovative and modern fishing, sampling, navigational, electronic and computer research aids. Two small stern trawlers are used for inshore studies, the SHAMOOK (23m) and MARINUS (20m). Other vessels are chartered as required. For hydrographic work, the Branch utilizes the 35m MAXWELL which is equipped with two state-of-the-art survey launches.

The Centre provides spacious marine and freshwater aquaria, a stream tank, toxicity laboratories, wet labs, biological samples museum and other specialized facilities. Of particular significance is the open seawater system of approximately 60,000 litres capacity. Electronic, vessel, EDP, oceanographic, diving, marine technology and library support is available.

FORESTRY CANADA

Newfoundland Forestry Research Centre

P.O. Box 6028, St. John's, Newfoundland, A1C 5X8
Contact: R.S. Van Nostrand, Program Director, Forest Resources, Telephone: (709) 772-4682
Personnel: 70
Activities:

The centre conducts most of the forest research in the Province. Its work is directed primarily towards satisfying the requirements of the Provincial Government and the Newfoundland forest industries. Its objective is to provide scientific, technological and economic information and services required for the improvement, protection and efficient utilization of the forest resources.

Facilities:

VAX 8200 computer with VMS Operating System; TRIM system number 8516 - ARC/INFO on IBM PC System - Tree Ring increment measurer; Histomatic Tissue Processor Model 166 MP and tissue embedding centre; PE-2380 Atomic Absorption Spectrophotometer; Metrohm 636 Titroprocessor; Technicon II Autoanalyzer DP 1000 Data Processor; Dionex Autoin System 12.

NATIONAL RESEARCH COUNCIL OF CANADA

Institute for Marine Dynamics

Kerwin Place, P.O. Box 12093, Station A, St. John's, Newfoundland, A1B 3T5
Contact: N.E. Jeffrey, Director, Telephone: (709) 772-2469
Personnel: 56
Activities:

The Institute for Marine Dynamics (IMD) devises testing programs for ships and offshore structures, in response to the need for a clear understanding of the conditions found along Canada's long coastline and extensive inland waterways. The Institute's facilities include a towing tank, an ice tank, a cavitation tunnel, an advanced seakeeping basin, and a computer-controlled milling machine. This unique grouping of facilities makes IMD one of the most important research institutes for marine hydrodynamics in the world. IMD is active in the design of vessels, model construction, and performance trials, including "scaling-up" of results to be applied to full-sized ships. Operation in ice-covered water is a major research interest. Descriptions of the major research groups follow.

Arctic Vessel Research Section

Kerwin Place, P.O. Box 12093, Station A, St. John's, Newfoundland, A1B 3T5
Contact: S.J. Jones, Telephone: (709) 772-5403

Activities:

The group carries out research on the interaction of ice with ships and offshore structures. Work includes use of a refrigerated ice-tank facility to study hull-ice interactions and to conduct basic investigations into the properties of model and full-scale ice, the performance of ice-transiting ships, and the effect of ice on offshore structures. The section also carries out full-scale trials for validation of model and theoretical predictions.

Hydrodynamics Research Section

Kerwin Place, P.O. Box 12093, Station A, St. John's, Newfoundland, A1B 3T5
Contact: D.C. Murdey, Telephone: (709) 772-2481
Activities:

The section performs research on the hydrodynamics of ships and offshore structures. It supports industry and other agencies in the solution of problems associated with the prediction of ship powering performance, stability, seakeeping and manoeuvring qualities, and the behaviour of offshore structures, particularly in extreme environmental conditions. Full-scale trials are also conducted.

Research and Development Services Section

Kerwin Place, P.O. Box 12093, Station A, St. John's, Newfoundland, A1B 3T5
Contact: M.B. Thorne, Telephone: (709) 772-2472
Activities:

The section provides technical support to the IMD research sections. Activities include operation, development, and research in production techniques as required to use the National Facilities cost-effectively.

NOVA SCOTIA

AGRICULTURE CANADA

Experimental Farm: Nappan

Nappan, Nova Scotia, B0L 1C0
Contact: Dr. P. Burgess, Superintendent, Telephone: (902) 667-3727
Personnel: 30
Activities:

The management of livestock and their related feed crop requirements are studied extensively at the Nappan Experimental Farm. Emphasis is placed on the beef production systems and there is a small program of swine for the Atlantic provinces.

Research Station: Kentville

Kentville, Nova Scotia, B4N 1J5
Contact: Dr. G.M. Weaver, Director, Telephone: (902) 678-2171
Personnel: 105
Activities:

The Kentville research station has the Atlantic Regional responsibilities for tree fruits, vegetables, berries,and ornamentals research. Research is also being conducted into the storage and processing needs of the food industry for the Atlantic Region. An industry poultry program in partnership with the Nova Scotia Agricultural College is also being conducted.

ENERGY, MINES AND RESOURCES CANADA

Cape Breton Coal Research Laboratory

201 George Street, Sydney, Nova Scotia, B1P 1J3
Contact: D.B. Stewart, Laboratory Manager, Telephone: (403) 987-8238
Personnel: 14
Activities:

The Cape Breton Coal Research Laboratory was established as part of CANMET's continuing program in response to a recommendation of the Elfstrom Commisson's report on the multiple fatalities in No. 26 Colliery at Glace Bay, Nova Scotia. The objectives of the R&D program are the establishment of safe, efficient mining techniques for local use, to develop a program for effective underground explosion control and to assist in the development and implementation of new techniques underground. The laboratory is moving towards its full complement. A number of programs in underground strata-control and in mine environmental (ventilation, dust and methane) areas are underway and have been coordinated with Cape Breton Development Corporation. All three laboratories (Cape Breton, Edmonton and Calgary) have a common emphasis on field oriented R&D programs that are frequently carried out in conjunction with industry at the industrial partner's operating mine or coal preparation plant. Support from the divisional laboratory bench activities and, on occasion, from other divisions of CANMET contribute to the success of the field activities.

Facilities:

Open Jet Wind Tunnel for Anemometer Calibration; Dasella Gravimetric Dust Sampler; Automatic Surface Grinder with Magnetic Chuck.

Atlantic Geoscience Centre

P.O. Box 1006, Dartmouth, Nova Scotia, B2Y 4A2
Contact: D.I. Ross, Telephone: (902) 426-2367
Personnel: 121
Activities:
The Atlantic Geoscience Centre is located at the Bedford Institute of Oceanography. Research is concerned with geological and

geophysical studies of the continental margins of Eastern and Arctic Canada and contiguous ocean basins; geology of the sedimentary basins along the eastern Canadian seaboard including Bay of Fundy, Gulf of St. Lawrence, Hudson Bay, Baffin Bay and the entire adjacent Atlantic shelf; marine geological and geophysical mapping; experimental and theoretical studies on the development of continental margins; petroleum geology; coal petrology; surficial and environmental marine geology including quaternary stratigraphy and glacial history, seabed stability and marine geotechnics, sedimentology of coastal and marine sedimentary environments, inorganic and organic geochemistry. Technology development, e.g., ocean bottom seismometers. Developments in management of geological, paleontologial and geophysical data. Topics of particular current interest include geophysical modelling of the development of sedimentary basins; studies of seabed stability on the continental shelf and slope seismicity of passive margins.

Facilities:

Marine geophysical equipment including: high resolution seismic profiling, digital seismic reflection, shipboard gravimeter, sidescan sonar, seabed bedrock drilling, sediment long coring systems, precision electronic digital navigation system, underwater photography, ocean bottom seismometers. Specialized laboratory equipment including: sediment size analysis, geochemistry trace element, electron microscopy and image analysis system, video studio, geomechanical laboratory, x-ray diffractometer, video scan x-radiograph; geological survey and data processing equipment including mini-computers, microprocessors and access to Bedford Institute of Oceanography mainframe; equipment for geochemistry and paleontology labs, instrument and electronic shops.

ENVIRONMENT CANADA

Atmospheric Environmental Service: Atlantic Region

1496 Bedford Highway, 6th Floor, Bedford, Nova Scotia, B4A 1E5
Contact: L. Racine, Financial Planning, Telephone: (416) 739-4172.
Personnel: 231
Activities:

Provision of meteorological services to the provinces of New Brunswick, Nova Scotia, Newfoundland and Prince Edward Island.

Facilities:

Weather radar; satellite receiving equipment; upper atmospheric measurement equipment; automatic weather stations; other meteorological equipment; EDP equipment.

Laboratory Division, Air and Water Branch, Environmental Protection Service

P.O. Box 1006, Dartmouth, Nova Scotia, B2Y 4A2
Contact: E.J. Jennex, Regional Financial Officer, Telephone: (902) 426-1899
Personnel: 14
Activities:

Promotion of conservation and protection of inland waters, land and wildlife, and development of preventive or corrective measures for maintaining and improving environmental quality.

Facilities:

2 A.A. Spectrophotometers; 6 Gas Chromatographs; Infrared Spectrophotometer; Fluorescence Spectrophotometer; 2 U/V Visible Spectrophotometers; ICAP Emission Spectrophotometer; G.C. Mass Spectrophotometer; Ion Chromatograph.

Inland Waters Directorate - Atlantic Region

45 Alderney Drive, Dartmouth, Nova Scotia, B2Y 2N6
Contact: S. Fenety, Director, Telephone: (902) 426-6050
Personnel: 83
Activities:

Water management, water data gathering, water investigations, socio-economic studies.

Parks - Conservation of Historic Resources

1532 Birmingham Street, Halifax, Nova Scotia B3J 2J7
Contact: Ed Paterson, Chief, Telephone: (902) 426-7448
Personnel: 11
Activities:

This group carries out the preservation, conservation and scientific restoration of hand-made or manufactured objects, ranging from native peoples, to early settlers, to recent inhabitants. Social, historic, military and art objects are included. Studies are undertaken on the processes of deterioration. These include processes related to : soil condition and other conditions of an exposed archaeological site; environmental conditions above ground and physical properties of the materials of which the objects are made. The methods of conservation include macroscopic and microscopic examination, chemical and physical testing, the work of skilled craftsmen, electrolysis of different forms and types (acids, bases and other reagents), and other modern methods of conservation. Work is carried out both in laboratories and in the field.

Special equipment:

An operating microscope is used for microscopic examination and for carrying out delicate and minute repair of objects. In order to measure environmental conditions, use is made of rotation psychrometers, ultraviolet detectors and ultrasonics equipment.

FISHERIES AND OCEANS

Bedford Institute of Oceanography

P.O. Box 1006, Dartmouth, Nova Scotia, B2Y 4A2
Contact: H.B. Nicholls, Head - Marine Assessment and Liaison Division, Telephone: (902) 426-3246
Personnel: 482 in DFO Science.
Activities:

The Bedford Institute of Oceanography (BIO), owned and operated by the Department of Fisheries and Oceans, is a multi-departmental, multi-disciplinary institute which undertakes a full spectrum of ocean research and service functions for the East Coast and Arctic. It also plays a significant role in international marine science activities. Client sectors include marine transportation, energy, fisheries, environment, industrial development and recreation. The DFO components at BIO include components of the regional Physical and Chemical Sciences Branch (physical and chemical oceanography and ocean instrumentation), the Biological Sciences Branch (fisheries science, biological oceanograph and environmental studies) and all of the regional Canadian Hydrographic Service (chart production and navigation).

Facilities:

In addition to a fleet of ships ranging from ocean-going vessels with world-wide capabilities to smaller inshore launches, BIO has much special equipment. Such equipment includes prototypes (in-house designs), ranging from satellite-linked data collection packages and navigation systems to sensitive advanced sonar for study of marine communities.

Fisheries Development Branch

1649 Hollis Street, 6th Floor, Halifax, Nova Scotia, B3J 2S7
Contact: Mr. David W. Lemon, Chief - Special Projects, F.D.B, Scotia-Fundy Region, Telephone: (902) 426-2328
Personnel: 18
Activities:

Atlantic fisheries technology activities are coordinated from Ottawa HQ and implemented from four regional offices located in St. John's (Newfoundland Region), Halifax (Scotia-Fundy Region), Moncton (Gulf Region), and Qu{bec City (Qu{bec Region). All work is carried out through contracts and joint arrangements. The main thrust of the program includes applied industrial research and development of fisheries technology directed at the Atlantic commercial fishing industry. The four main objectives include: expansion of the commercial resource base, reduction in the cost of harvesting, processing, handling, and storage, increased value added to the resources, more conservation-oriented harvesting of the resource.

Biological Sciences Branch, Halifax Component, Scotia Fundy Region

P.O. Box 550, Halifax, Nova Scotia, B3J 2S7
Contact: Dr. J.D. Pringle, Chief, Benthic Fisheries and Aquaculture Division, Telephone: (902) 426-6138
Mr. J.A. Ritter, Chief, Freshwater and Anadromous Division, Telephone: (902) 426-3573.
Personnel: 133
Activities:

Research programs focus on the life history, ecology, population dynamics, species-interactions and stock assessments of salmon, invertebrates and marine plant species of the region. Studies in support of the aquaculture industry are conducted on fish and shellfish with emphasis on disease, nutrition, growth and physiology. Other studies are conducted on the sub-lethal effects of pollutants on commercially important finfish and invertebrates and their environment. Field-oriented research on anadromous and freshwater fishes (particularly Atlantic salmon) are conducted on population parameters, growth, harvest and spawning success. Salmon enhancement programs, involving biological investigations, engineering technology and fish culture operations, are conducted to expand and rehabilitate stocks in selected rivers and lakes. In the area of fish habitat, research is conducted on the impact of pollutants and other environmental factors (including acidification) on fish and the ecosystems they depend on, especially in freshwater.

Facilities:

In addition to a full range of laboratory equipment, including seawater facilities for fisheries research, the Branch manages a network of fish hatcheries in Nova Scotia and New Brunswick for enhancement of salmon populations and for aquaculture technology development.

NATIONAL DEFENCE

Defence Research Establishment: Atlantic

P.O. Box 1012, Dartmouth, Nova Scotia, B2Y 3Z7
Contact: A. Patrick, Program Control Officer, Telephone: (613) 996-5912
Personnel: 209.
Activities:

Defence Research Establishment: Atlantic (DREA), located in Dartmouth, Nova Scotia, is a Maritime laboratory concerned with research related to the problems of anti-submarine defence in the North Atlantic including underwater acoustics, signal processing, transducer research, hydronautics and materials research.

Facilities:

Research Vessel - CFAV Quest.

NATIONAL RESEARCH COUNCIL OF CANADA

Atlantic Research Laboratory

1411 Oxford Street, Halifax, Nova Scotia, B3H 3Z1
Contact: R.A. Foxall, Director, Telephone: (902) 426-8278
Personnel: 80
Activities:

The Atlantic Research Laboratory (ARL) performs research and development mainly in the marine sciences and in industrial materials and processes relevant to the economy of the Atlantic provinces. The marine-related research includes studies of the biology and biochemistry of organisms, particularly marine plants, and the development of marine analytical chemistry methodologies and standards. Research and development on materials and processes focus primarily on the development and use of specialized ceramics in industry. Other research in the laboratory includes studies of the ecology and physiology of fungi with emphasis on their role in agricultural systems. Descriptions of major laboratory groups are listed below.

Analytical Methods and Services Section

1411 Oxford Street, Halifax, Nova Scotia, B3H 3Z1
Contact: W.D. Jamieson, Telephone: (902) 426-8279
Activities:

The section develops and maintains advanced capabilities in the application of chemical or physical methods to the characterization of materials. These capabilities support internal projects and respond to external industrial or scientific needs. A major goal is to improve Canadian capabilities in marine analytical chemistry. Under the Marine Analytical Chemistry Standards Program, activities at ARL and the Division of Chemistry in Ottawa are coordinated to develop reference materials, standards, and methods in order that more accurate, comparable, analytical chemistry data can be obtained for marine materials or biota. The section's areas of special analytical capability include infrared spectroscopy, scanning electron microscopy (including electron microprobe analysis), x-ray crystallography, atomic absorption spectroscopy, inductively coupled plasma atomic emission spectroscopy, and organic mass spectrometry (including high resolution and MS/MS capabilities, and analysis using directly coupled gas chromatography, liquid chromatography, or pyrolysis equipment).

Biological Chemistry Section

1411 Oxford Street, Halifax, Nova Scotia, B3H 3Z1
Contact: A.G. McInnes, Telephone: (902) 426-8262
Activities:

The section is studying the biological role of silicon in marine organisms with particular emphasis on the biomineralization (silica shell formation) process in diatoms, which are an essential component of the marine food web. Knowledge of the mechanisms of biomineralization and the unique physical properties conferred by the association of the organic and inorganic components of biominerals has important implications in material science and medicine. The section depends heavily on its nuclear magnetic resonance (NMR) facilities which cover a range of nuclei and field strength, and has access to the NMR spectrometers at the Atlantic Region Magnetic Resonance Centre, Dalhousie University.

Industrial Liaison Office

1411 Oxford Street, Halifax, Nova Scotia, B3H 3Z1
Contact: M. MacKinnon, Telephone: (902) 426-8509
Activities:

ARL's Industrial Liaison Office helps companies access the expertise within the laboratory and the National Research Council of Canada. In addition to maintaining close contact with the Technology Advisory Network of NRC's Industrial Research Assistance Program (IRAP), the Industrial Liaison Office provides a linkage for companies to NRC divisions and, where appropriate, to other government and commercial laboratories, in order to obtain the necessary technical advice that would benefit the client. The office also assists the Department of Regional Industrial Expansion (DRIE) in obtaining technical assessments of various proposals submitted to that department.

Industrial Materials and Processes Section

1411 Oxford Street, Halifax, Nova Scotia, B3H 3Z1
Contact: S.G. Whiteway, Telephone: (902) 426-8269
Activities:

The section carries out research on materials and processes of industrial importance in Eastern Canada. The materials of particular interest are those important for advanced structural ceramics, such as aluminum and zirconium oxides as well as various carbides and nitrides. The processes are those required to fabricate ceramic powders into prototypical industrial components. The section has facilities for physico-chemical measurements on solids, liquids, and gases at temperatures of up to 1700 degrees C. These include induction generators, high-temperature furnaces, mass spectrometers, a Mossbauer spectrometer, coal preparation and pyrolysis equipment, isostatic presses, and a variety of modern analytical instruments.

Marine Biosciences Section

1411 Oxford Street, Halifax, Nova Scotia, B3H 3Z1
Contact: J.S. Craigie, Telephone: (902) 426-8287
Activities:

The objectives of the section are to obtain knowledge about the fundamental life processes and chemistry of coastal marine organisms, especially algae, and to promote the application of Canadian expertise in marine biology to develop marine resources and aquaculture. The section's program consists of four components: physiology and biochemistry; systematics and life histories; algal genetics; marine natural products.

Microbiology Section

1411 Oxford Street, Halifax, Nova Scotia, B3H 3Z1
Contact: A. Taylor, Telephone: (902) 426-8289
Activities:

The section examines the ecology, physiology, and chemistry of fungi with particular reference to their role in agricultural systems. The emphasis is on mycotoxins and symbiotic associations with other plants.

PRINCE EDWARD ISLAND

AGRICULTURE CANADA

Research Station: Charlottetown

P.O. Box 1210, Charlottetown, Prince Edward Island, C1A 7M8
Contact: Dr. L.B. Macleod, Director, Telephone: (902) 566-6816
Personnel: 103
Activities:

The Charlottetown research station is the centre in the Atlantic Region for research on cereal crops and forages. It also has a dairy-beef program; a potato breeding program; and a soil-crop management program.
Facilities:

Baroscope and accessories; Data loggers and accessories.

NEW BRUNSWICK

AGRICULTURE CANADA

Health of Animals Laboratory: Sackville

P.O. Box 1410, Sackville, New Brunswick, E0A 3C0
Contact: Vicki Lauzon, Financial Officer, Telephone: (613) 995-5433
Personnel: 20
Activities:

The laboratory is involved in bacteriological, parasitological, histopathological and virological investigations into diseases of sheep (particularly respiratory diseases), trichinosis in swine and other animals; and cysticercasis in cattle. The diagnostic functions are in support of regulatory agencies under the authority of the Meat Inspection Act and the Animal and Diseases and Protection Act.

Facilities:

Titertek Multiscan MC (ELISA plate reader); Titertek Autodrop (Microplate dispenser); Titertek Microplate Washer (120); Hamilton Microlab 1000 (Digital Diluter).

Research Station: Fredericton

850 Lincoln Road, P.O. Box 20280, Fredericton, New Brunswick, E3B 4Z7
Contact: Dr. D.K. McBeath, Telephone: (506) 452-3260
Personnel: 115
Activities:

The Fredericton research station has the national responsibility for the potato breeding program. In addition, it is responsible for forage dairy research in Atlantic Canada, the soils conservation program, the potato pest management and engineering program, and a small horticultural program.

Facilities:

Inverters for electronic scales; IBM-PC computer, monitor; pressure transducers; data loggers and recorder; tensimeter; electronic, analytical balance; carbon dioxide and oxygen analysts; extender chassis (for the data logger); humidity probes; load cells.

Senator Herve J. Michaud Experimental Farm

P.O. Box 667, Buctouche, New Brunswick, E0A 1G0
Contact: Dr. G. Rousselle, Superintendent, Telephone: (506) 743-2464
Personnel: 11
Activities:

This experimental farm maintains a horticultural research program.

ENVIRONMENT CANADA

Water Quality Branch

Federal Building, Main Street, Moncton, N.B., E1C 8N6
Contact: E.J. Jennex, Chief, Resource Planning and Analysis, Telephone: (902) 426-1899
Personnel: 24
Activities:
Promotion of conservation and protection of inland waters, lands and wildlife, and development of preventive or corrective measures

for maintaining and improving environmental quality.

Facilities:

A wide range of analytic equipment for both organic and inorganic chemistry.

FISHERIES AND OCEANS

St. Andrew's Biological Station

Brandy Cove Road, St. Andrew's, New Brunswick, E0G 1X1
Contact: Dr. R. Cook, Director, Telephone: (506) 529-8854
Personnel: 81
Activities:

The Biological Station is located on Passamaquoddy Bay at the outer end of the Bay of Fundy. Research is divided into four broad categories. The first two cover the marine vertebrate and invertebrate fisheries. Research is conducted on the biology and management of fisheries resources through studies of life history, ecology, behaviour, population dynamics and stock assessment. The third category includes studies of the impact on aquatic ecosystems of human activities, including the sublethal effects of pollutants on commercially important fish and invertebrates, and their environment. A recent emphasis in this area has been the impact of the rapidly developing aquaculture industry on the marine environment. The fourth category involves the development of aquaculture techniques, including grow-out of marine fish and invertebrates. Associated programs include endocrinology, genetics and physiology in support of the existing aquaculture industry. Research programs are also undertaken in collaboration with he Huntsman Marine Laboratory and the North Atlantic Salmon Research Centre.

Facilities:

The Biological Station is well equipped for all biological studies involving live material, especially marine fish. Two research vessels (21 metre J.L. HART and 15 metre PANDALUS) are stationed here and can conduct a variety of inshore resources survey work. The Salmon Demonstration and Development Farm, situated close by in Lime Kiln Bay, is designed to improve fish farming techniques and to transfer this technology to the salmon aquaculture industry.

Science Branch - Gulf Region

P.O. Box 5030, 343 Archibald Street, Moncton, New Brunswick, E1C 9B6
Contact: Mr. J.S. Loch, Regional Science Director, Telephone: (506) 857-6257
Personnel: 97
Activities:

Research focuses both on marine and freshwater fisheries. Cooperative studies are carried out with Maritime Universities and other government laboratories. Programs underway include: population biology and stock status studies on estuarine, marine fish and invertebrate populations; marine fish and invertebrate parasites; culture of marine mulluscs and salmonids; studies on the impact of man's activities on marine and freshwater ecosystems; protection of habitats critical to the life cycle of important species. Field stations are located in Nova Scotia, Prince Edward Island, Newfoundland and New Brunswick - both at freshwater and marine sites.

Facilities:

Four fish hatcheries (Atlantic salmon) at Newcastle (New Brunswick), Charlo (New Brunswick), Cardigan (Prince Edward Island), and Margaree Forks (Nova Scotia).

FORESTRY CANADA

Maritimes Forest Research Centre

P.O. Box 4000, Fredericton, New Brunswick, E3B 5P7
Contact: Dr. Thomas E. Sterner, Program Director (Research), Telephone: (506) 452-3507
Personnel: 179.
Activities:

The establishment carries on a broad program of research in all forestry and forestry-related disciplines, seeking solutions for the major forest management problems in the Maritimes. There are two active sub-programs, one dealing primarily with forest research and technical services and one with forestry development agreements. Research projects address several major problem areas including forest renewal, acid rain, forest productivity, forest tree genetics, spruce budworm, and other insects and diseases. The overall aim of the centre's program is to solve major forestry problems and develop more efficient management techniques for use by forest management agencies in the Maritime Provinces.

Facilities:

ICP spectrometer with plasma and therm source; acid rain misting chambers.

EASTERN QUEBEC

AGRICULTURE CANADA

Experimental Farm: Kamouraska

P.O. Box 400 La Pocatiere, Kamouraska, Quebec, G0R 1Z0
Contact: Mr. J.E. Comeau, Superintendent, Telephone: (418) 856-3141
Personnel: 35
Activities:

The experimental farm has the responsibility for the Eastern Canadian Sheep Program and a small potato breeding program.

Experimental Farm: Normandin

1472 Saint Cyrville Street, Normandin, Quebec, G0W 2E0
Contact: M. J.M. Wauthy, Superintendent, Telephone: (418) 274-3378
Personnel: 26
Activities:

Normandin maintains a small forage and cereal program.

Research Station: Ste-Foy

2560 Hochelaga Boulevard, Ste-Foy, Quebec, G1V 2J6
Contact: S.J. Bourget, Director, Telephone: (418) 657-7980
Personnel: 75
Activities:

The Ste-Foy research station conducts research on forage and cereal crops as well as research in the fields of soil management and conservation.

ENVIRONMENT CANADA

Canadian Wildlife Service

1141 route de l'eglise, Ste. Foy, Quebec, G1V 4H5
Contact: Jean Cinq-Mars, Director, Telephone: (418) 648-3914
Personnel: 34
Activities:

Responsible for the management of conditions affecting migratory birds. Participate in national and international programs for protection of wildlife. Gather data and conduct research on predatory and marine birds. Participate in negotiations with native peoples on management and hunting of migratory fowl. Administer regulations under the following laws: law on the international convention concerning migratory birds; law on Canadian wildlife; law on game hunting. Issue permits for taxidermists. Protect and manage habitats favourable to migratory birds and other wildlife. Develop plans for initiatives to protect wildlife from environmental crises. Promote the recogniztion of ecological principles, and conduct surveillance in the commercial exploitation of natural resources on federal lands.

Inland Waters Directorate - Quebec Region

1141, route de l'eglise, P.O. Box 10100, Ste-Foy, Quebec, G1V 4H5
Contact: Claude Triquet, Director, Telephone: (418) 648-3921
Personnel: 6
Activities:

Gather data on the quantity of surface water and evaluate the quality of water in lakes and water courses under federal jurisdiction. Participate with the Province in the initiation of the program for reduction of damage caused by floods. Furnish technical help for the evaluation of dredging projects, wharf construction, or port enlargement. Supervise studies of the spread of contaminants in the St. Lawrence River and Gulf. Conduct research on the response of aquatic and forest ecosystems to atmospheric pollutants, including acid rain. Operate a network of measuring stations to record tidal movements and water quality along shipping lanes.

FISHERIES AND OCEANS

Champlain Centre for Marine Science and Surveys

P.O. Box 15,500, 901 Cap Diamant, Quebec City, Quebec, G1K 7Y7
Contact: Paul Bellemare, Acting Director, Telephone: (418) 648-4908
Personnel: 88
Activities:

The activities of the Champlain Centre for Marine Sciences and Surveys are performed in the oceanographic and hydrographic areas. The oceanographic group can be divided into three fields of specialized research as follows: biological oceanography, with a mandate aiming for a better comprehension of the coasts and estuaries ecosystems; chemical oceanography, with a mandate for the preservation of the marine resources and the quality of waters under regional jurisdiction; physical oceanography, obtaining a better comprehension of the circulation of the mixed coastal waters.

Facilities:

Positional system - Syledis SR3; Electromagnetic currentometers - MARSH McBirney; Teledetection detector - MEISS.

Fisheries Research Branch - Quebec Region

Gare Maritime Champlain, P.O. Box 15,500, 901 Cap Diamant, Quebec City, Quebec, G1K 7X7
Contact: Jean-Jacques Maguire, Acting Director, Telephone: (418) 648-3543
Personnel: 65
Activities:

Research focuses on marine fisheries, and studies are often carried out in cooperation with Quebec universities or other government laboratories. Programs are underway in the following areas: stock delineation and assessment, and determination of yields for exploited stocks; life cycle and ecology of fish, invertebrate and marine mammal species of the Gulf of St. Lawrence and St. Lawrence estuary; structure and dynamics of marine ecosystems in the same areas; impact of man's activities (eg. pollution, hydroelectric development) on marine ecosystems; and protection of habitats critical to the life cycle of important species. Laboratory facilities are also located at the University of Quebec at Rimouski.

Maurice-Lamontagne Institute - Sciences

P.O. Box 1000, Mont-Joli, Quebec, G5H 3Z4
Contact: J. Boulva, Director, Telephone: (418) 775-6555
Personnel: 171
Activities:

Located on the south shore of the St. Lawrence Estuary in Eastern Quebec, the Maurice Lamontagne Institute (MLI) is involved in all three of the Department's areas of scientific activity: fisheries research, oceanography and hydrograhy. The purpose of the research conducted at MLI is to acquire the knowledge necessary for the formulation of scientific information and advice required for the management, protection and development of marine renewable and non-renewable resources in the fields of fisheries, ocean industry development, commercial shipping and recreational boating, and the management of Quebec's coastal zones. Research activities focus primarily on the St. Lawrence Estuary, including the Saguenay Fjord, the Gulf of St. Lawrence, and on waters of the Canadian Arctic and of Nothern Quebec, particularly James, Hudson and Ungava Bays. The Canadian Hydrographic Service in the Quebec Region is responsible for producing the charts necessary for safe navigation in the navigable waters of the Province of Quebec.

Dependent upon the MLI are a 23 PY satellite laboratory - the Arctic Biological Station, at Sainte-Anne-de-Bellevue, near Montreal - and field stations at Pointe-des-Monts, on the north shore of the Estuary and in northern Quebec.

Non-science functions at MLI include administration, facilities maintenance and the Quebec region office of the Small Craft Harbours Branch.

Facilities:

70 laboratories; 150 officers; computer centre; library; 1300 square metre tank room with fresh and sea water; 250 seat auditorium; 12 specialized workshops, 37 metre research "Louis M. Lauzier" and numerous small launches.

FORESTRY CANADA

Laurentian Forest Research Centre

1055 rue du P.E.P.S., C.P. 3800, Ste-Foy, Quebec, G1V 4C7
Contact: Mark Huard, Regional Finance Officer, Telephone: (418) 648-4991
Personnel: 149
Activities:

Systems analysis applied to forestry and related disciplines and computer simulation models including optimization by dynamic programming, of individual trees, stands, and of management strategies. Remote sensing as related to forest stand inventory. Insect pathology epidemiology, ecology, population dynamics and biological control of forest insects, particularly the spruce budworm and the gypsy moth.

NATIONAL DEFENCE

Defence Research Establishment: Valcartier

P.O. Box 880, Courcellete, Quebec, G0A 1R0
Contact: A. Patrick, Program Control Officer, Telephone: (613) 996-5912
Personnel: 608
Activities:

Defense Research Establishment: Valcartier (DREV), located adjacent to CFB Valcartier near Quebec City, conducts research in the fields of armaments, electro-optical aspects of surveillance and remote sensing, command and control, propellants, explosives, areospace, lasers and weapon systems analysis.

Facilities:

Mobile Lab - CO2 Laser Experiments; Pilot Plant - propellants and explosives.

METROPOLITAN MONTREAL

COMMUNICATIONS CANADA

Canadian Workplace Automation Research Centre

1575 Chomodey Boulevard, Laval, Quebec, H7V 2X2
Contact: Francine Gallo, Manager, Planning & Liaison, Telephone: (613) 990-4102
Personnel: 60
Activities:

The Canadian Workplace Automation Research Centre (CWARC) is devoted exclusively to R&D in all aspects of office automation. The R&D program will be centred around the broad topic of work place automation including the technological, socio-economic, behaviourial, institutional and international aspects. More specifically, it will ensure that the necessary technology is available at the appropriate time, ensure that Canadian universities take an active interest in the field in order that a flow of trained skilled people will be available to meet Canadian needs, ensure that the social, behaviourial and institutional impact of the introduction of the new technologies is investigated; maintain an awareness of developments on the international scene and advise industry and governments on developments and possible actions.

ENVIRONMENT CANADA

Atmospheric Environmental Service: Quebec Region

100 Alexis Nihon Boulevard, 3rd Floor, St. Laurent, Quebec, H4M 2N6
Contact: L. Racine, Financial Planning Officer, Telephone: (416) 739-4172
Personnel: 215
Activities:

Provision of meteorological services to the province of Quebec and the Eastern part of the Northwest Territories.

Facilities:

Weather radar; upper atmospheric measurement equipment; automatic weather stations; Other meteorological equipment; EDP equipment.

Canadian Meteorological Centre

2121 North Service Road, Suite 404, Dorval, Quebec, H9P 1J3
Contact: L. Racine, Financial Planning Officer, Telephone: (416) 739-4172
Personnel: 99
Activities:

Central processor of meteorological data.

Facilities:

EDP equipment.

Environmental Protection Directorate

1179 de Bleury Street, Montreal, Quebec, H3B 3H9
Contact: Raymond Perrier, Director, Telephone: (514) 283-0178
Personnel: 39
Activities:

Assure that human activities take place without compromising the integrity and the well being of man and the ecosystem. Responsible for the administration of regulations relating to atmospheric pollution and to water pollution (The Fisheries Act). Responsible for the application of the program for control of waste dumping at sea. Keep records of, or conduct inquiries into, all substances potentially dangerous for public health or the environment. Conduct surveillance of the disposal of dangerous wastes, including interprovincial or international transport. Coordinate government interventions in urgent environmental issues.

St. Lawrence Plan

105 McGill Street, Room 400, Montreal, Quebec, H2Y 2E7
Contact: Michel P. Lamontagne, Director, Telephone: (514) 283-7000
Personnel: 30
Activities:

Undertake the rehabilitation of the St. Lawrence River by controlling the sources of pollution, removing contaminants and exploiting resources. Develop a partnership on these matters with the province, industries, universities, interest groups and the general public. Promote: the conservation wildlife habitats, ecosystems and species of wildlife; protection against toxic emissions; restoration of wetlands; development and adaptation of environmental technologies related to industrial processes, toxic substances and organic chemistry.

Facilities:

Atomic absorption spectophotometers, fluorescence spectrophotometers, computer controls, scanners, incubators, colorimeters, automatic analyzers, centrifuges, graphite furnaces, fluorometers, ionic chromatography, and others.

FISHERIES AND OCEANS

Arctic Biological Station

555 St-Pierre Boulevard, Ste-Anne-de-Bellevue, Quebec H9X 3R4
Contact: Dr. A.W. Mansfield, Coordinator, Telephone: (514) 457-3660
Personnel: 24
Activities:

This satellite laboratory of the Maurice Lamontagne Institute studies life history, ecology and population dynamics of marine mammals in Arctic and eastern Canadian waters, and of marine and anadromous fishes of the subarctic, and the effects of environmental disturbance on these animals. Productivity of Arctic benthos, plankton and fish is monitored to measure the effects of man's activities on the Arctic marine environment. Physiological studies on Arctic marine invertebrates and evaluation of the effects of Arctic crude oils on the invertebrate fauna are conducted, as well as assessment of seasonal fluctuation of microbial flora in northern marine waters and their ability to degrade Arctic crude oils. Advice is provided on the exploitation levels of main species.

Facilities:

Field station in Saluit, Northern Quebec; small coastal research vessel.

NATIONAL FILM BOARD

Technical Research Division

3155 Cote de Liesse Road, St. Laurent, Quebec, H4N 2N4
Contact: Eddy Zwaneveld, Director - Technical Research, Telephone: (514) 283-9143
Activities:

Research is directed towards making the NFB a centre for applied technical research and for the technical and artistic development of audiovisual communication. New impetus is being given to the applied research program and the modernization of facilities to meet the highest technical standards. Plans include the creation of an "Animation Centre" where all research on computer assisted animation will be collected. Some 25 research projects are presently underway in response to current production needs.

Facilities:

Computer-assisted editing system for films, using videotape and videodiscs; an interactive videotape programming and playback system, using video-cassettes.

NATIONAL RESEARCH COUNCIL OF CANADA

Biotechnology Research Institute

6100 Royalmount Avenue, Montreal, Quebec, H4P 2R2
Contact: B. Coupal, Director, Telephone: (514) 496-6101
Personnel: 52
Activities:

The Canadian government has invested heavily in the field of biotechnology with the establishment of the Biotechnology Research Institute in Montreal, to help Canadian industries become more competitive on international markets. The research centre focusses on the industrial applications of biological sciences and on the development of new processes and products relating to food, energy, health care, and forestry. Descriptions of major program areas are listed below.

Biochemical Engineering Program

6100 Royalmount Avenue, Montreal, Quebec, H4P 2R2
Contact: G. Andre, Telephone: (514) 496-6194
Activities:

Research focusses on biosensor studies, production of biopolymers, separation of products of industrial relevance; detoxification of waste products, development of biosensors and processes for waste-treatment applications; simulation of fermentation processes; development of new production technologies using bioreactors; bioconversion of lignin; scale-up of bioprocesses in pilot-plant facilities.

Cell Fusion and Molecular Immunology Program

6100 Royalmount Avenue, Montreal, Quebec, H4P 2R2
Contact: M. Lalande, Telephone: (514) 496-6140
Activities:

Research focusses on the development of cell fusion techniques for animal, fungal, and bacterial systems; production of monoclonal antibodies; selection of clones using laser screening techniques.

Enzyme Technology Program

6100 Royalmount Avenue, Montreal, Quebec, H4P 2R2
Contact: J. Gagnon, Telephone: (514) 496-6169
Activities:

Research focusses on the isolation and fundamental characterization of proteins and enzymes; production of biologically active peptides; modification of proteins; enzyme kinetics; molecular monitoring.

Genetic Engineering Program

6100 Royalmount Avenue, Montreal, Quebec, H4P 2R2
Contact: D. Thomas, Telephone: (514) 496-6156
Activities:

Research focusses on the synthesis of oligonucleotides, improvement of biopesticides, modification of microorganisms for the concentration of heavy metals, ligation of single strand DNA; expression and secretion of proteins by yeast, food proteases engineering, construction of yeast vectors, study of growth control in yeast; genetic expression and maturation of proteins in superior cells, vector construction for gene transfer, isolation of new mammalian cell lines.

TRANSPORT CANADA

Hydraulics Research Centre

10611 St. Patrick Street, Lasalle, Quebec, H8R 1S1
Contact: C.J.R. Lawrie, Chief - Waterways Development, Telephone: (613) 990-5617
Personnel: 3
Activities:

The Canadian Coast Guard's Hydraulics Research Centre is utilized by research engineers to conduct in-house studies in establishing safe and efficient channel conditions for navigation in Canadian waterways. Investigations are conducted on scale models simulating the site and vessel conditions to be studied. In general, these studies are oriented by the departments regulatory and operational responsibilities, and they relate to existing conditions or proposed developments. Some of the research programs in progress or being planned are: the investigation of methods of protecting bridge piers in navigable waters; study of buoy mooring forces; determination of loss of speed/power of vessels navigating in ice-infested waterways; and testing of large vessel manoeuvrings in restricted waterways.

Transportation Development Centre - Headquarters Administration

Guy Favreau Complex, 200 Dorchester Boulevard, Suite 601, West Tower, Montreal, Quebec, H2Z 1X4
Contact: Trevor Smith, Senior Research Officer, Telephone: (514) 283-0022
Personnel: 46
Activities:

Program identifies, promotes and manages the application of science and technology towards developing a safer, more effective Canadian transportation system. Research and development projects in support of Transport Canada's operational, regulatory, policy planning and evaluation functions.

WESTERN QUEBEC

AGRICULTURE CANADA

Animal Pathology Laboratory: St-Hyacinthe

3400 Casavant Blvd. West, St. Hyacinthe, Quebec, J2S 2L8
Contact: Vicki Lauzon, Financial Officer, Telephone: (514) 995-5433
Personnel: 15
Activities:

The principal programs are the national program for control of animal diseases, the national program for control of meat quality, and research on porcine diseases. The laboratory is divided into five sections:

- Serology: diagnostic service for control of animal diseases;
- Meat Quality: Microbiological examination of fresh and processed meats; particular attention is given to those micro-organisms that are dangerous to public health;
- Bacteriology: Identification of, and research on, diseases of native animals of national importance, caused by bacteria;
- Virology: Research on animal diseases caused by viral infections.

Facilities:

The laboratory is furnished with safe, ultra modern equipment for the handling of dangerous substances: electron microscope; analytical ultracentrifuge.

Experimental Farm: L'Assomption

P.O. Box 1070, L'Assomption, Quebec, J0K 1G0
Contact: M. F. Darisse, Superintendent, Telephone: (514) 589-4775
Personnel: 22
Activities:

A regional horticulture program and an ornamentals program are conducted at L'Assomption.

Food Research Station

3100 Laframboise Boulevard, Suite 103, St-Hyacinthe, Quebec, J2S 4Z4
Contact: Dr. Rene Riel, Director, Telephone: (514) 773-1105
Personnel: 73
Activities:

At St. Hyacinthe, research is concentrated on the following: dairy, meat and plant food processing for eastern Canada.

Facilities:

There are laboratories for the basic food disciplines and also six major pilot plants oriented towards food engineering, biotechnology, aromas and extraction, irradiation and cheeses. These facilities are accessible to researchers from the food industry or other organizations to do their own research and development.

Research Station: Lennoxville

P.O. Box 90, Lennoxville, Quebec, J1M 1Z3
Contact: Dr. J.C. St. Pierre, Director, Telephone: (819) 565-9171
Personnel: 97
Activities:

Lennoxville has the responsibility for the following research programs: dairy, swine, and a small program on beef.

Research Station: St-Jean-sur-Richelieu

P.O. Box 457, St-Jean-sur-Richelieu, Quebec, J3B 6Z8
Contact: Dr. C.B. Aube, Director, Telephone: (514) 346-4494
Personnel: 76
Activities:

This station concentrates on a tree fruits program and a vegetables program.

CONSUMER AND CORPORATE AFFAIRS CANADA

Patent Office

50 rue Victoria, Hull, Quebec, K1A 0C9
Contact: J. Tanguay, Acting/Activity Coordinator, Telephone: (613) 994-4792
Activities:

The objective of the Patent Office, in granting patents, is to acquire and disseminate technological information and to encourage the creation, adoption and exploitation of inventions. Patent applications are examined to ensure that they comply with the requirements of the Patent Act and the Patent Rules. Such examination includes a search of the prior art, a decision regarding the presence of novelty, utility and inventive ingenuity, and verification of compliance with all other aspects of Canadian patent law.

ENVIRONMENT CANADA

Environmental Protection Service: Hull

Place Vincent Massey, Hull, Quebec, K1A 0E7
Contact: Robert Matteau, Chief - Financial Services, Telephone: (819) 953-1148
Personnel: 305
Activities:

The objective of the EPS is to ensure that human activities are conducted in a way that will achieve and maintain a state of the environment necessary for the health and well being of man, the health and diversity of species and of ecosystems and the sustained use of natural resources for social and economic benefit.

Parks Canada - Archeological Research Centre

10 Wellington Street, Hull, Quebec K1A 3G2
Contact: Yvonne McNutt, Head - Administration, Telephone: (613) 993-9800
Personnel: 43
Activities:

Provide, through the research and analysis of physical, documentary and oral evidence, information necessary to determine significance, treatment and use of historic and pre-historic resources for Parks Canada's purposes and make it available for public benefit.

Water Resources Branch

Place Vincent Massey, 351 St. Joseph Boulevard, Hull, Quebec, K1A 0E7
Contact: D. Kimmett, Director, Telephone: (819) 997-1508
Personnel: 37
Activities:

The collection, processing, analysis, storage, interpretation, and provision of water quantity and sediment data for water resources management.

Facilities:

Data Collection Platforms (DCP); Power Supply Systems; Sensors; Portable Data Logger; Automated hydrographic data acquisition systems.

INDIAN AND NORTHERN AFFAIRS CANADA

Renewable Resources Directorate

10 Wellington Street, Hull, Quebec, K1A 0H4
Contact: Ted Langtry/Burt Shaw, Telephone: (613) 997-0046
Personnel: 43
Activities:

The Directorate with headquarters in the National Capital Region coordinates, develops and recommends policies, strategies, plans and regulations for environmental protection in Yukon and NWT and in adjacent off-shore regions. It manages an applied northern environmental research program and sponsors other applied research to support this role. The Directorate also develops and implements policies concerning environmental impact assessment of northern development projects, and is responsible for the implementation of the Federal Environmental Assessment and Review Process within the Northern Program.

NATIONAL RESEARCH COUNCIL OF CANADA

Industrial Materials Research Institute

75 De Mortagne Boulevard, Boucherville, Quebec, J4B 6Y4
Contact: G.L. Bata, Director, Telephone: (514) 641-2280
Personnel: 112
Activities:

The Institute is responsible for major research and development projects - in the industrial and manufacturing sectors in Canada, dealing with a vast range of materials including metals, glass, ceramics, concrete, and plastics. In particular, researchers study manufacturing processes used for making these materials, resistance to corrosion, chemical degradation, wear, aging, and fatigue; and the establishment of mathematical models of moulding, assembling, and finishing processes.

The Institute's mission has been clearly identified from the onset and will be accomplished by such means as: performance of research either internally or in cooperation with industry for the solution of difficult problems; provision of technical assistance and advice; a repository of technical information; and technology transfer to industry via contracts, secondment of personnel, and provision of laboratoryfacilities and specialized testing equipment for industrial firms. A significant fraction of the Institute's budget is available for contracting out research to industry, universities, and other research institutes. Descriptions of the major program areas are listed below.

Automation of Processing Procedures Program

Contact: J.H. Prinsen, Program Manager, Telephone: (514) 641-2280
Activities:

This program is aimed at developing systems and sensors used to measure the properties of materials during manufacturing and utilization so as to provide optimum properties, process control, and performance forecasting. Specifically, activities include real-time evaluation of properties during materials processing and development of control systems; non-destructive testing of the quality of materials and finished products so as to quantify their performance; and development of sensors using new technologies to provide spot checks and continuous monitoring of the quality and properties of materials and finished products and structures.

Coatings and Ceramics Program

Contact: S.F. Turcotte, Program Manager, Telephone: (514) 641-2280
Activities:

This program is aimed at developing and adapting coating techniques to solve problems caused by deteriorating materials, and to replace more expensive techniques. Activities also include the development of industrial ceramics. Two processes are used to produce coatings, i.e., plasma projection, a coating technique with wide application that is relatively easily transferred to industry, and continuous coating, using a pilot chain. In the latter case, galvanizing and electrogalvanizing provide relatively low-cost coatings for steel sheets that must be especially resistant to corrosion. New metal powders, ceramics, and cements are produced using non-conventional manufacturing techniques that provide wear resistant parts and coatings. There are also studies of adhesion and cohesion within materials, and techniques of characterization and performance measurement are being developed, i.e., for industrial ceramics such as refractory concrete and wear-resistant ceramics.

Exploratory Studies in the Field of Materials Science Program

Contact: G.L. Beta, Program Manager, Telephone: (514) 641-2280
Activities:

The objective of this program is to identify and explore advanced technologies in the field of materials; to develop the necessary level of competence among the scientists; to identify new applications and requirements in the field of materials; and to explore the possibilities of cooperative projects with partners at both the national and international level. The studies involve the identification and testing, at the preliminary stage, of any advanced technology that is likely to be developed with the intention of optimizing manufacturing processes and the properties of materials. In addition, fundamental studies in the field of materials science complement the above-mentioned studies and contribute to the training of researchers. Studies are also initiated and conducted with the aim of identifying new requirements in the area of materials and establishing the technical procedures to be observed in order to meet the requirements associated with these demands. Studies are being undertaken with the purpose of defining any new and relevant agreement with our industrial partners, as well as with research agencies at the national and international levels, who are capable of assisting IMRI in achieving a satisfactory level of development in materials science.

Metallic Materials and Composites Program

Contact: A.H. Marquis, Program Manager, Telephone: (514) 641-2280

Activities:

This program is concerned with the behaviour and processing of metals. The principal objectives are: the automation and regulation of arc welding procedures; studies of metals in conditions similar to normal service, fatigue, wear through abrasion, corrosion; and the manufacture of new metals using rheo-moulding, metallic composites, and protective oxide surface layers.

In the case of welding, improved knowledge of the processes will make it possible to obtain stronger welds and increase process productivity. For this reason, we have turned our attention to designing robot welding stations. To achieve this goal, it is necessary to enhance sensors that make it possible to visualize and control the weld by programming of a robot.

The behaviour of metals in service is approximated in studies of random cycle and high temperature fatigue, as well as in studies on aqueous and high temperature corrosion which simulate real conditions as closely as possible. This allows for the improved use of metals.

Studies on abrasive and mixed wear will make it possible to suggest materials to replace bronze. These materials are less costly and are also produced in Canada.

New materials or manufacturing methods are required for new applications. Obtaining adhesive oxide layers will allow extensive improvement in corrosion resistance. The manufacture of rheo-moulded metals will make it possible to achieve improved malleability and a higher degree of homogeneity. The manufacture of composite metals (metallic fibres in a metallic matrix) will allow better mechanical properties to be realized for metals with minimum mechanical properties. Routine analyses (scanning microscopy using an elctron probe, spectroscopy, chemical analyses, thermogravimetry, and calorimetry) are techniques available.

Plastics and Polymer Composites Program

Contact: A. Catani, Program Manager, Telephone: (514) 641-2280
Activities:

This program is aimed at promoting the growth of the Canadian plastics industry through applied research as a means of improving the properties, processing, and performance of polymers. The program is designed to develop and characterise higher performance materials or lower cost materials of equal performance using polymer alloys or composites with a polymer matrix. It is also designed to develop techniques and provide analyses to predict the performance of polymer products and structures. Institute activities in the area of plastics and composite processing models and automation have been related to injection moulding of plastics and rubber.

TRANSPORT CANADA

Motor Vehicle Test Centre

P.O. Box 285, Blainville, Québec J7E 4J2
Contact: Mr. J.R. Galarneau, Director, Telephone: (514) 430-7981
Personnel: 35
Activities:

Maintains physical facilities and provides some motor vehicle testing services for the Road Safety and Motor Vehicle Regulation Directorate of Transport Canada, and for other public and private sector clients.

Facilities:

High and low speed tracks; vehicle dynamics test area; brake test area; crash test barrier; large and small cold chambers; chassis dynamometers; emission analysis bench; pendulum test device; roof crush test device.

EASTERN ONTARIO

AGRICULTURE CANADA

Health of Animals Laboratory

Animal Diseases Research Institute: Nepean
801 Fallowfield Road, P.O. Box 11300, Nepean, Ontario, K2H 8P9
Contact: Vicki Lauzon, Financial Officer, Telephone: (613) 995-5433
Personnel: 209
Activities:

This Institute has expertise in the disciplines of veterinary microbiology, virology, immunology, pathology, and reproductive pathophysiology. Basic and applied research is conducted to improve the diagnosis, prevention and/or control of zoonotic and foreign animal diseases such as rabies, brucellosis, African swine fever and bluetongue. Also studied are selected indigenous diseases which cause high losses to productivity or impede international trade opportunities. The Institute conducts laboratory tests to support national animal health and food safety programs, to support the international export of Canadian livestock, to prevent entry of foreign animal diseases into Canada and to certify the purity, potency, safety and efficacy of veterinary biological products. It is the national centre for foreign animal disease diagnosis and produces diagnostic reagents used in Canada and internationally for livestock disease diagnosis.

Facilities:

Two transmission EM; Two High performance (pressure) liquid chromatograph (HPLC); Biological containment facilities suitable for work on Brucella, TB, Rabies, etc.; Fermentation equipment; Micromanipulation and freezing equipment for work with embryos; Equipment for electrophoresis, immuno-electrophoresis and isoelectric focusing (includes poly-acrylamide gels, immuno-blots, Nucleic acid electrophoretic analyses); Computerized systems for reading and analyzing results of enzyme immunoassays; Biological containment facilities (MRC levels D and C) for laboratory animals, livestock and veterinary biologics production. Clean room for sterility testing.

Animal Research Centre

Ottawa, Ontario, K1A 0C6
Contact: Dr. E.E. Lister, Telephone: (613) 993-6002
Personnel: 252
Activities:

The Animal Research Centre conducts research in nutrition, physiology, management, genetic evaluation, product quality, and disease resistance in beef and dairy cattle, swine, and poultry; animal waste management; food and feed safety; and animal behaviour and welfare. The centre strives mainly toward improving the production efficiency and product marketability of intensively housed and managed livestock and poultry. Emphasis is placed on the introduction of the most up-to-date biotechnology methods to animal research. Mycotoxin research is providing sound guidelines on contamination tolerance in feeds.

Biosystematics Research Centre

K.W. Neatby Building, Carling Avenue, Ottawa, Ontario, K1A 0C6
Contact: Dr. R. Trottier, Director, Telephone: (613) 996-1665
Personnel: 114
Activities:

The Biosystematics Research Centre provides Agriculture Canada and other departments, agencies, and their clients with systematic expertise for dealing with economic and social aspects of insects, mites, spiders, plant parasitic nematodes, weeds, crop plants, native plants, plant parasitic and biodegrading fungi, and nonmedical bacteria. As the only Canadian organization with comprehensive collections, systematic research, and identification expertise, BCR continues to support production and resource protection for two major Canadian industries, agriculture and forestry. Research activities have been progressively realigned in response to demands on areas such as integrated pest management, environmental protection, beneficial utilization of biological resources, and biotechnology.

Chemistry and Biology Research Institute

K.W. Neatby Building, Carling Avenue, Ottawa, Ontario, K1A 0C6
Contact: Dr. I. de la Roche, Director, Telephone: (613) 995-5287
Personnel: 93
Activities:

Present research objectives are concerned with the development of effective and environmentally acceptable methods of weed and fungus control by pesticides, the development of analytical methodology to establish safe levels of fungal toxins in food and feedstuffs and to provide effective measures of decontamination and control the increase of the nitrogen-fixing capability of forage legumes through selection and genetic engineering of the bacterial symbiont and host improvement, the epidemiology and transmission of virus and mycoplasma diseases of plants in relation to disease incidence, management and control the efficient use of soil nitrogen the prevention of soil organic matter losses, and the minerology of Canadian soils, the provision of new knowledge on the mechanisms of cold acclimation, freezing injury and overwintering damage in relation to the development of crop plants, resistant to environmental stresses. The Institute also provides a comprehensive electron microscope service, analytical chemistry service, and mineral analyses service for Research Branch establishments across Canada.

Engineering and Statistical Research Centre

Building # 94, Central Experimental Farm, Ottawa, Ontario, K1A 0C6
Contact: Mr. P. Voisey, Director, Telephone: (613) 995-9671
Personnel: 83
Activities:

The Engineering and Statistical Research Centre provides the Research Branch with a centre of expertise where engineers and statisticians carry out research and analyses to improve agricultural and food production systems and to support research by other disciplines. Emerging and advanced technologies in agricultural engineering related to food quality, mechanization, structures, instrumentation, and automation are developed and transferred. Research efficiency is increased through the development and application of statistical methods.

Food Research Centre

Central Experimental Farm, Ottawa, Ontario, K1A 0C6
Contact: Dr. N. Tape, Director, Telephone: (613) 995-3722
Personnel: 58
Activities:

The Food Research Centre provides assistance to the food sector in terms of increased quality, efficiency, productivity and competitiveness through research programs covering the broad areas of dairy products processing; cereals and oilseeds processing; meat and poultry products; food composition and structure; meat and poultry products; food composition and structure; sensory evaluation of foods; and nutrition and safety. Increased priority will be given to the area of food quality, safety and nutrition.

Laboratory Services Division

Building 22, C.E.F., Ottawa, Ontario, K1A 0C6
Contact: DR. W.P. Cochrane, Director, (613) 995-4907
Personnel: 117
Activities:

This laboratory provides physical, chemical and biological testing services in support of inspections, quality and safety assurance programs of the food protection and inspection branch on food products (meat, egg, dairy, fruit and vegetable products) and agricultural inputs (feeds, fertilizers, seeds and pesticides). Analytical methodology research is conducted in order to maintain state-of-the-art quality service on a timely and reliable basis.

Facilities:

High and low resolution gc/mass spectrometers for low level micro-contaminant analysis of residues.

Land Resource Research Centre

K.W. Neatby Building, Carling Avenue, Ottawa, Ontario, K1A 0C6
Contact: Mr. J.L. Nowland, Director, Telephone: (613) 995-5011
Personnel: 192
Activities:

The Land Resource Research Centre activities include research, development, and services related to Canada's land resources. The Centre provides integrated information, assessment and leadership in soil inventory, soil taxonomy and interpretation, soil degradation, land evaluation, crop information system, and agroclimatic resources. Multidisciplinary research is undertaken to solve land resource problems in order improve the potential of land for sustained agriculture and other uses.

Plant Research Centre

Ottawa, Ontario, K1A 0C6
Contact: Dr. W. Baier, Director, Telephone: (613) 995-3700
Personnel: 265
Activities:

The Plant Research Centre is the centre for plant breeding in eastern and central Ontario. It is a major centre for biotechnology for crop improvement. The central office for the Canadian Plant Gene Resources is also part of the station. The programs include multidisciplinary research in plant molecular genetics, cytogenetics, plant physiology and pathology, entomology, cytochemistry, and grain quality. Specific programs emphasize experimental haploidy, tissue-culture genetics, cytology, insect pest management, attractants and diseases. As well, research is conducted on analytical methodology for fungal toxins and means to decontaminate cereals, nitrogen fixation by genetic engineering of symbiotic bacteria, viral disease epidemiology and transmission, environmental stress of plants and use of soil nitrogen. The management of the Central Experimental Farm, including numerous services, is also the Centre's responsibility. The Centre provides a comprehensive electron microscopy service and analytical chemistry service to other Research Branch establishment.

Smithfield Experimental Farm

P.O. Box 340, Trenton, Ontario, K8V 5A5
Contact: Dr. R.S. Miller, Superintendent, Telephone: (613) 392-3527
Personnel: 21
Activities:

The experimental farm is the national clonal repository. It also conducts a small program on fruit trees.

ATOMIC ENERGY CONTROL BOARD

270 Albert Street, Ottawa, Ontario, K1P 5S9
Contact: J.W. Beare, Director, Regulatory Research Branch, Telephone: (613) 995-2617
Personnel: 268

Activities:

Administration of Atomic Energy Control Regulations and participation in measures for international control of atomic energy. The making of regulations for developing, controlling, supervising, and licensing the production, application and use of atomic energy; the regulating of mining, refining production, processing, import, export, transport, possession, ownership, use or sale of prescribed substances; the defining of standards to be met, the assessing of the capabilities of licence applicants to meet these standards and to assure their maintenance, and the inspecting to ensure compliance; the conducting of mission-oriented research and development to obtain data essential for the effective implementation of licensing and compliance activities; and the designating, under the Nuclear Liability Act, of nuclear installations and the prescribing of the basic insurance to be carried by the operators of such installations, the developing of specialized safeguards, techniques and equipment in respect of CANDU reactors in Canada and abroad, in cooperation with the International Atomic Energy Agency in accordance with the Treaty on the Non-Proliferation of Nuclear Weapons.

ATOMIC ENERGY OF CANADA LIMITED

Chalk River Nuclear Laboratory

Chalk River, Ontario, K0J 1J0
Contact: Stephen Hall, Program Officer, Telephone: (613) 236-6444
Personnel: 2,012
Activities:

Programs cover a wide range of topics associated with atomic power. Work on basic physics, chemistry, materials science, and biology provides fundamental support to all aspects of nuclear technology and serves a national laboratory role in the nuclear sciences. The Chalk River Nuclear Laboratory (CRNL) supports the near-term needs of CANDU reactors by research programs on component development, systems chemistry, fuel behaviour, heat transfer, reactor control and instrumentation, and fuel channel behaviour. There is also development work to demonstrate that low and intermediate-level radioactive wastes arising from reactor operation can be immobilized in a stable form before disposal in a repository. Long-term needs of nuclear power are addressed by development of advanced nuclear fuel cycles and the development of accelerator technology.

Facilities:

NRX Reactor; NRU Reactor; Tandem Accelerator Superconducting Cyclotron (under construction); Tritium Extraction Plant (under construction); Computing Centre.

CANADA MORTGAGE AND HOUSING CORPORATION

682 Montreal Road, Ottawa, Ontario, K1A 0P7
Contact: Claude Lafleur, Manager - Capital Budget and Estimates, Telephone: (613) 748-2396
Personnel: 3,341
Activities:

The Corporation plans, manages and undertakes empirical social, economic and technical research, which is directed at understanding the conditions and relationships affecting the supply of, and demand for housing in Canada; its quality and affordability. This may include leading or participating in interdepartmental and intergovernmental research efforts. In technical and engineering fields such as for example, that concerning energy conservation and its consequences in the housing stock are examined. Further investigations are undertaken to field test and assess unproven housing technology.

COMMUNICATIONS CANADA

Communications Research Centre

P.O. Box 11490, Station H, Ottawa, Ontario, K2H 8S5
Contact: Francine Gallo, Manager, Planning and Liaison, Telephone: (613) 990-4102
Personnel: 440

Activities:

To advance Canada's research and development in the areas of telecommunications, space and information science and technology.

National Museum of National Sciences

P.0. Box 3443, Station D, Ottawa, Ontario, K1P 6P4
Contact: Dr. Stephen Cumbaa, Asst. Director, Collections and Research, Telephone (613) 996-9282
Personnel: 140
Activities:

To collect, record, preserve and understand the natural heritage of Canada and environs in order to foster the development of science; enrich the lives of present and future generations; assist a variety of national and international scholars and other clients to develop collections; and to understand, in the context of the world, the natural heritage of Canada.

National Museum of Science and Technology

1867 St. Laurent Boulevard, Ottawa, Ontario
Contact: Graham J. Parsons, Chief, Financial Services, Telephone (613) 991-3038
Personnel: 169
Activities:

The National Museum of Science and Technology is a national museum of international stature with two interpretive centres, the National Aviation Museum and the Agriculture Museum. It collects, records, preserves, seeks to understand and communicates information on collections of objects and related knowledge in the fields of communications and space, transportation,energy and renewable resources, industrial technology, the universe and pure sciences, and technology and society.

ENERGY, MINES AND RESOURCES CANADA

Canada Centre for Remote Sensing

2464 Sheffield Road, Ottawa, Ontario, K1A 0Y7
Contact: L. Whitney, Planning Advisor, Telephone: (613) 952-0281
Personnel: 146
Activities:

Improve remote sensing technology and facilitate the acquisition and dissemination of remote sensed data from aircraft and satellites.

Facilities:

Satellite receiving ground stations, image analysis systems, special purpose production systems with specially designed hardware interfaces.

Canadian Explosive Atmospheres Laboratory

555 Booth Street, Ottawa, Ontario, K1A 0G1
Contact: Mr. E.D. Dainty, A/Manager, Telephone: (613) 996-6285
Personnel: 14

Activities:

Federal certification, testing, quality assurance and standardization associated with the application of electrical and diesel explosion-proof equipment, fire resistant materials, gas detectors and other equipment used in atmospheres containing explosive gases and vapours found in underground gassy mines. Certification testing of similar equipment encountered in all other industrial locations where explosions can occur due to the presence of explosive gases.

Research into explosion and fire safety in atmospheres containing explosive gases, vapours and dusts that occur in mines and other industrial and commercial locations. Development of technologies to reduce the hazards involved.

Research into diesel engine exhaust emissions toxicity reduction and the assessment of the air quality in underground mines. Development of emissions reduction devices, air quality criteria and monitoring instrumentation, and ventilation cost reduction technologies.

Research into the safety of current mine hoisting practices.

Facilities:

Research and test facilities for: atmospheric gaseous explosion tests; dust explosion tests; dust image analysis; dust explosion ignition energy determinations; intrinsic safety tests; gas detection tests; fire-resistance tests for conveyor belts, electric cables, pipes, ducts and hydraulic fluids; engine load tests (400 hp) and exhaust emissions analysis; array of analysis instrumentation for assessment of dieselized underground mine air quality.

Canadian Explosives Research Laboratory

555 Booth Street, Ottawa, Ontario, K1A 0G1
Contact: Mr. R.R. Vandebeek, Manager, Telephone: (613) 995-1275
Personnel: 14
Activities:

Certifies explosives submitted for authorization under the Canadian Explosives Act, investigates accidents involving explosives, provides technical advice on and advances technology related to the manufacture, storage, transportation and use of explosives.

Facilities:

Includes large scale tanks to determine properties of explosives, friction and impact studies, dust explosibility equipment, accelerating rate calorimeter for thermal stability studies of energetic materials.

Conservation and Non-Petroleum Sector

460 O'Connor Street, Ottawa, Ontario, K1S 5H3
Contact: Linda Biard, Financial Analyst, Telephone: (613) 995-1787
Personnel: 442
Activities:

This sector of EMR is concerned with federal conservation, oil substitution and renewable energy initiatives in each of the major energy-using sectors.

CANMET, Energy Research Laboratories

555 Booth Street, Ottawa, Ontario, K1A 0G1
Contact: W.J. Pearson, Telephone (613) 995-1493, Fax (613) 995-9584
Personnel: 167
Activities:

Bench and pilot scale combustion testing. Analytical and chemical characterization of fuels - petroleum, coal, natural gas and coke. Bench and pilot scale testing of upgrading and refining, coprocesssing and gasification technologies. Catalyst characterization. Asphalt, pitch and tars blending and characterization. Ultrafiltration techniques using membrane separation. Metallurgical coal blending, coke making and evaluation.

CANMET/Mining Research Laboratories

555 Booth Street, Ottawa, Ontario, K1A 0G1
Contact: Robert T. Blake, Telephone (613) 996-4044, Fax (613) 995-3456
Personnel: 87
Activities:

Certify safety characteristics of explosives as defined under the Canada Explosives Act. National radiation calibration facility for airborne contaminants. Measure explosives parameters of various dusts. Certify equipment and materials for use in underground mines. Mechanical rock property testing facilities.

Geological Survey of Canada - Ottawa Division

601 Booth Street, Ottawa, Ontario, K1A 0E8
Contact: R.P. Riddihough, Chief Scientist, Telephone: (613) 995-4093
Personnel: 630
Activities:

The Geological Survey of Canada is responsible for the conduct of geological, geophysical and geochemical research and surveys directed at the discovery and estimation of mineral and non-renewable energy resources; investigation of geological and geophysical phenomena affecting engineering works and the environment; development of geophysical and other technologies; development of national geoscience standards; fostering Canadian and international geoscience activities; cooperation with the provinces; provision of advice to government and the public; and production and dissemination of maps and reports.

Facilities:

Instrumentation for geochemistry;, geophysical monitoring (seismicity, geomagnetism, global motions, gravity), geochronology, sedimentology; analytical chemistry, stable isotope and mineralogy labs; instrument development shop, electronics shops, cartographic and photographic equipment, data processing equipment, electron microprobes, scanning electron microscopes, inductively coupled plasma, mass spectrometers, X-ray fluorescence spectrometer, sub-bottom profiler, 1 twin-engine aircraft (Skyvan), 1 13m motor launch for seismic sounding.

Mineral Sciences Laboratories

555 Booth Street, Ottawa, Ontario, K1A 0G2
Contact: L.L. Sirois, Director, Telephone: (613) 995-4088
Personnel: 190
Activities:

The Mineral Sciences Laboratories conduct research into processes which enhance the productivity of the Canadian mineral industry, with a minimum impact on the environment. The knowledge base provides strong guidance in science related policy matters.

The main thrust is to develop and promote technology to beneficiate ores, extract metals from concentrates, and produce marketable mineral products while improving the process economics and reducing the environmental impact. All aspects of processing are examined including metallic and non-metallic minerals, concrete and advanced ceramics, precious and base metals. Industry is supported by the preparation of standards and reference materials. The main disciplines are mineralogy, mineral dressing, material characterization, hydrometallurgy, pyrometallurgy, biotechnology, chemical analysis and supporting sciences in detection and measurement.

Facilities:

Optical and electron microscopes and image analysis system; flotation, magnetic and gravity separation equipment; freeze-thaw, thermal property, conductivity and diffusivity measuring devices; small pilot plant scale equipment for leaching, solution purification and electrowinning of metals; high temperature apparatus for characterizing behaviour in smelting; biological and environmental chambers; wide spectrum of analytical equipment and computerized data systems.

Polar Continental Shelf Project

344 Wellington Street, Room 6137, Ottawa, Ontario, K1A 0E4
Contact: B. Fagan, Financial Administrative Officer, Telephone: (613) 990-6993
Personnel: 25
Activities:

Contributes to the orderly scientific investigation of Canada's Arctic regions by maintaining and improving a comprehensive field logistical network, and by promoting and coordinating scientific activities in the Canadian Arctic, in support of Canadian sovereignty, economic and social development, and protection of the environment.

Provides co-ordinated logistic support to public and private sector groups conducting scientific studies in the Arctic; provides professional, technical and managerial advice and support to clients; provides information about scientific operations in the Arctic to the scientific community and to the local inhabitants; and contributes to the coordination of scientific activities and to the development of Canada's Arctic Science strategy.

Rock Mechanics Laboratory

555 Booth Street, Ottawa, Ontario, K1A 0G1
Contact: Mr. G. E. Larocque, Manager, Telephone: (613) 996-8628
Personnel: 29
Activities:

The laboratory carries out mining technology research and technical investigations in the following areas: mining methods and equipment, mine evaluation, coal and uranium reserve assessment, mine cost models, rock mechanics and numerical models, rock structural properties and rock mechanics case studies.

Facilities:

Computers; computer graphics; rock test equipment and facilities.

Surveys and Mapping Branch

615 Booth Street, Ottawa, Ontario, K1A 0E9
Contact: A. Jansen, Director, Surveys, Mapping and Remote Sensing, Telephone: (613) 995-4871
Personnel: 883
Activities:

The Surveys and Mapping Branch is the federal government agency responsible for providing basic surveys and maps of Canada. The Branch's activities are of fundamental importance to the orderly and successful exploration and development of Canada's resources.

Facilities:

Aeronautical System: Intergraph System using DEC Vax 11/785; Interpro 32C Workstation; Interact Workstations; Versatec Plotter; V80 Plotter; Colour Plotter, SUN 3/280 servers; SUN 4/280 server; SUN 3/60 workstations; DEC Vax GPX workstations. Doppler & Global Positioning System Satellite Receivers; Inertial Survey System; Deep Bench Mark Drill Rigs; Motorized Levelling Unit; Surveying instruments. Environmental Systems - Universal Systems: Arc Information System; Zentronics - Micro Vax II; Penryn-Shugart Optimum 1000-3; Intergraph - Hardware; Kongberg - Interactive graphic Workstations; Meridian image processor; images and data from the French satellite "spot".

ENVIRONMENT CANADA

Canadian Wildlife Service - Ontario Region

1725 Woodward Drive, Ottawa, Ontario, K1A 0H3
Contact: Don Hughes, Chief, Administrative Services, Telephone: (613) 952-0933
Personnel: 30

Activities:
To conserve and promote the conservation and enjoyment of Canadian wildlife and migratory birds. To provide opportunities for the development of awareness enjoyment, understanding and appreciation of Canadian wildlife heritage and its environment.

Migratory Birds Branch - Populations and Surveys Division - Biometrics Section

Canadian Wildlife Service - 1725 Woodward Drive, Ottawa, Ontario, K1A 0E7
Contact: S. Curtis, Director, Telephone: (613) 998-4693
Personnel: 6
Activities:

Monitor distribution and abundance of waterfowl. Develop or improve surveys to determine production and populations of waterfowl species. Improve estimates and understanding of factors affecting mortality, and the relationship between hunting and non-hunting mortality. Design of experiments in wildlife research; develop estimators from mark recapture studies; store and retrieve biological information from bird banding and surveys.

Migratory Birds Branch - Waterfowl Research

Canadian Wildlife Service - 1725 Woodward Drive, Ottawa, Ontario, K1A 0E7
Contact: H. Boyd, Scientific Coordinator, Telephone: (613) 997-2957
Personnel: 4
Activities:

Assessing the use of migratory birds by native people and the interaction of migratory birds with the natural environment and with man's activities.

Office of the Science Advisor

Department of the Environment, Ottawa, Ontario, K1A 0H3
Contact: E.F. Roots, Science Advisor, Telephone: (819) 997-2393
Personnel: 3
Activities:

To provide advice on scientific matters to the Deputy Minister and senior departmental personnel as required. To provide liaison, coordination or representation on scientific matters within the Department, with other Departments, with other governments, and with the private sector and scientific community. To review scientific issues and developments and to make recommendations concerning Departmental or Canadian positions or actions.

River Road Environmental Technology Centre

River Road, Ottawa, Ontario, K1A 1C8
Contact: D.E. Thornton, Director, Telephone: (613) 998-3671
Personnel: 62
Activities:

Provides:
- Comprehensive air pollution measurement services including the development of new measurement technology
- vehicle emissions measurement capability and advice on all aspects of automobile emissions control technology
- the development and demonstration of environmental emergencies countermeasures technology
- a full range of analytical laboratory services.

Facilities:

Gas Chromatograph - Mass Spectrometer; Chasis Dynamometer and vehicle exhaust analysers; molbile laboratory for spills; stack sampling equipment.

National Wildlife Research Centre

100 Gamelin Blvd., Ottawa, Ontario, K1A 0H3
Contact: J.A. Keith, Director, Wildlife Toxicology and Surveys Branch, Telephone (613) 997-1092
Personnel: 36
Activities:

Activities are planned and conducted within the framework of two main fields - Wildlife Toxicology and Migratory Birds Surveys.

In Wildlife Toxicology:

- research on the toxic effects on wildlife of man-made substances;
- research on the identification, measurement and dynamics of known or suspected toxic substances in wildlife, their food and habitats;
- research on the effects on wildlife of the long range transport of airborne pollutants;
- evaluation of actual or potential effects of pesticides and other toxic substances on wildlife;
- monitoring and assessing the significance of the levels of toxic substances in the tissues of wildlife;
- maintaining a national wildlife tissue bank and national registry of toxic chemical residues to assist in long-term monitorng and evaluation of toxic substances; and
- providing advice and support to, or managing, research enterprises in Environment Canada, other government departments,

universities and research institutes in Canada and elsewhere.
In Migratory Birds Surveys:

- the design and conduct of national surveys of the hunting of migratory game birds and of the quarry reported taken;
- analysing and reporting on the results of the national harvest surveys, including information exchange with the U.S. Fish and Wildlife Service (USFWS) and American state wildlife agencies;
- acting as the national centre for bird-banding and for breeding bird surveys, programmes which are shared with the USFWS;
- providing biostatistical advice within the Canadian Wildlife Service;
- conducting and coordinating national programs of research on seabirds; and
- research and advice on the management of migratory birds.

Water Planning and Management Branch

Inland Water/Lands Directorate, Environmental Canada
Ottawa, Ontario, K1A 0E7
Contact: R.L. Pentland, Director, Telephone: (613) 997-2071
Personnel: 57
Activities:

Depending upon the nature of the work being conducted the Water Planning and Management Branch program activities can fall within any of the three stages - preplanning studies, planning studies or implementation activities. Research studies are undertaken at any one of these three stages. Topics may include water quantity, water quality, flood control, environmental impacts, socio-economic, water data, etc.

Wildlife Research Branch - Canadian Council on Ecological Areas

Canadian Wildlife Service, 1725 Woodward Drive, Ottawa, Ontario, K1A 0E7
Contact: D. Muir, Secretary - C.C.E.A., Telephone: (613) 997-4991
Personnel: 1
Activities:

Encourages and promotes legislated protection of national system of ecological areas and reserves, as the successor of the Associate Committee on Ecological Reserves. (Formerly part of N.R.C.)

FISHERIES AND OCEANS

Canadian Hydrographic Service

615 Booth Street, Ottawa, Ontario, K1A 0E6
Contact: Mr. J. O'Shea, Technical Assistant, Telephone: (613) 995-4358
Personnel: 89
Activities:

The CHS is primarily concerned with gathering and publishing hydrographic data and marine navigation information of Canada's navigable waters and adjacent international waters. This information is essential for the safe, orderly and efficient conduct of commercial, recreational and defence shipping. The Service also has the operational responsibility for integrated geophysical/hydrographic surveys of the continental margin and inland seas. Such surveys are essential to obtain a comprehensive description of the extent of the continental land mass and for the control, management and development of mineral and petroleum resources in these areas.

The Service publishes just over 1,000 nautical charts, more than any country in the world, except for the six (U.S.A., Britain, France, U.S.S.R., FRG, Japan) that maintain worldwide coverage. CHS also publishes 12 volumes of Sailing Directions, 8 Small Craft Guides and 6 volumes of Tide and Current Tables. Additionally it produces natural resource maps and charts in the General Bathymetric Chart of the Oceans series.

The objective of the Dominion Hydrographer's Office in Ottawa is to ensure that all charts and associated navigational documents are available to users on demand; to maintain national program planning and priorities; to maintain international liaison; to establish national standards and to approve all charts and publications before release; to provide basic and advanced training in hydrography and cartography; to publish sailing directions; to maintain coordination with DOT on Notices to Mariners; to provide specialist services for nautical geodesy, tides, current and water levels, nomenclature and cartographic development; to provide expertise on the delineation of maritime boundaries; and to provide expert witnesses in litigations involving infractions of the Canadian Territorial Sea or Canada Shipping Act.

Facilities: Automated cartographic systems.

Headquarters Science Coordination

200 Kent Street, Ottawa, Ontario, K1A 0E6
Contact: Mr. N.G. Freeman, A/Director, Policy and Program Coordination Branch; Telephone: (613) 990-0227
Personnel: 35
Activities:

The mandate of the Department of Fisheries and Oceans relates to the management of Canada's marine and freshwater fisheries and the provision of advice on the safe use and development of Canada's three oceans. In order to carry out this mandate, DFO undertakes a major science program which covers a broad spectrum of ocean and freshwater science and survey activities. HQ Science Coordination strives to ensure that scientific information of the highest international standards is available to the Government of Canada for use in developing policies, regulations, and legislation regarding the oceans and aquatic life; and to other Government departments, private industry and the public for use in planning and carrying out aquatic activities.

HQ Science Coordination provides national coordination of and functional direction to programs in the six DFO regions across Canada. This includes the development of national priorities and review and approval of regional workplans.

Marine Environmental Data Services

200 Kent Street, Ottawa, Ontario, K1A 0E6
Contact: Dr. J.R. Wilson, Director, Telephone: (613) 990-0264
Personnel: 31
Activities:

To acquire, process and archive tide and water level data, measured wave data, and physical-chemical oceanographic data; to provide data processing and expertise to the international oceanographic community; to provide data, data products and ocean information on request; to develop improved methods and techniques in data processing and archiving, new data products.

Facilities:

Mini-computers and peripherals, plotters, digitizers, micro-computers, computer terminals, microfilm devices, waverider buoys and related equipment.

FORESTRY CANADA

Petawawa National Forestry Institute

Chalk River, Ontario, K0J 1J0
Contact: Suzanne Rice, Financial Officer, Telephone: (613) 589-2880
Personnel: 133
Activities:

To develop, demonstrate and promote the use of practical means of establishing and managing forests, and practical means of enhancing the growth and quality of forests; to develop knowledge and techniques to assist forest management agencies and reduce wildfire losses, and utilize prescribed fire in a safe and ecologically sound manner; responsible for the acquisition, summary and publication of forest resource data at the national level. Dedicated to improving and expanding the information available on the forest resource, and to developing efficient methods for that purpose.

HEALTH AND WELFARE CANADA

Drugs Directorate

Health Protection Building, Holland Avenue, Tunney's Pasture, Ottawa, Ontario, K1A 0L2
Contact: D.P. Hills, Chief Administrative Officer, Telephone: (613) 990-8857
Personnel: 476
Activities:

The Drugs Directorate consists of seven bureaux: Biologics, Dangerous Drugs, Drug Research, Human Prescription Drugs, Nonprescription Drugs, Pharmaceutical Surveillance, and Veterinary Drugs. The Directorate is responsible for ensuring the safety and efficacy of human and veterinary drugs which are manufactured or offered for sale in Canada, as well as for the safety of cosmetics. New drug submissions and applications for proprietary medicines are evaluated nationally for their safety and efficacy, and also with respect to manufacturing and labelling aspects. The Directorate also licenses vaccines and other biological drugs for manufacture and sale. Surveillance programs are carried out to assess the safety, efficacy, pharmaceutical quality, advertising and manner of use of marketed drugs. It also carries out programs to control the misuse and abuse of drugs, particularly psychoactive ones, and to provide information to health professionals and to the general public on the quality and the wise use of drugs.

Environmental Contaminant Directorate

Jeanne Mance Building, Tunney's Pasture, Ottawa, Ontario, K1A 0L3
Contact: Sylvain St-Laurent, Financial Planning Officer, Telephone: (613) 954-8803
Personnel: 6

Activities:

Protection of health of clients (Indian and Inuit, Public Servants, travellers and all Northern Residents) from those factors in the physical environment which may be hazardous.

Environmental Health Directorate

Environmental Health Centre (Bldg 8), Boulevard de la Columbine, Tunney's Pasture, Ottawa, Ontario K1A 0L2
Contact: Mrs. L.B. Cornell, Acting Chief - Administrative Services, Telephone: (613) 957-3139
Personnel: 268
Activities:

The Environmental Health Directorate serves to protect Canadians from health hazards associated with natural and man-made environments, the components of which are the physical, chemical and technological encompassments in which modern man lives and works. Its main program areas are directed towards: the assessment and investigation of the health effects of environmental pollutants and health hazards associated with, and the control of, medical devices, radiation sources and hazardous products, in conjunction with the other organizational units of the Department; the assessment of the health effects of the Department; the assessment of the health effects of technological and sociological environments.

Facilities:

Anechoic Chambers - Sound and Radio Frequency Whole Body Counter - Radiation.

Environmental Health Lab

Pharmaceutical Chemistry Building, Tunney's Pasture, Ottawa, Ontario, K1A 0L3
Contact: Sylvain St-Laurent, Financial Planning Officer, Telephone: (613) 954-8803
Personnel: 27
Activities:

Analytical and advisory services relating to environmental aspects of Indian and Inuit population, as well as to the health and safety of Federal Public Service.

Facilities:

Air Flow Equipment Chemical Analysis Equipment.

Federal Centre for AIDS

2nd Floor, 301 Elgin Street, Ottawa, Ontario, K1A 0L2
Contact: Joanne Brisebois, Project Officer, Telephone (613) 954-5586
Personnel: 17
Activities:

The Federal Centre for AIDS is responsible for the planning, directing and coordinating of federal government activities under the National AIDS Program. The Centre encompasses: laboratory and field research activities; clinical trial coordination for new AIDS drugs and vaccines; surveillance of AIDS and HIV infection in Canada; international and intergovernmental liaison; advisory and other support services to health and social services, public and private enterprise; the development of AIDS education programs; integrated policy developments program monitoring and assessment of program resource services.
Facilities:

Inverted Microscope; Ultracentrifuge.

Food Directorate

Health Protection Building, Room 134, Tunney's Pasture, Ottawa, Ontario K1A 0L2
Contact: T. Theriault, Chief - Administration, Telephone: (613) 957-0365
Personnel: 258

Activities:

In the Food Directorate, scientific activities protect the public against deficiencies in the nutritional quality of foods and from microbial and chemical hazards that might cause illness. Major organizational units are the Bureaux of Chemical Safety, Microbial Hazards and Nutritional Sciences. The Food Directorate works together with the Field Operations Directorate in administering the food provisions of the Food and Drugs Act. Research divisions carry out studies in such fields as: microbial hazards in food the toxicology and food chemistry of food additives, contaminants and components the nutrient composition of food, nutritional status and bioavailability and effects of nutrients and the development of analytical methods for use in monitoring and surveillance. Scientific evaluation divisions exert influence on food safety through contributions to the development of policies, guidelines and regulations that take account of data from research and regional laboratories and from detailed review of industry submissions (eg. regarding the use of food additives and agricultural chemicals). The risks and benefits of chemical use and of other changes in foods and eating habits are issues for which a scientific basis for decision is provided.

Health Protection Branch

Jeanne Mance Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 1B7
Contract: A. Labelle, Administrative Officer, Telephone: (613) 957-3853
Personnel: 148
Activities:

To discharge its health protection responsibilities, the Department maintains five regional and twenty-two district offices across Canada. Of the Department twelve laboratories, five are located in Halifax, Montreal, Toronto, Winnipeg and Vancouver. Related scientific activities, which take place in the Regions, include: enforcement of domestic and foreign food industry compliance with health and safety standards, cooperative programs with provincial and municipal governments engaged in food surveillance, data collection to measure nutritional quality and identify chemical and microbiological hazards in food commodities; analysis of drug products and promotion of voluntary compliance with federal drug regulations by the drug industry and trade association; and analysis of medical devices.

For 1988-89, $6.5M and 148 person-years are estimated to be involved in regional S and T activities, primarily through analysis (laboratory) initiatives.

Facilities:

. Mass spectrometers
. Fourier transform infrared spectrophotometer
. Nuclear magnetic resonator
. Other state-of-the-art equipment such as HPLC, GLC, AA, thermal analyzer

Laboratory Centre for Disease Control

Tunney's Pasture, Ottawa, Ontario, K1A 0L2
Contact: J.S. Baylis, Chief - Administrative Services, Telephone: (613) 957-1762
Personnel: 173
Activities:

The Laboratory Centre for Disease Control is mainly a service-oriented directorate, whose primary function is to provide epidemiological information, microbiological data, and diagnostic reagents to provincial governments, hospitals and laboratories. The Directorate provides a national focal point and liaison in epidemiology and microbiology to international organizations, including the World Health Organization, Centres for Disease Control in the United States, and the Public Health Laboratory Services in England. The Laboratory Centre for Disease Control has 3 scientific bureaux: Communicable Disease Epidemiology, Chronic Disease Epidemiology and Microbiology. The two disease surveillance bureaux, Communicable Disease Epidemiology and Chronic Disease Epidemiology, monitor the incidence and causes of disease in Canada. They provide epidemiological assistance in epidemic situations and coordinate strategies for the control and prevention of communicable and non-communicable diseases. They also provide a surveillance system to study factors as potential causative agents in congenital anomalies. In the field of infection control, special programs are designed to assist in reducing the high toll of hospital and laboratory-acquired infections. The Microbiology Bureaux provide services to assist provincial and clinical laboratories in the diagnosis and treatment of disease.

NATIONAL CAPITAL COMMISSION

161 Laurier Avenue West, Ottawa, Ontario, K1P 6J6
Contact: J. Smrcka, Supervisor - Capital Budget Control, Telephone: (613) 239-5201
Personnel: 949
Activities:

The National Capital Commission conducts or promotes research, plans and studies related to the development of the National Capital Region as a symbol of identity for all Canadians. The areas of programs in which this Commission is involved include land development, transportation, provision of services and utilities, the encouragement and assistance in activities of a recreational or cultural character, and the development and management of parks and parkways.

NATIONAL DEFENCE

Defence Research Establishment: Ottawa

Ottawa, Ontario, K1A 0K2
Contact: A. Patrick, Program Control Officer, Telephone: (613) 996-5912
Personnel: 190
Activities:

Defence Research Establishment: Ottawa (DREO), located at Shirley's Bay, West of Ottawa, carries out applied research in a variety of areas including environmental protection, clothing, defensive aspects of nuclear, biological, and chemical warfare, electrical power sources, remote sensing, navigation, electronic warfare, satellite aided search and rescue, and some other aspects of space applications. DREO is also responsible for the military communications and radar research programs at the neighbouring Communications Research Centre (CRC) of the Department of Communications.

Facilities:

Mobile Lab - Radiation Measurement.

Operational Research and Analysis Establishment

101 Colonel By Drive, Ottawa, Ontario, K1A 0K2
Contact: A. Patrick, Program Control Officer, Telephone: (613) 996-5912
Personnel: 151
Activities:

The function of the Operational Research and Analysis Establishment (ORAE) in NDHQ is largely oriented toward system analysis, logistic, strategic, social and economic analysis relative to the Canadian Forces.

NATIONAL ENERGY BOARD

473 Albert Street, Ottawa, Ontario, K1A 0E5
Contact: B. Petrin, Chief - Budget and Estimates, Telephone: (613) 998-7972
Activities:

Energy regulation and advice - economic and market analysis; financial analysis of pipeline companies; engineering analysis of pipeline and power line construction proposals; certification of construction and operation of pipelines and power lines subject to federal jurisdiction; regulation of tolls and tariffs; providing advice to the minister; safety inspection of pipelines; conduct of public hearings; and administration services to the Board.

NATIONAL MUSEUMS OF CANADA

Headquarters
200 Kent Street, Ottawa, Ontario, K1A 0M8
Contact: Nancy Gauthier, Acting Chief - Financial Planning, Telephone: (613) 954-4372
Personnel: 354

Activities:

The program includes the National Museum of Natural Sciences - The National Museum of international stature that collects records, preserves, seeks to understand and communicates collections of objects and related knowledge in the natural and physical sciences (including botany, zoology, paleontology, earth sciences and astronomy); as well as the National Museum of Science and Technology, a national museum of international stature that collects, records, preserves, seeks to understand and communicate collections of objects and related knowledge in the fields of communication and space, energy (including agriculture and forestry), industry, transportation, man in his environment, and technology and its related sciences (including physics, astronomy, chemistry and biotechnology). Also included in the program are the National Programmmes which deliver museological services and advice and/or financial assistance to the National Museums, to other similar Canadian and international institutions and to Canadian communities; and corporate headquarters which provide administrative support to the areas involved in science activities.

Facilities:

Systematics, taxonomy and genesis of minerals and rocks, with emphasis on those from Canadian geological occurrences.

NATIONAL RESEARCH COUNCIL OF CANADA

The National Research Council of Canada (NRC) is Canada's largest and most diversified research and development organization. Its major role is to help Canadian industry make use of the latest advances in science and technology to compete effectively in national and international markets. At the same time, NRC continues, as it has over the past seven decades, to provide the nation with the basic and long-term research capability that is the essence of its strength.

As a research laboratory, NRC supports the efforts of all the R&D performers in Canada - the industrial firms, the universities, and other research agencies. NRC specializes in research in strategic technologies that will give Canada vital expertise with broad applications in many industrial sectors. Such work benefits not only those companies who are first to use the results, but also the many small and medium-sized firms who will be able to apply the technology once it becomes established. As a technological resource, NRC provides specialized information, hands-on assistance, and practical advice combined with project support funding.

NRC operates scientific and engineering laboratories and national facilities across Canada. Its comprehensive support programs under the Industrial Research Assistance Program (IRAP) are regarded by industry as being the best available. Through the Canada Institute for Scientific and Technical Information (CISTI), NRC also maintains one of the world's largest collections of scientific and technical literature, available to researchers throughout the country.

Canada Institute for Scientific and Technical Information

Building M-55, Montreal Road, Ottawa, Ontario, K1A 0S2
Contact: E.V. Smith, Director, Telephone: (613) 993-1600
Personnel: 226
Activities:

The Canada Institute for Scientific and Technical Information (CISTI), which has its origins in the National Research Council of Canada Library (later to become the National Science Library in 1966), was created in 1974 "to promote and provide for the use of scientific and technical information by the people and government of Canada to meet Canadian needs for economic, regional and social development."

CISTI is responsible for building and maintaining the national collection of scientific, technical, and medical literature. In addition, the institute operates a wide range of services, including document delivery, online information retrieval systems, reference and referral services, and publications, to facilitate Canadian access to the world's scientific and technical information resources. The collection is international in scope and presently consists of about three million titles, including books, conference proceedings, journals, technical reports, theses, and reference works. CISTI holds over 45,000 journal titles, including 32,000 active subscriptions. More than two million technical reports are held on microfiche.

CISTI's major activities include the administration of CAN/OLE, the Canadian Online Enquiry System, CAN/SDI, the Canadian Service for the Selective Dissemination of Information, CAN/SND, Scientific Numeric Databases, the largest lending and photocopying service in Canada and a reference, referral and literature searching service.

Canadian Journals of Research

Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: C. Bishop, Editor-in-Chief, Telephone: (613) 990-8184
Personnel: 24
Activities:

As a service to Canadian science and as a Canadian contribution to the world's scientific literature, National Research Council (NRC) publishes 13 primary research journals including the Canadian Journals of Botany, Chemistry, Civil Engineering, Earth Sciences, Forest Research, Genetics and Cytology, Physics, Microbiology, Physiology, and Pharmacology, Zoology, the Canadian Geotechnical Journal, Biochemistry, and Cell Biology, and Computational Intelligence. These highly cited publications feature high-quality refereeing and excellent technical production and all attract international contributions and subscriptions. The program is under the direction of an Editor-in-Chief, with volunteer editors, associate editors, and referees drawn from university, industry and government sectors.

Division of Biological Sciences

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: I.C.P. Smith, Director, Telephone: (613) 990-0884
Personnel: 227
Activities:

Burgeoning interest in biotechnology has focused the Division's research in several major areas of potential industrial interest, and has given rise to increased collaboration with industry. The Division is currently working with many firms to further technology development and transfer based on its research in these major areas of biotechnology. Work in the division is organized into three laboratories. Individual descriptions of units are listed below.

Carbohydrate Laboratory

100 Sussex Drive, Ottawa, Ontario, KlA 0R6
Contact: L. Van Den Berg, Head, Telephone: (613) 990-0854
Activities:

The Carbohydrate Laboratory is involved in the study and development of carbohydrate anitgens, vaccines and diagnostics for human and veterinary pathogens, and with microbiological and enzymatic conversions of commercial and medical interest.

Medical Biosciences Laboratory

Building M-54, Montreal Road and 100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: G.H.M. Adams, Head, Telephone: (613) 990-0884
Activities:

This laboratory studies socially and commercially significant problems of abnormal physiology at the whole-animal, cellular, and molecular levels, and applies the results to the diagnosis and treatment of disease through collaboration with industry and the health care system.

Protein Laboratory

Building M-54, Montreal Road and 100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: S. Narang, Head, Telephone: (613) 990-3247
Activities:

The objective is to study the properties of proteins in order to design proteins with novel functions for industrial application.

Division of Chemistry

Montreal Road, Building M-12, Ottawa, Ontario, K1A 0R6
Contact: D.M. Wiles, Director, Telephone: (613) 993-2330
Personnel: 215
Activities:

Chemistry is concerned with the interactions of atoms and molecules with each other, with electrons, and with electromagnetic radiation including light. Since the properties of all substances, whether solids, liquids, or gases, depend ultimately on these interactions, chemistry is materials science in the broadest sense. The research programs of the Division are therefore concerned with materials - their formation, characterization, preservation, modification, and utilization. Four main categories are pursued: inorganic and surface chemistry; organic and polymer chemistry; process development, analyses and methods; and kinetics, catalysis, and spectroscopy. The Division is divided into thirteen sections, descriptions of each are listed below.

Advanced Polymers and Composites Unit

Montreal Road, Building M-12, Ottawa, Ontario, K1A 0R6
Contact: D.J. Carlsson, Telephone: (613) 993-2268
Activities:

The section studies the chemical and physical characterization of fibres and plastics, when used alone, in blends, or in composites. Specific areas of interest include the study of morphology, orientation, and resin-fibre interaction as well as the deterioration of materials by heat, oxidation, radiation, combustion, etc., together with the prevention of these processed by the introduction of additives. Investigations are carried out of the basic chemical processes that produce carbon and silicon-based polymers, and that are used in their subsequent modification. Research on the effect of polymer structure and treatment on physical properties is also an important task. The section contains the division's nuclear-magnetic-resonance facility, which besides its analytical function, is used in the development of new techniques and studies of catalyst systems.

Analytical Chemistry Unit

Montreal Road, Building M-12, Ottawa, Ontario, K1A 0R6
Contact: S. Berman, Telephone: (613) 993-3520
Activities:

The section provides analytical chemistry services to the Division of Chemistry and other NRC scientists. The expertise of the staff and the special instrumentation in the section are also available to the private sector on a selective basis when these services cannot be obtained elsewhere. Almost half of the section's resources are devoted to activities associated with the National Research Council of Canada's Marine Analytical Chemistry Standards Program. This program, whose aim is to upgrade the quality of analytical chemistry with respect to marine samples and to help the oceanographic community with their analytical problems, is concerned both with methods research and development and the preparation of reference materials for distribution to marine scientists.

Chemical Engineering Unit

Montreal Road, Building M-12, Ottawa, Ontario, K1A 0R6
Contact: C.E. Capes, Telephone: (613) 993-2455
Activities:

Chemical engineering innovations are applied in industry with particular emphasis on membrane separation, fine particle, and combustion technologies. Background research and development are combined with on-site demonstration projects to design and operate processes in collaboration with client organizations most often in the minerals, fuels, chemical, and utility industries.

Colloid and Clathrate Chemistry Unit

Montreal Road, Building M-12, Ottawa, Ontario, K1A 0R6
Contact: J.A. Ripmeester, Telephone: (613) 993-2011

Activities:

The section conducts research to improve the understanding of the interactions between molecules and particles in clathrate and colloid systems, and applies laboratory studies to technological innovation, particularly in the recovery of bitumen from oil-sands deposits and of natural gas from naturally occurring gas-hydrate deposits. Fundamental studies of the properties of clathrates and a variety of other molecular solids are pursued using nuclear magnetic resonance, calorimetry, X-ray diffraction, theoretical modelling and other methods.

Computational Chemistry Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: M. Klein, Telephone: (613) 990-0979
Activities:

The section develops mathematical descriptions of materials and processes. The materials studied include solids, liquids, and biopolymers, as well as individual molecules. These studies involve mostly thermal, structural, and electrical properties. The mathematical models are solved by computer simulation to provide quantitative relationships between the materials and their various properties, thus providing a better understanding of the physical world and permitting the prediction of properties not readily accessible to direct measurement.

Free Radical Chemistry Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: K.U. Ingold, Telephone: (613) 990-0938
Activities:

The section provides quantitative information on the nature, structure, and reactivity of organic free radicals in solution. Research is concentrated on the damaging effect of lipid peroxidation and oxygen radicals in living organisms and the mechanisms of protection against such damage. Studies are also made of organic radicals having unusual chemical and/or physical properties.

Kinetics and Catalysis Unit

Montreal Road, Building M-12, Ottawa, Ontario, K1A 0R6
Contact: J.R. Morton, Telephone: (613) 993-2372
Activities:

The section studies the chemical properties and structures of free radicals and other transients, especially in the fields of atmospheric chemistry, catalysis, metal clusters, and transition-metal chemistry.

Laser Chemistry Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: P.A. Hackett, Telephone: (613) 990-0948
Activities:

The section promotes the use of laser technology in industrial applications by providing information on laser-driven chemical reactions and on laser methods for remote sensing and process monitoring. Major elements of the program include laser-isotope separation, laser development, and inorganic photochemisty.

Metallic Corrosion and Oxidation Unit

Montreal Road, Building M-12, Ottawa, Ontario, K1A 0R6
Contact: M.J. Graham, Telephone: (613) 993-3548

Activities:

The section studies the processes involved in the corrosion and oxidation of metals and alloys in order to solve corrosion problems. Work under this program includes studies of the growth and structure of thin oxide films on metals and alloys; investigations of the mechanism of formation and breakdown of protection oxide films in solutions containing halide ions; studies of the transport mechanisms operating during high temperature oxidation; and the quantification of surface-analytical techniques and their application to corrosion research. In addition to research activities, the section provides advice on corrosion-related problems.

Molecular Spectroscopy Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: H.H. Mantsch, Telephone: (613) 990-0946
Activities:

The section investigates the structure and properties of complex chemical and biochemical systems by means of non-destructive vibrational spectroscopic techniques. Research activities range from the development of special infrared and laser Raman equipment and techniques to the study of molecular conformation, including the affect of temperature and pressure on biological membranes, chemical detergents, sugars, drugs, and lubricants. Many projects involve interactions with industrial, academic, and other governmental laboratories.

Organic Chemistry Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: D. Griller, Telephone: (613) 990-0953
Activities:

The section provides fundamental information on reactive intermediates. Work under this program includes kinetic, synthetic, spectroscopic, and thermochemical studies of radicals, ions, carbines, and metallenes. It also includes the development of new instrumental techniques such as photoacoustic calorimetry and modulation spectroscopy.

Reaction Intermediates Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: J.C. Scaiano, Telephone: (613) 990-0952
Activities:

The section studies the behaviour of short-lived species involved in many reactions in solution and in the solid state. The approach includes several pulsed techniques, such as laser-flash photolysis and luminescence spectroscopy. The research interests of our group include the kinetics and mechanisms of processes involving excited states, free radicals, and carbines in reaction media such as solution, polymeric materials, and zeolites.

Solid State Chemistry Unit

Montreal Road, Building M-12, Ottawa, Ontario, K1A 0R6
Contact: C.M. Hurd, Telephone: (613) 993-2514
Activities:

The section conducts basic research into various physical and chemical properties of solids, particularly systems of possible technological interest. Areas of current interest include studies of reversible intercalation in layered compounds of potential battery materials; studies of electrode materials and lifetime cycling in prototype batteries; and electron motion in metals, semiconductors, and near-insulators. These studies involve measurements of magnetic, electronic, thermodynamic, and crystallographic properties.

Division of Electrical Engineering

Montreal Road, Building M-50, Ottawa, Ontario, K1A 0R6
Contact: S.A. Mayman, Director, Telephone: (613) 993-9010
Personnel: 198
Activities:

The Division undertakes a broad spectrum of work ranging from basic research and the acquisition of engineering knowledge to applied research and development. The term "electrical engineering" is used in its broadest sense and includes the frequency spectrum from DC to optical wavelengths, electronics (both digital and analogue), computer technology, and biomedical engineering. A diverse range of applications includes industrial technology, energy, meteorology, and health (both instrumentation and aids to the handicapped, and national and international standards). The Division serves a broad clientele of manufacturers, health care institutions, electrical utilities, and other government agencies by providing information, calibrations, and testing relevant to the expertise and facilities available. The Division operates nine major programs, six in Ottawa, two in Winnipeg and one in Toronto. Descriptions of each are listed as follows. See also National Research Council of Canada (Metropolitan Toronto and Manitoba) for additional information.

Computing Technology Unit

Montreal Road, Building M-50, Ottawa, Ontario, K1A 0R6
Contact: N. Burtnyk, Telephone: (613) 993-0261
Activities:

The section creates and acquires new knowledge in selected areas of computing technology and develops new applications of this technology in support of Canadian industrial innovation. The activity includes work in the related fields of parallel computing and system architectures, interactive workstation environments, computer vision, and artificial intelligence with the main application focus on future-generation intelligent robotics. Intelligent robots are advanced automated systems which, through the use of sensory perception, will carry out the necessary panning and reasoning processes to interpret their environment and to guide their actions in performing their tasks.

Information Technology Unit

Montreal Road, Building M-50, Ottawa, Ontario, K1A 0R6
Contact: J.W. Brahan, Telephone: (613) 993-2484
Activities:

The section studies, develops, and evaluates information technology with an emphasis on knowledge-based systems and applications in selected areas. Topics include database and knowledge-base design methodologies, knowledge representation and structuring, inferencing techniques and knowledge acquisition. Particular importance is placed on application-oriented projects undertaken in collaboration with industry, government agencies, and universities. Current application topics include the development of an interactive intelligent advisor for use with database design methodologies; other applications are being investigated in areas such as transportation and health sciences.

Medical Engineering Unit

Montreal Road, Building M-50, Ottawa, Ontario, K1A 0R6
Contact: O.Z. Roy, Telephone: (613) 993-9287
Activities:

The section provides a centre for the creation, dissemination, application, and use of biomedical engineering knowledge and techniques in support of life quality and health-care concerns. Areas of research include habilitation/rehabilitation engineering, the effects of non-ionizing radiation on the biological system, orthopaedic engineering, and biological information enhancement. The section publishes a biennial inventory of bioengineering projects in Canada and an inventory of rehabilitation research in Canada.

Photonics and Sensors Unit

Montreal Road, Building M-50, Ottawa, Ontario, K1A 0R6
Contact: J. Domey, Telephone: (613) 993-2557
Activities:

The section focuses on the development of new measurement principles and sensor systems that combine optical, electronic, and computer techniques. At present, research efforts are applied to two interrelated fields: 3-D vision and guided-wave optics. Work in 3-D vision includes the development of new optical techniques for the rapid and precise acquisition of three-dimensional surface data, as well as the processing of these data for purposes of object reproduction and recognition. Guided-wave optics research includes work in integrated optics, and non-linear optics oriented towards the development of new sensors and rapid data processing.

Power Engineering Unit

Montreal Road, Building M-50, Ottawa, Ontario, K1A 0R6
Contact: R.J. Densley, Telephone: (613) 993-2660
Activities:

The section advances the state-of-the-art in the measurement of electrical quantities in order to alleviate measurement problems facing the Canadian electrical industry and for the maintenance, enhancement, and dissemination of national and international standards. Engineering knowledge and expertise is provided to the Canadian electrical utilities and associated industries on high voltage phenomena including insulation, measurement, and environmental problems.

Public Security Program

Montreal Road, Building M-50, Ottawa, Ontario, K1A 0R6
Contact: J.G. Arnold, Telephone: (613) 993-3737
Activities:

The Public Security Program provides a focal point for all law enforcement research projects carried out at NRC. Through the Solicitor General of Canada, a Canadian Program of Science and Technology in Support of Law Enforcement has been established whereby the RCMP as Lead Agency and NRC as research performer closely cooperate to bring NRC's extensive scientific and technical capabilities to bear on problems facing the Canadian police community.

Division of Informatics

Building M-60, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: R. Taylor, Director, Telephone: (613) 993-1621
Personnel: 61
Activities:

The Division of Informatics coordinates EDP-related activates at NRC and provides a variety of computing and communication services throughout NRC. The Division consists of two principal branches, Computing Services and Networks.

Computing Services Branch provides computing and related services to the research divisions and the administrative branches of NRC, and to the Canada Institute for Scientific and Technical Information. Services included user education and assistance, analysis and programming, interactive and batch computing, a wide variety of programming languages, extensive mathematical and statistical libraries, database software, CAD software, extensive graphic hardware and software, scientific text processing, electronic mail (Bitnet), and file and job transfer between IBM and DEC systems. Services are based on a variety of hardware and operating systems, for example, VM/CMS and MVS/XA on an ABM3090, and VMS on a VAX750 and VAX780. An FPS264 scientific processor is attached to VM. Networks Branch assesses data communication needs on a broad scale, for example, interdivisional, NRC-wide, and NRC to external agencies, and recommends procedures and equipment by which these needs will be satisfied. It also provides voice telecommunication services throughout NRC.

Division of Mechanical Engineering

Building M-2, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: J. Ploeg, Director, Telephone: (613) 993-2424
Personnel: 287
Activities:

The Division undertakes research and development activities in three principal areas - thermodynamics, applied mechanics, and hydrodynamics - working closely with Canadian industry to address problems of both long - and short-term concern. The main research effort is related to Canadian transportation problems, while another significant program concentration is the development and application of technology to increase industrial productivity. An integral part of the research work consists of ongoing accumulation of basic engineering data and expertise as well as the operation of several National Facilities for engineering research and development. The Division operates eight laboratories in Ottawa and one in Vancouver. Descriptions of these laboratories and names of contacts follow. See also National Research Council of Canada (British Columbia) for additional information.

Engine Laboratory

Building M-7, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: D.M. Rudnitski, Telephone: (613) 993-2425
Activities:

The Engine Laboratory specializes in propulsion systems, especially airborne gas turbine engines. The capabilities include comprehensive measurement of gas-turbine-engine operating parameters, performance assessment of blade coatings, computer simulation and data acquisition/reduction, accurate thrust measurement, detailed measurement of turbine stage performance, and engine/machinery health monitoring. Studies and tests are also conducted on reciprocating engines, with primary emphasis on analysis of engine performance in relation to fuel properties. Internal aerodynamics-related work is undertaken in vehicular engine cooling systems with regard to fan performance, power consumption, and cooling ability. Novel designs of nozzle and highly loaded turbine stages are tested in a twice-full-size turbine rig to understand and develop design techniques for the gas turbine industry. Noise and vibration studies are conducted in areas covering sound-intensity measurements and power determination, especially in near-field reflecting environments, monitoring health of rolling element bearings and balancing of flexible rotor shafts. The Laboratory operates and maintains three principal engine test cells as National Facilities (one of them calibrated, one anechoic, and one with icing capability), as well as various smaller test cells and other facilities.

Fuels and Lubricants Laboratory

Building M-9, Montreal Road, Ottawa, Ontario, K1A OR6
Contact: L. Gardner, Telephone: (613) 993-2415
Personnel: 30
Activities:

The laboratory's staff deals with various enquiries on fuels and lubricants and associated products (such as greases, antifreezes, brake fluids, and hydraulic fluids), and especially on the effects of future fuels on engine combustion, performance, and durability. The Laboratory specialized in the analysis of new and modified fuels, fuel blends, and combustion systems and components for diesel and gasoline engines, and the assessment of their effect on performance, engine durability, and emission levels under conditions of general use by Canadian industry and private motorists. Hydrocarbon analysis is carried out to establish relationships between the structural composition of fuels and their physical and combustion properties. The physical investigation of fuel spray characteristics is undertaken to improve the understanding of combustion processes in reciprocating engines, and to generate data for potential application in mathematical models. Research is undertaken into filtration techniques and fuel cleanliness; the effects of corrosion and icing inhibitors and status dissipators on fuels during handling; oxidation stability during storage; and thermal stability in engine fuel systems. The Laboratory also specializes in the instrumentation, operation, and analysis of diesel engines to assess the effects of using future diesel fuels made from tar sands. Studies are conducted on energy storage and transmission methods for road vehicles.

Gas Dynamics Laboratory

Building M-10, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: R.G. Williamson, Telephone: (613) 993-2442
Activities:

Work in the Gas Dynamics Laboratory is concerned with the flow of fluids, mainly gases, in engineering applications. The spectrum of interest ranges from large continuous gas-flow rates at ordinary engineering temperatures (associated with power plants, heat exchangers or industrial processes), to very small flows in extremely high-temperature plasmas. Power plant work is centred largely on industrial and aviation gas turbines. Specialized experimental facilities, for research on all the major components of gas turbine engines, are operated in contract and cooperative research programs with industry. Other facilities allow studies leading to improvements in propulsion systems at forward speed, small gas turbine aeroengines at altitude, and the internal aerodynamics of industrial flows and processes. An additional activity is concerned with the use of high-pressure water jets for various industrial cutting processes.

Hydraulics Laboratory

Building M-32, Montreal Road, Ottawa, Ontario, K1A OR6
Contact: B.D. Pratte, Telephone: (613) 993-2417
Activities:

The Laboratory specializes in the formulation of models which are used to solve engineering design problems such a wave agitation in harbours; variations in tidal regimes due to natural conditions; the effects of wave forces on offshore structures; sediment transport in the nearshore zone; breakwater stability; and the interaction of ice with structures. Two - and three-dimensional modelling is carried out on large-scale models of on-shore and offshore structures such as breakwaters, drilling platforms, and artificial islands. The Laboratory conducts research into the generation of realistic sea states using state-of-the-art computer software in combination with wave generators. New and unique modelling techniques for estuaries, tidal bays, and sea ice are also investigated.

The Laboratory operates and maintains two major National Facilities for physical testing and research purposes: the 50 m x 30 m x 3m Offshore Wave Basin and the 63 m x 14 m x 1.5 m Coastal Wave Basin. Both are equipped with wave generators and extensive instrumentation, data acquisition, and computing systems. In addition, the Laboratory operates and maintains a number of smaller facilities including an ice tank and a high-discharge flume.

Low Temperature Laboratory - Uplands Laboratories (Alert Road)

Building M-17, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: I.R.G. Lowe, Telephone: (613) 993-2439
Activities:

The Laboratory focuses on low temperature thermodynamics, as well as on the effect of boreal climatic conditions on mechanical equipment and systems. Fundamental studies of snow and ice behaviour are undertaken to aid in the analysis of problems related to ice accretion and snow ingestion, for example by aircraft, railway locomotives, and offshore structures.

Industrial energy uses are analyzed for application of improved heat transfer processes, heat pumps, and heat exchangers. The Laboratory conducts studies of novel refrigerants and thermodynamic cycles to improve the efficiency of heat transfer equipment and systems under Canadian conditions. It also operates climatic facilities for performance verification of a wide range of engineering equipment under extreme conditions of temperature, snow, and freezing rain. The Laboratory's Helicopter Icing Facility permits full-scale icing-condition performance confirmation of rotor wing aircraft in hover mode, and of fixed-wing aircraft on the ground.

Manufacturing Technology Centre

Building M-4, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: G. McGregor, Telephone: (613) 993-2436
Activities:

The Centre specializes in the design and manufacture of specialized "one-of-a-kind" equipment and components as well as prototypes for use in experiments and test facilities at NRC, with emphasis on interpreting the user's stated performance requirements and converting them into working hardware. Experiments are undertaken to determine the capabilities and limitations of novel as well as quasi-conventional methods of designing, machining, joining, cutting, heat treating, and precision inspection, especially in conjunction with computer-controlled systems. The Centre also explores production methods best suited to novel materials such as carbon/epoxy composites and Kevlar/epoxy composites, with some work in aluminum matrix composites.

Systems Laboratory

Buildings M-2, M-3, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: V.J. Thomson, Telephone: (613) 993-9461
Activities:

The Systems Laboratory focuses on developing methods to integrate human skills and judgemental capabilities with the computational power and versatility of computers, in order to analyze and optimize a wide variety of engineering and industrial systems.

The Laboratory's capabilities result from an integration of the staff's multidisciplinary background in mechanical engineering, control systems, industrial engineering, and mathematics. The capabilities fall within two main areas.

The first area relates primarily to manufacturing. Software development and systems design are conducted for the computer control of flexible manufacturing cells and to improve the performance of computer-integrated manufacturing systems. Job-shop scheduling-modelling packages are developed, along with packages for computer-aided process planning and group-technology, off-line programming, and sensor control of robots.

The second area relates to the computer modelling of continuous systems, as an engineering tool in the design of machinery and control systems and in the solving of dynamic problems related to aircraft, machinery, ground vehicle stability, and vibration. Real-time computer models are developed with analog I/O's that have the capability of coupling directly to prototype control equipment. Techniques and software are also developed for discrete-event modelling and interactive computer-aided decision-making for process management. These are applied to a wide range of tactical problems in the allocation of limited resources, such as truck dispatching at mine sites, material flows at smelters, and grocery stocking in supermarkets; and to related strategic issues such as investment of capital for additional capacity.

In addition, the Vancouver office of the Systems Laboratory specializes in knowledge-based systems, including the development of software for low cost micro-computer based CAD/CAM systems, and the application of artificial intelligence principles to improve such systems.

Vehicle Dynamics Laboratory - Uplands Laboratories

Building U-89, Alert Road, Ottawa, Ontario, K1A OR6
Contact: C.A.M. Smith, Telephone: (613) 998-9638
Activities:

The Laboratory focuses on providing assistance to Canadian industry in the dynamic-behaviour prediction, assessment, and improvement of existing equipment and prototype designs, as well as in strength testing, to meet applicable specifications and standards. It operates major experimental facilities for this work, undertakes related research, and maintains a library of mathematical models for the prediction of car and train behaviour. In particular, the Laboratory conducts status and impact strength tests on prototype vehicles as well as proposed lading and tie-down arrangements, and develops and applies instrumentation for measuring forces, strains, velocities, and accelerations, both in the laboratory and over the road.

Full-scale vibration tests are conducted to determine resonant frequencies and vibration modes of whole vehicle structures and suspension systems. Mathematical models are developed, acquired, and adapted to predict stability and dynamic action of rail and highway vehicles. The Laboratory conducts research into the effect on vehicle stability of truck load distribution and trailer configurations, as well as their effect on proneness to damage highways. Compliance testing is undertaken to national and international standards.

Division of Physics

Building M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: M.J. Laubitz, Director, Telephone: (613) 993-1053
Personnel: 278
Activities:

The Division focuses on the field of metrology, on the understanding and resolution of physical problems relevant to the application of high technology to industry, and on certain areas of basic physics research. One of the major activities of the Division is to act, in effect, as the National Standards Laboratory for Canada, with a considerable part of its resources being devoted to disseminating, maintaining, and improving the basic standards of measurement. In addition to the six basic measurement quantities (length, mass, time, temperature, electrical and light units), the Division maintains a number of derived standards, such as those for ionizing radiation, acoustics, colour, pressure, and so on. The time standard is widely promulgated by radio and telephone lines. Calibration services for measuring instruments directly related to the other standards are provided for industry, universities, and government agencies. The Division has a substantial program of research adding to the understanding of the physics, or the resolution of materials problems, in areas of relevance to high-technology industry. A major area of investigation is in the realm of structures of low dimensionality, based on semiconducting materials, particularly silicon and gallium arsenide. Such structures are formed through epitaxial growth of various materials, and possess properties more closely resembling those of one or two-dimensional solids rather than conventional ones. These materials are expected to have significant industrial application in the next decade. Other programs support industrial or social development including research in acoustics, lasers, optics, photogrammetry, and thin films. Basic research is conducted in several areas including high-energy particle physics and plasma physics. The Division operates major facilities which are made available to the industrial and scientific communities, including a 50 MeV linear accelerator, an anechoic chamber, and a high-power one terawatt, nanosecond, pulsed C02 laser facility. The Division operates as three laboratories; the Laboratory for Basic Standards, the Laboratory for General Physics, and the Laboratory for Microstructural Sciences, each with five sub-groups. Descriptions of each are listed below.

Laboratory for Basic Standards - Acoustics and Mechanical Standards Section

Building M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: T.F.W. Embleton, Telephone: (613) 993-6052
Activities:

The section maintains the basic mass standard for Canada and also the primary national standards of acoustics, pressure, and density. It provides traceability for regulatory agencies, the Canadian Standards Association, and industries that require acoustical and mechanical standards for national and international trade. This activity includes the development of techniques to improve the reliability and ease of traceability.

New technology, in the form of specific devices, measurement techniques, and knowledge of acoustics provides direct support for innovation in Canadian industry. Studies include investigation of the mechanisms governing sound propagation outdoors in order to provide scientific solutions to current regulatory and environmental noise problems, vehicle testing, and source localization. Other studies develop new knowledge and techniques required to deal with health problems associated with sound and vibration, especially hearing loss and vibration-induced white finger syndrome.

Facilities:

The following facilities are available, on appropriate terms, to industry and universities: calibration of devices against the national standards of mass, pressure, density, and acoustical quantities; the IEC prototype listening room, an anechoic chamber of well established performance; a large measurement chamber for simulated ideal free-field measurements; and the instrumentation required for physical measurements of loudspeakers and other audio components.

Laboratory for Basic Standards - Electrical and Temperature Standards Section

Building M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: B.M. Wood, Telephone: (613) 990-9225
Activities:

The Electrical Standards group develops and upgrades primary standards of electrical measurements, and maintains facilities for the calibration of electrical devices and systems. Most units, of both AC and DC, such as voltage, resistance, capacitance, and inductance are covered as well as most radio frequency parameters from 1 MHz to 40 GHz. Clients are mainly from the communication and transport sectors, power distribution agencies, various government departments and agencies, and the general instrumentation community. The Temperature Standards group maintains the International Practical Temperature Scale (IPTS-68) in Canada, together with an auxiliary low temperature scale (EPT-76) and variuos associated secondary temperature standards, provides thermometer calibrations on the IPTS, and pursues development work on various aspects of temperature measurement. The section is also engaged in the development of instrumentation for physical measurements (such as salinometers, particle counting and sizing, humidity meters), and is conducting research towards extending the range and validity of the Practical Salinity Scale and investigations of the dynamic response of temperature sensors.

Laboratory for Basic Standards - Ionizing Radiation Standards Section

Building M-35, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: D.W.O. Rogers, Telephone: (613) 993-2715
Activities:

The section develops and maintains Canada's primary measurement standards for ionizing radiation and provides a variety of calibration services based on these standards. These are primary exposure standards for x-rays in the energy range 10 kV and for 60 Co sources, absorbed dose standard for 60 Co, and radioactivity standards for a variety of radionuclides. Absorbed dose standards for several beta sources are available in addition to calibration services based on the foregoing standards, and there is a Fricke dosimetry services for in-field calibration of medical accelerators. The major research in the section concerns the development of primary standards for medical accelerator beams, more accurate dosimetry and treatment planning in these beams, and general theoretical studies of radiation transport in materials using Monte Carlo techniques.

Laboratory for Basic Standards - Length and Time Standards Section

Building M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: G.R. Hanes, Telephone: (613) 993-2181
Activities:

The section maintains and improves Canada's primary standards and calibration services for length and time. It undertakes a set of coordinated research projects to: develop laser sources stabilized by atomic or molecular resonators for use as wavelength standards; extend precise frequency measurement to visible radiation; and investigate the use of single trapped ion as possible basic standard for length and time. It develops numerical and experimental methods for designing, constructing, and measuring multilayer optical coatings for use in new products for science and industry.

The section also maintains and disseminates Canada's official time. It has developed primary and secondary standards of time and frequency which allow Canada to match the world's time scales. It maintains a research activity on the improvement of these standards and on the development of new ones. The group operates various dissemination services such as the CHU short-wave station, time signals via telephone lines to various agencies and the general public, and provides time and frequency calibration services.

Laboratory for Basic Standards - Photometry and Radiometry Section

Building M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: R.E. Bedford, Telephone: (613) 993-9373
Activities:

The section develops and maintains basic standards for the measurement of colour, visible ultraviolet, and infrared radiation in the wavelength range 200 nm to 50,000 nm, and provides various calibration services. This is achieved by developing state-of-the-art measurement facilities in photometry, radiometry, and colorimetry. The section also carries out research and development work in support of its standards and calibration activities.

Laboratory for General Physics - High Energy Physics Section

Herzberg Laboratories, Carleton University, Colonel By Drive, Ottawa, Ontario, K1A 0R6
Contact: C.K. Hargrove, Telephone: (613) 957-8594
Activities:

The section performs basic research in the field of experimental particle physics. Work under this program includes the development of instrumentation for particle physics. The group is studying the weak interaction, using the TRIUMF accelerator to look at lepton number conservation and muon electron universality. It is also studying electron positron interaction at up to 200 GeV at LEP in CERN in Geneva and photo-production at Fermilab. Finally, there is research into particle detectors. Because modern particle physics experiments require typically five to ten years to perform, the various experiments in the section are at different stages.

Laboratory for General Physics - Laser and Plasma Physics Section

Building M-23A, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: A.J. Alcock, Telephone: (613) 993-3016
Activities:

The section is concerned with the application of high-intensity pulsed lasers to the production and investigation of high-density plasmas. Related projects include the development of high-power carbon-dioxide lasers, investigation of self-sustained discharge-excited excimer lasers, and the generation, detection, and application of ultrashort light pulses. Several laser systems are employed in the various projects.

Laboratory for General Physics - Materials Physics Section

Building M-23A, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: Z.S. Basinski, Telephone: (613) 993-7070
Activities:

The section studies the properties and behaviour of defects in materials and correlates that information in an attempt to understand the physical behaviour, including failure mechanisms, of metal and alloys. Various approaches are used, both experimental and theoretical, including examination of mechanical and electrical properties of closely controlled starting materials, and computer modelling.

Laboratory for General Physics - Photogrammetric Research Section

Building M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: Z. Jaksic, Telephone: (613) 993-2074
Activities:

The section addresses the major research and development aspects of modern photogrammetry and image metrology. Projects are chosen to meet the needs of users whose interests range from applications of aerial and space photogrammetry to the use of photogrammetry in medicine and engineering. Among these needs is the development of real-time solutions for measuring and controlling dynamic events and processes for applications in industrial inspection, control, surveillance, and machine vision.

Laboratory for General Physics - Thin Films Section

Building M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: J.A. Dobrowolski, Telephone: (613) 993-2094
Activities:

The section studies the properties, methods of production, and use of multilayer optical coatings and filters, essential to many scientific instruments and industrial equipment. As well as generating new knowledge, the group develops products for exploitation by Canadian industry and serves as a centre of expertise for government, universities, and industry on spectral filtering problems.

Laboratory for Microstructural Sciences - Chemical Physics of Semiconductors Section

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: D.F. Williams, Telephone: (613) 990-0958
Activities:

The research goals are: develop and use newer methods of preparing thin films of semiconductors; determine critical parameters in these deposition processes; and develop an understanding of the fundamental physics which determines the optical, electrical, and structural properties of these films. Both the materials and the preparation technologies chosen have potential applications for industrial semiconductor devices.

Laboratory for Microstructural Sciences - Condensed Matter Section

Building M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: E.W. Fenton, Telephone: (613) 993-9392
Activities:

Theory of important new phenomena in solid-state physics is developed, with emphasis on the research areas where experimental programs exist or are contemplated in the Microstructural Sciences Laboratory.

Laboratory for Microstructural Sciences - Molecular Beam Epitaxy and Microfabrication Section

Building M-50, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: E.V. Kornelsen, Telephone: (613) 993-1123
Activities:

The section produces high quality epitaxial films of silicon and III-V compound semiconductors; characterizes their structural, transport, and optical properties; and participates in their application to projects in both fundamental physics and microelectronics.

Laboratory for Microstructural Sciences - Quantum Electronics Section

Buildings M-50, M23-A, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: A. Szabo, Telephone: (613) 993-1122
Activities:

The section is concerned with electronic and optical properties of semiconductor systems of reduced dimensionality, electro-optical and non-linear optical interactions of semiconductors, and fundamental investigations of the interactions of light and matter. It collaborates with industry in these areas.

Laboratory for Microstructural Sciences - Surface and Interface Physics Section

Buildings M-50, M-36, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: P.H. Dawson, Telephone: (613) 993-9369
Activities:

The section conducts research on the characterization of surfaces and interfaces primarily of those semiconductor materials which are of interest in the growth and application of heterojunctions and superlattices. The work includes the development and application of new techniques of potential interest. The growth and properties of II-VI semiconductor thin films are also studied.

Herzberg Institute of Astrophysics

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: D.C. Morton, Director, Telephone: (613) 990-0907
Personnel: 221
Activities:

A primary responsibility of the Herzberg Institute of Astrophysics is the operation and maintenance of astronomical observatories as national facilities available to all interested scientists. It also conducts its own research programs in the fields of astronomy, space science, and molecular spectroscopy, and is engaged in the development of new techniques and instruments for collecting and assessing observational data. The Institute is truly interdisciplinary, with radio and optical astronomers working in close liaison with spectroscopists, physicists, chemists, and engineers. The two major Canadian observatories are in British Columbia. Individual descriptions of the observatories and major research programs are listed below. See also National Research Council of Canada (British Columbia) for additional information.

Planetary Sciences Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: A. McNamara, Telephone: (613) 990-0711
Activities:

The section performs basic research on auroral and meteoric phenomena. Studies of the auroral and ionospheric plasma processes are carried out using rocket-borne plasma probes, satellite and space shuttle instruments, and radar from the ground. Optical observations of the aurora and airglow employ spectrometers, photometers, low light-level TV cameras, and rocket and satellite-borne instruments. The data permit experimental and theoretical studies of plasma instabilities, natural and artificial plasma perturbations, auroral excitation and emission processes, magnetospheric substorms, and ionosphere and ionosphere-magnetosphere coupling. Investigations of meteor composition by spectrographs, and orbit determination by cameras and radar reveal the origins of these objects. Some are fragile and originate from comets and the primeval material of the solar system. Others, of rocky or iron composition, originate from asteroids and can be recovered on the ground as meteorites and studied for their chemical and physical properties.

Radio Astronomy Section - Algonquin Radio Observatory

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: J.M. Macleod, Telephone: (613) 993-6539
Activities:

The section is responsible for the operation and maintenance of the solar radio facilities at the Algonquin Radio Observatory (ARO). Routine radio observations of the sun are made with a small paraboliod, and a fan-beam scan of the 10-cm solar radio emission is made daily. A program of optical solar studies is undertaken at the Ottawa River Solar Observatory near Ottawa.

NRC is participating in the James Clerk Maxwell Telescope (JCMT), one of the world's most sophisticated radio telescopes, built on the summit of Mauna Kea in Hawaii. As a partner with Britain and the Netherlands, Canada will get a quarter of the telescope's available observing time.

The telescope is an extremely high-precision instrument designed to operate at sub-millimetre wavelengths ranging from 0.4 to 1.3 mm, a region of the electromagnetic spectrum that is now largely unexplored. It will replace the ARO 46-m telescope as Canada's national facility for molecular radio astronomy.

The research of the section covers radio galaxies, quasars, galactic magnetic fields, structure and properties of molecular clouds and star formation regions, searches for new interstellar molecules, radio flare stars, and solar physics.

Solar-Terrestrial Physics Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: J.R. Burrows, Telephone (613) 990-0748
Activities:

The section investigates phenomena occurring in space near the earth (i.e., in the magnetosphere) and in the solar system or heliosphere. These include various distributions of ions, electrons, cosmic rays, plasmas, magnetic and electric fields, and currants. The many processes which create and/or control these phenomena arise from solar variability and from the interaction of streaming solar plasma with the earth's magnetic field. The section conducts experiments using ground-based rocket and satellite instrumentation and theoretical analysis, in a program of basic and exploratory research directed toward understanding these processes.

Space Physics Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: J. Burrows, Telephone: (613) 990-0748
Activities:

The Space Physics Unit (SPU) conducts studies of plasmas and fields in earth's magnetosphere and high latitude ionosphere using rockets and satellites; studies of solar and galactic cosmic rays using ground-based and spacecraft instrumentation; operates a network of cosmic ray monitors with stations at Ottawa, Deep River, Goose Bay, Inuvik, and Alberta.

Spectroscopy Unit

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: D. Ramsay, Telephone: (613) 990-0919
Activities:

The section seeks to advance fundamental knowledge of the spectra of molecules, free radicals, and molecular ions in the microwave, infrared, visible, ultraviolet, and vacuum ultraviolet regions. The basic knowledge obtained has many applications in chemistry, physics, and astrophysics, and provides a rigorous base for testing theoretical calculations.

Institute for Research in Construction

Building M-20, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: G. Seaden, Director, Telephone: (613) 993-2443
Personnel: 271
Activities:

The mandate of the Institute for Research in Construction (IRC) is to provide a research and information service to the construction industry with the goal to assist that industry to operate efficiently and successfully in an era of rapidly changing technology and social demands. Its research activities have evolved over the years and are focused on issues related to the design, construction, and performance of buildings and structures in Canada's climate and geography. This includes research on the properties and durability of building materials, and the design and performance of the building envelope, climate loads, geotechnical considerations, sound insulation and acoustics, building systems and services, and on matters related to fire and safety. Research projects are undertaken in response to industry's identified needs, and may be funded in whole or in part by industry.

In keeping with NRC's commitment to work more closely with industry, the Canadian Construction Research Board (CCRB) was established in May 1985 to give the construction industry a greater voice in the shaping of IRC's policies and programs. The Board has identified technology transfer as a major concern in the industry. IRC operated as ten major groups, nine of which are in the Ottawa area, and one in Saskatoon. Descriptions of each are listed below. See also National Research Council of Canada (Saskatchewan) for additional information.

Acoustics Section

Building M-27, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: A.C.C. Warnock, Telephone: (613) 993-2305
Activities:

The section studies the propagation and attenuation of sound in buildings and building elements. This is done through a combination of standardized and advanced experimental measurements both in the laboratory and in diverse field situations. The response of people to sounds in their environment is also evaluated to discover simple rating systems that describe human reactions. Whenever possible, the knowledge obtained is applied to the solution of specific building problems and is disseminated to the public and the building industry through seminars and other appropriate means.

Building Materials Section

Building M-20, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: V.S. Ramachandran, Telephone: (613) 993-1596
Activities:

The objective of the section is to develop information on the characterization, properties, and behaviour of materials (organic, inorganic, and composite materials); assist in the preparation of standards and specifications; assist/collaborate with the industry in the development of new products, new test methods; monitor/assess the performance of materials or materials systems on site or in the laboratory; suggest remedial measures when needed; assist with the development of new uses for known materials; carry out specialized tests on raw materials or finished products; and educate practitioners on the proper application of materials.

Building Services Section

Building M-24, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: R.P. Bowen, Telephone: (613) 993-9580
Activities:

The section provides the knowledge base required for the design and operation of building services and for the design of the building envelope for the control of heat, air, and moisture. The services aspects include consideration of smoke-control systems for tall buildings, and aspects of the indoor environment such as lighting and ventilation systems. The building envelope considerations include the evaluation and understanding of the thermal, moisture, and air transfer characteristics of materials, components, and systems leading to standards, product development, and proper design. To component work in these areas, the section is involved with the development of knowledge and techniques for automated building knowledge transfer.

Codes and Standards Group - National Codes Secretariat

Building M-24, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: J.F. Berndt, Telephone: (613) 993-9960
Activities:

The objective of the group is to improve safety and construction efficiency by developing and maintaining recommended National Codes respecting the safety of buildings with reference to structural sufficiency, fire safety, and public health. These national model codes encourage efficiency in construction by providing a basis for uniformity of building requirements throughout Canada. The codes are published on a five-year cycle as up-to-date and progressive building and fire safety regulations for adoption by provincial and municipal authorities.

The objective is achieved through the provision of technical, secretarial, and financial support to the Associate Committees, which produce the model codes and associated code documents. Activities include coordination of technical contributions to the committees; technical studies; responding to code inquiries; drafting of code requirements; editing and translating code documents; committee secretarial service; and participation in technical and policy committees of the National Standards System. A close liaison is maintained between the Codes and Standards Group and the specialist research sections in the Institute.

Construction Technology Service Group

Building M-20, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: R.G. Turenne, Telephone: (613) 993-2607
Activities:

The group is responsible for answering and monitoring technical enquiries from the construction industry. Research staff also prepare publications designed to present the results of research in a form that can be readily understood by practitioners in the construction industry. They are involved in numerous other technology-transfer activities, such as administration of and participation in annual building-science forums, and technical committees, production of A/V packages, technical lectures, liaison with other agencies involved in the transfer of building technology to industry, and coordination of group visits to the Institute.

Fire Research Section - National Fire Laboratory

Building M-59, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: T.Z. Harmathy, Telephone: (613) 993-2204
Activities:

The objective of the section is to develop means of reducing life and property losses by fire. This objective is achieved by: building up basic knowledge on fire-related characteristics of materials and products, on fire processes, and on techniques for fire-safety design; developing fire-protective measures and increasing the effectiveness of existing measures; responding to the immediate research needs of regulatory officials, building-materials manufacturers, building designers, and the fire services; and participating in the development of building codes and fire test standards.

A significant portion of the section's work is carried out at the National Fire Laboratory in Almonte, Ontario. It is a national facility for studies such as large-scale fires, smoke-control measures in high buildings, and fire-fighting equipment and techniques.

The facilities of the section are available on a contract basis to the private sector, government agencies, and educational institutions for the investigation of fire phenomena and the development of products, systems, and test procedures.

Geotechnical Section

Building M-20, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: J.H.L. Palmer, Telephone: (613) 993-1466
Activities:

The section carries out investigations on soils, rock, permafrost, snow, and ice, with major emphasis on northern engineering, ice mechanics, foundation design (both for normal loads and earthquake forces), tunnelling techniques, and engineering in avalanche-prone areas. Research priorities are based on need, the uniqueness of the problem to Canadian conditions, and the resources available. Priorities and needs are defined through close contact with geotechnical consultants and engineering firms.

Instrumentation Unit

Building M-24, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: J.J. Park, Telephone: (613) 993-1421
Activities:

The unit provides the Institute's sections with expert advice and consultative services on instrumentation and system design, coordinates selection and purchasing of new equipment, and provides technical support for the proper maintenance of instrumentation and related equipment. These objectives are pursued through two main areas of activity: general instrumentation and computerized data acquisition and control systems.

Structures Section

Building M-20, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: A.C.C. Warnock, Telephone: (613) 993-2305
Activities:

The section's research provides information in three areas: design procedures, climatic loads, and structural behaviour. Research topics commonly arise in response to needs expressed by the authors and users of the National Building Code, and complement work done at universities and other institutions.

Efforts are directed in the areas that are inadequately addressed by university or industry research; masonry engineering and the structural behaviour of glass are two examples of current interest. Finally, the section has the general goal of monitoring structural behaviour in the field, learning the lessons provided by both successes and failures, and passing them on to designers and builders, and to codes and standards committees.

National Aeronautical Establishment

Building M-13A, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: G.F. Marsters, Director, Telephone: (613) 993-0141
Personnel: 271
Activities:

The National Aeronautical Establishment (NAE) pursues research and development objectives primarily in support of the Canadian aerospace community. However, the Division's expertise is directed not only to matters of aeronautical and aerospace concern, but also to programs related to airborne research, safety, industrial aerodynamics, and wind engineering. In performing these roles, NAE also maintains a number of National Facilities including various sizes of wind tunnels, specially equipped research aircraft, and structural test equipment which may be used on a commercial fee for service basis as well as for research and development projects. NAE operates five laboratories; Low Speed, High Speed, and Unsteady Aerodynamics, Aerospace Structures and Materials, and Flight Research. Descriptions of each are listed below.

Flight Research Laboratory

Building U-61, Uplands, Ottawa, Ontario, K1A 0R6
Contact: S.R.M. Sinclair, Head, Telephone: (613) 998-3071
Activities:

The Laboratory addresses improvements in air vehicle design and operational procedures, advancement of flight safety, and airborne studies in a variety of scientific disciplines. Specially equipped research aircraft are operated in support of these activities.

Flight Mechanics and Aircraft Flight Systems: the Laboratory undertakes research, system development, and technology transfer activities related to aircraft stability, control and handling qualities, advanced control and display systems, improved guidance and navigation of aircraft, and general issues related to the pilot-aircraft interface. The majority of these activities are joint undertakings with Canadian industrial or governmental agencies as partners.

Flight Safety and Operational Problems: the activities of Laboratory in this area are concentrated in the work of the Flight Recorder Playback Centre, the National Facility operated in cooperation with the Canadian civil and military aviation safety agencies. The Centre is involved in the full range of issues associated with the application and operation of flight data and cockpit voice recorders, playback, and analysis of recordings for accident and incident investigation.

Airborne Sensing: airborne research projects are undertaken in several specialized areas of airborne sensing. In general these studies involve "immersion" sensing wherein the measurement system is transported through the environment or field which is being measured. The major facilities involved in this work are - the Convair 580 Research Aircraft which undertakes aeromagnetics research and system development in support of geophysical surveying and submarine detection, as well as test and evaluation of various advanced airborne systems of interest to the Department of National Defence; the Twin Otter Atmospheric Research Aircraft which addresses airborne atmospheric studies relevant to air transportation, meteorological forecasting, air quality measurement, and agricultural crop monitoring; and the NAE Turbulence Research Aircraft.

Agricultural and Forestry Aviation: the Laboratory program in this area is focused upon improvements in aerial spray system efficacy through better understanding of the influence of aircraft wake flow disturbances on the spray dispersion pattern. A well calibrated and instrumented spray research aircraft is used for field studies.

High Speed Aerodynamics Laboratory

Building U-66, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: L.H. Ohman, Head, Telephone: (613) 998-3064
Activities:

The Laboratory maintains two principal projects.

Aircraft Aerodynamics - Compressible Flow: theoretical, experimental, and computational methods are employed to carry out aeronautical research and development in compressible flow. This work addresses means of improving aerodynamic efficiency of aircraft, particularly at transonic speed; means of increasing low-speed high-lift characteristics of wing/flap system; unsteady flow and structural vibration (buffet and flutter) arising from high speed flight and carriage of external stores; and computational methods for developing solutions or aids to solutions of problems associated with the above. Improved aerodynamic efficiency - for example, lower viscous drag and more effective lifting systems - leads to decreased fuel consumption and reduced structural weight, important benefits to the Canadian aerospace community. Canadian military operators will also benefit from the development of analytical methods to predict accurately the envelope for safe carriage and release of external stores.

Operation of Trisonic Wind Tunnel: The principal research tool at the laboratory is the 1.5 m x 1.5 m Trisonic Blowdown Wind tunnel featuring a Mach number range from 0.1 to 4.25, a wide range of density control, a special two-dimensional high Reynolds number adaption, and a half-model test configuration. The tunnel is operated as a full service facility, the laboratory providing operational services, maintenance, instrumentation, data processing and analysis, model design and fabrication, and theoretical and computational support services for both internal and external users. New testing techniques and equipment are developed for the upgrading and improvement of this facility.

Low Speed Aerodynamics Laboratory

Building M-2, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: R.J. Templin, Head, Telephone: (613) 993-2423
Activities:

The work of the laboratory is divided into three primary areas.

Aircraft Aerodynamics - Incompressible Flow: theoretical and experimental methods are utilized to carry out aeronautical research and development related to the improvement of subsonic aerodynamic efficiency of Canadian aircraft and to benefit the efficiency of new quiet propeller designs.

Terrestrial Aerodynamics: analytical and experimental studies deal with wind effects on buildings, bridges, and offshore structures, and the aerodynamic efficiency of surface vehicles. Benefits of this work include improved safety of large structures; reduction of undesirable wind effects in city centres; and energy savings by reduction of the aerodynamic drag of trucks, trains, and other types of ground vehicles. Development of the Darrieus rotor vertical axis wind turbine continues.

Operation of Wind Tunnels: management of several wind tunnel facilities comes under the control of the laboratory, the most significant being the 2 m x 3 m and the 9 m x 9 m Wind Tunnels. In addition to the use of these tunnels to support the aerodynamic projects of both the Laboratory and external agencies, facility development is an on-going project designed to improve productivity of the tunnels.

Structures and Materials Laboratory

Building M-14, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: W. Wallace, Head, Telephone: (613) 993-2469
Activities:

The Laboratory carries out research and development, and provides assistance to the Canadian aerospace community in matters relating to the design, fabrication, durability, and damage tolerance of airframes, engines, and space structures.

Seven laboratory sections address the topics of flight impact, structural analysis and testing, aeroacoustics, non-destructive inspection, engineering physics, composite materials, and metallic materials. A technical services group provides support to laboratory research and external clients in the calibration of force-measuring devices and accelerometers. It also provides design, instrumentation, and machine-shop support to these activities.
Major facilities exist for determining static strength, fatigue, durability, and damage tolerance characteristics of structures. This work may include tests on material coupons, components, and full-scale structural assemblies. A wide range of equipment is available for inspection of metallic, composite, and ceramic materials and components, including x-ray, eddy-current, ultrasonics, acoustic-emission, and liquid-penetrant techniques. The effects of high energy and low energy impacts on aircraft structures are studied using various pneumatic cannons and drop weight facilities. The Aeroacoustics Test Facility includes two acoustic reverberation chambers which enable the manufacturers of aircraft, spacecraft, and other equipment to demonstrate that their products will withstand intense noise up to 165 dB without damage.

Several collaborative projects with other NAE groups are underway including the development of a machine-vision-control system for industrial robots and for manipulators, such as "Canadarm" (Space Technology).

Unsteady Aerodynamics Laboratory

Building M-10, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: K.J. Orlik-Ruckeman, Head, Telephone: (613) 993-2395
Activities:

The Laboratory applies its expertise in fluid dynamics and chemistry to several diverse project areas.

Stability of Flight Vehicles: advanced mathematical models and novel experimental techniques are developed to study the flight behaviour of modern aircraft and missiles, especially at high angles of attack. Included are studies of static and dynamic stability parameters in five degrees of freedom; cross-coupling between lateral and longitudinal degrees of freedom; non-linear, hysteresis, and unsteady effects; and the sensitivity of predictions of flight behaviour to all these effects and parameters.

Trace Vapour Detection: sensitive techniques are developed for trace vapour detection utilizing gas chromatography, vapour concentrators, vapour sources and passive samplers. These techniques are being incorporated in the development of field hardware for the detection of hazardous chemicals such as pesticides, explosives, illicit narcotics, and selected building material off-gases.

Atmospheric Dispersion Research: The Laboratory studies the effect of the meteorological conditions on pesticide spray application and deposition, and defines optimum conditions for maximum spray efficiency in agricultural and forestry operations. Extensive field experiments are undertaken in New Brunswick and elsewhere.

Office for National Facilities for Science

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: B.H. Andrew, Director, Telephone: (613) 993-6543
Personnel: 1
Activities:

The National Research Council of Canada supports a number of projects and facilities for Canada which deal with various fields of research. In general, these facilities are partially funded by NRC and managed and operated by outside agencies. These cooperative ventures are as follows.
Canada-France-Hawaii Telescope (CFHT) - operated by the CFHT Corporation and built on the summit of Mauna Kea in the Hawaiian Islands, the 3.6 m telescope is shared by the three member nations and used by astronomers from around the world.

Canadian Synchrotron Radiation Facility (CSRF) - located near Madison, Wisconsin at the Synchrotron Radiation Centre (SRC) of the Physical Sciences Laboratory, University of Wisconsin, the CSRF provides a world-class source of synchrotron light for Canadians whose work requires radiation having special properties. CSRF is a National Facility owned and managed by the National Research Council of Canada, funded by the Natural Sciences and Engineering Research Council, and operated by a team of scientists from the University of Western Ontario. Operation is possible through the hospitality and cooperation of the SRC and the National Science Foundation of the United States of America.

Omni-purpose Apparatus for LEP (OPAL) - the OPAL experiment will examine the fundamental interactions among the recently discovered "Z" and "W" particles. It involves the design and construction of a detector which will be installed at one of the intersecting regions of a new colliding-beam accelerator called LEP (Large Electron Positron) at the Centre europ(en pour la recherche nucl{aire (CERN) in Geneva, Switzerland. The project involves 25 research institutions in 9 countries; the total cost to Canada is shared between the National Research Council of Canada and the Natural Sciences and Engineering Research Council.

Tri-University Meson Facility (TRIUMF) - the TRIUMF cyclotron, located on the campus of the University of British Columbia (UBC), is a unique National Facility for sub-atomic physics. Operated as a joint venture by UBC, Simon Fraser University, the University of Victoria, and the University of Alberta, the cyclotron is used for particle research (muon decay), the analysis of mineral ores, and for medical applications.

Space Division
Building M-60, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: G.M. Lindberg, Executive Director, Telephone: (613) 993-5494
Personnel: 27

Activities:

The Space Division *, recently established, consolidates all space related activities carried out by the NRC. Incorporating the activities of the Space Technology Program of the National Aeronautical Establishment and the Canada Centre for Space Science, the Division focuses on research and development in the areas of space science and space technology. The Division operates four major programs. Descriptions of each are listed below.

* Note: Current government plans regarding the creation of a Canadian Space Agency will lead to a transfer of the programs of NRC's Space Division.

Canadian Astronaut Program

Building M-60, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: B.A. Aikenhead, Telephone: (613) 993-4084
Activities:

The area includes the management of the Astronaut Program, the selection and training of astronauts, and the development of the experiments and their equipment. Following the successful flight of Marc Garneau in 1984, preparations are underway for Canadian astronauts to be involved in future flights, one to undertake a space-vision-system experiment, and a second to do life-science experiments.

Space Science and Facilities Program

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: G. Atkinson, Chief Scientist, Telephone: (613) 990-0788
Activities:

The Office provides opportunities for Canadian scientists to participate in high quality national and international space programs. Canadian space industries are therefore given opportunities to participate in the development of state-of-the-art technology. Technology transfer from the scientists in the program to industry is one major facet of the program.

The Office provides the major facilities required to do space science, and the planning and evaluation processes required to use them effectively. Engineering support for space experiments and project management for the development and construction of major new facilities are provided. The work funded by the Program is contracted to Canadian industries. Project funding for scientific research comes from the participating universities or government agencies or from the Natural Sciences and Engineering Research Council.

The Office is presently developing major new space instruments in cooperation with agencies in Sweden, Japan and the United States. Some of these instruments will fly SPACELAB, the European Space Agency contribution to the NASA Space Shuttle Program, others will fly in orbiting satellites.

Space Station Program

Building R-105, Montreal Road, Ottawa, Ontario, K1A 0R6
Contact: K.H. Doetsch, Telephone: (613) 993-0137
Activities:

The Office is responsible for the design, development, testing, building, and operation of the Mobile Servicing System, the Canadian contribution to the United States Space Station. NASA and its international partners (Canada, European Space Agency, Japan) are developing the Space Station to be assembled in space and permanently manned by 1994.

The Mobile Servicing System is a sophisticated sub-system of the Space Station, which will consist of a movable base with a servicing bay capable of accommodating and transporting large payloads, advanced control systems, a powerful robotic manipulator, dexterous manipulators to allow handling of a variety of specialized tasks, specialized tools, power and data systems, and a work station for astronauts during extra-vehicular activities.

User Development Program

100 Sussex Drive, Ottawa, Ontario, K1A 0R6
Contact: A.L. VanKoughnett, Telephone: (613) 990-0799
Activities:

The program will encourage the development of Canadian industrial capabilities to use the Space Station for space-based manufacturing.

PUBLIC WORKS CANADA

Architectural and Engineering Services, Government Realty Assets Support, Design, Construction and Realty Technology

Sir Charles Tupper Building, Riverside Drive, Ottawa, Ontario, K1A 0M2
Contact: M.G. Linklater, Acting Head - Corporate Reporting, Telephone: (613) 998-1169
Personnel: 58
Activities:

Objective: to effectively and efficiently provide technical advice, research and implementation support including technological improvements and standards development, to the government as a whole in relation to the design, construction, maintenance and operation of real property.

Description: because of the nature of its operational mandate and the attendant pool of professional and technical expertise, PWC is called upon to provide advice and support on construction and realty technology to a range of government clients. This includes the development of policies, standards and procedures, the conduct of applied research (often in conjunction with the National Research Council's Division of Building Research, the transferring technology to other departments and to industry, and providing related support services (such as making the Master Construction Specifications generally available).

Sub-Activities: technical standards and guidelines; applied research; technology transfer; interdepartmental and industry support; program planning and control.

Outputs: standards, policies and guidelines; investigations and research studies and reports; training courses, seminars and publications; technical support services; program direction.

Facilities:

Thermographic equipment: 1 AES C-20 system with 8 terminals; Testing equipment Six Cymbol Cybernetic Workstations (5 based on the CA computer and one to use on DEC VAX), Three 7585B Hewlett-Packard E-size pen plotters.

ROYAL CANADIAN MOUNTED POLICE

Science and Technology Program Support Section

Forensic Laboratory Services Directorate, R.C.M. Police, 1200 Alta Vista Drive, Ottawa, Ontario, K1A 0R2
Contact: Officer in Charge, S&T Program Support Section, Telephone: (613) 998-6340
Personnel: 4
Activities:

Canadian program of Science and Technology in Support of Law Enforcement; management of internal R.C.M.P. research and development; evaluation and management of unsolicited proposals received from Supply and Services Canada; maintenance of police R&D Data Base.

TRANSPORT CANADA

Navigational Aids Test Establishment

Blair Road, Cardinal, Ontario, K0E 1E0
Contact: J. Lorquet, Chief - Marine Aids, Telephone: (613) 998-1384
Personnel: 3
Activities:

A new Navigational Aids Test Establishment (NATE) was constructed and officially opened on a ten acre site 90 km south of Ottawa, at Cardinal, Ontario. The new buildings contain workshops and laboratories where the full range of conventional aids and associated equipment can be developmentally and qualificationally tested. Open air test pads around the main buildings have been arranged for the testing of externally mounted equipment and complete power packages. NATE was previously located at Prescott, Ontario.

CENTRAL ONTARIO

AGRICULTURE CANADA

Research Station: Vineland

Vineland, Ontario, L0R 2E0
Contact: Dr. D.R. Menzies, Director, Telephone: (416) 562-4113
Personnel: 52
Activities:

Vineland conducts research into fruits and vegetables, pest management and ornamentals.

ENVIRONMENT CANADA

Inland Waters Directorate - Ontario Region

867 Lakeshore Road, Burlington, Ontario, L7R 4A6
Contact: E.T. Wagner, Regional Director, Telephone: (416) 336-4531
Personnel: 88
Activities:

Water management, water data gathering, water investigations, socio-economic studies.

National Water Research Institute

867 Lakeshore Road, Burlington, Ontario, L7R 4A6
Contact: D. Egar, Executive Director, Telephone: (416) 336-4625
Personnel: 265
Activities:

The research program at the National Water Research Institute consists of flexible, multidisciplinary project teams, each focused on a high priority water issue. Projects are grouped generically into three Research Branches. The Lakes Research Branch investigates critical limnological processes which control the distribution, fate and effects of pollutants, particularly toxic chemicals, in Canadian lakes and large estuaries. The Rivers Research Branch investigates the complex physical, chemical and biological interactions in rivers and river basins affected by point-source and diffuse pollutants. The Research and Applications Branch develops advanced techniques for chemical analysis, conducts hydraulics research and provides istitute leadership for technology transfer to operational water management programs and the private sector. NWRI undertakes research and surveys of aquatic systems in specific programmes on lakes restoration, great lakes connecting channels, air-water interactions, (climate change, "toxic rain"), nutrient/contaminant interactions, sediment-water interactions, long range transport of airborne pollutants, river modelling, pesticide contamination, groundwater contamination, ecotoxicology, analytical chemistry, quality assurance and hydraulics studies.

Facilities:

Standard and specialized laboratory and field equipment; gas chromatograph.

Wastewater Technology Centre

867 Lakeshore Road, Burlington, Ontario, L7R 4A6
Contact: Mr. B. Jank, Associate Director - Burlington Environmental Centre, Telephone: (416) 336-4599
Personnel: 54
Activities:

Evaluates, develops and demonstrates physical, chemical and biological processes for treating wastewaters, and treatment, re-use, and disposal technologies for wastewater residues and hazardous wastes.

Facilities:

High-head pilot plant area; Mobile wastewater treatment demonstration units; fully equipped organic and inorganic laboratories; mini computers for process control

Water Quality Laboratory

867 Lakeshore Road, P.O. Box 5050, Burlington, Ontario, L7R 4A6
Contact: R. C. J. Sampson, Acting Chief, National Water Quality Laboratory Telephone: (416) 336-4563
Personnel: 42
Activities:

The National Water Quality Laboratory provides analytical, scientific and advisory services to Environment Canada's National Ambient Water Quality Monitoring programs for complex analysis of environmental samples of water, sediment, biota and other substrates. In addition, support is also provided to the CAPMON Program at AES, the Toxic Substances Program, the Canadian Environmental Protection Act, the Great Lakes Water Quality Program, the Pesticide Program and the Department of Fisheries & Oceans' Great Lakes Biological Monitoring Programs. The science base developed from these data also forms the basis for State of the Environment Reporting.

Facilities:

VG TRIBRID GC-MS-MS
Model 3583 ARL Industry Coupled Argon Plasma Spectrometers
Laboratory Information Management System with on-line data capture capability
State of the Art Fully Automated and Computer Controlled Spectrometry and Chromatography Laboratories
Radioimmunoassay System
Centrifugal Analyser
State of the Art Segmented Flow Analytical Systems

FISHERIES AND OCEANS

Bayfield Institute

867 Lakeshore Road, Burlington, Ontario, L7R 4A6
Contact: E. Lewis, Associate Director, Management and Technical Services, Telephone (416) 336-4828
Personnel: 118
Activities:

There are two Fisheries and Oceans Science components located at the Canada Centre for Inland Waters in Burlington, i.e. the regional Canadian Hydrographic Service, and the Great Lakes Laboratory for Fisheries and Aquatic Sciences. Together they constitute the Bayfield Institute.

The regional Canadian Hydrographic Service conducts hydrographic surveys for the production of navigational charts and related publications for the inland waters of Ontario and Manitoba and for marine waters of the Hudson Bay region and the central Arctic. Activities include hydrographic development, tides and water levels monitoring, chart compilation and cartographic development, and survey electronics. Research is conducted on sea ice classification by radar.

The Great Lakes Laboratory for Fisheries and Aquatic Sciences has its main component at the Canada Centre for Inland Waters, with two regional labs at Owen sound on Georgian Bay, and at Sault Ste. Marie on Lake Superior. Limnological and fisheries research and surveillance studies are conducted to determine the effects of the eutrophication and contaminants on Great Lakes' water quality, biota, biological community structure and productivity. Similar studies on smaller Ontario lakes, as part of a national program of monitoring and research, determine the impact of acid precipitation. Laboratory research in aquatic toxicology and contaminants dynamics is conducted to develop water quality objectives and methods for hazard evaluation and toxicity assessment in the field. An ultra-trace analytical chemicals laboratory located at CCIW serves the needs of fish research as well as fish product inspection. Other studies include: 1) fish habitat rehabilitation, 2) the effects of contaminants on conversion efficiency in natural food chains, and 3) the application of quantitative structure-activity relationships to hazard assessments of contaminants.

Facilities:

DATA COLLECTION AND PROCESSING: electronic positioning systems, digital and optical theodolites satellite positioning systems, echo sounders and sonar, radars, tide gauges and current meters, data loggers, digitizing tables, plotters and graphics terminals, computer-assited cartographic work stations, salinity profilers. COMMUNICATIONS: VHF and HF Radios, data collection platforms for satellite communications. VESSELS: The fleet includes the Limnos (45m), Bayfield (32m), Advent (23m) and Shark (16m), as well as numerous smaller craft. Used on vessels is the electronic acoustic fish censusing system.

METROPOLITAN TORONTO

ENVIRONMENT CANADA

Atmospheric Environmental Service: Headquarters

4905 Dufferin Street, Downsview, Ontario, M3H 5T4
Contact: L. Racine, Financial Planning Officer, Telephone: (416) 739-4172
Personnel: 932
Activities:

Air quality and inter-environmental research, climatological services, ice services, meteorological standards, EDP services, meteorological stores, financial services, personnel services.

Facilities:

Satellite receiving equipment; EDP equipment; Lab equipment; Radars; Airborne ice reconnaissance equipment (SLAR).

Atmospheric Environment Service: Ontario Region

25 St. Clair Avenue East, 3rd Floor, Toronto, Ontario, M4T 1M2
Contact: L. Racine, Financial Planning Officer, Telephone: (416) 739-4172
Personnel: 204
Activities:

Provision of meteorological services to the province of Ontario.

Facilities:

Weather radar; Upper atmospheric measurement equipment; Automatic weather stations; Other meteorological equipment; EDP equipment.

Environmental Protection Service: Toronto

25 St. Clair Avenue, Toronto, Ontario, M4T 1M2
Contact: D. Piersiak, Head - Financial and Administration Services, Telephone: (613) 996-5840
Personnel: 47
Activities:

The objective of Environmental Protection Service (EPS) is to ensure that human activities are conducted in a way that will achieve and maintain a state of the environment necessary for the health and well being of man, the health and diversity of species and of ecosystems and the sustained use of natural resources for social and economic benefit.

HEALTH AND WELFARE CANADA

Civil Aviation Medicine Units Laboratories

P.O. Box 1035, Station B, Downsview, Ontario, M3H 5V5
Contact: Aurel Brazeau, Financial Planning Officer, Telephone: (613) 954-8787
Personnel: 4
Activities:

Pathology research relating to Civil Aviation.

Facilities:

Chemical analysis equipment.

NATIONAL DEFENCE

Defence and Civil Institute of Environmental Medicine

P.O. Box 2000, Downsview, Ontario, M3M 3B9
Contact: A. Patrick, Program Control Officer, Telephone: (613) 996-5912
Personnel: 162

Activities:

Defence and Civil Institute of Environmental Medicine (DCIEM), is located on the Canadian Forces Base, Downsview, Ontario. The mission of DCIEM is to perform research and development to ensure the health and safety and effective utilization of man in any man-machine environment or in any adverse operational environment. The Institute also conducts cooperative work with non-military government departments, with industry, and universities. DCIEM is well equipped with modern facilities to simulate the various environments under study to perform human research in environments ranging from ocean depths, space, flight, to the arctic and the tropic.

Facilities:

Portable Decompression Chamber; Atmospheric Diving System; Human Centrifuge; Precision Angular Mover.

NATIONAL RESEARCH COUNCIL OF CANADA

Rehabilitation Technology Unit

Division of Electrical Engineering - N.R.C.
3781 Victoria Park Avenue, Unit 3, Scarborough, Ontario, M1W 3K5
Contact: J. Batelaan, Telephone: (416) 499-3222
Personnel: 11
Activities:

The unit develops technical aids for the handicapped by obtaining prototypes from the original developer and then coordinating production. Coordination includes project engineering, identifying manufacturers, and testing and evaluating pre-production units.

SOUTHWESTERN ONTARIO

AGRICULTURE CANADA

Health of Animals Laboratory: Guelph

110 Stone Road West, Guelph, Ontario N1G 3W4
Contact: Vicki Lauzon, Financial Officer, Telephone: (613) 995-5433
Personnel: 21
Activities:

Activities at this Laboratory are mainly concentrated on diagnosis and research. Research is focused on methodology development for meat microbiology so that tests for diagnostic functions can be improved and implemented.
Research is also being conducted on salmonella infection and contamination of livestock. In the salmonella research, use of genetic engineering is being exploited.

Facilities:

There are two level "D" containment laboratories. Specialized equipment for biotechnology - ultracentrifuge power supplies, gel boxes, transilluminator and Polaroid MP4 cameras; for Brucella - automated ELISA equipment, brucellamat; for meat bacteriology - Novasina water activity meter, automatic plater, fraction collector and Amicon ultrafiltration cell, hydrophobic grid membrane filter and an automated bacterial identification system.

Research Station: Delhi

P.O. Box 186, Delhi, Ontario, N4B 2W9
Contact: Dr. P.W. Johnson, Director, Telephone: (519) 582-1950
Personnel: 44
Activities:

Tobacco research and an alternate crops program are centered at Delhi.

Research Station: Harrow

Harrow, Ontario, N0R 1G0
Contact: Dr. C.F. Marks, Director, Telephone: (519) 738-2251
Personnel: 113
Activities:
Harrow conducts research into field crops, horticultural crops and green house vegetables.

Research Station: London

University Sub Post Office, London, Ontario, N6A 5B7
Contact: Dr. H.V. Morley, Director, Telephone: (519) 645-4452
Personnel: 68
Activities:
Research at London is centered on integrated pest management and environmental toxicology.

NORTHERN ONTARIO

AGRICULTURE CANADA

Experimental Farm: Kapuskasing

Kapuskasing, Ontario, P5N 2X9
Contact: Dr. J. Proulx, Superintendent, Telephone: (705) 335-6148
Personnel: 27
Activities:

The Kapuskasing Experimental Farm maintains a beef program, and a forage and cereals program.

Experimental Farm: Thunder Bay

P.O. Box 158, Postal Station F, Thunder Bay, Ontario, P7C 4V8
Contact: J. Wilson, Superintendent, Telephone: (807) 939-2523
Personnel: 5
Activities:

The Thunder Bay experimental farm conducts potato cultivar testing and maintains a small horticulture program.

ENERGY, MINES AND RESOURCES CANADA

Elliot Lake Laboratory

P.O. Box 100, 99 Spine Road, Elliot Lake, Ontario, P5A 2J6
Contact: Dr. R. Tervo, Manager, Telephone: (705) 848-2236
Personnel: 24
Activities:

Rockbursts, rock mechanics and ground control in mines; dust, ventilation and radiation measurement and control underground; mine tailings disposal and stabilization to minimize environmental impact.

Facilities:

Four million pound capacity rock testing press; radiation instrumentation calibration facility; ventilation and dust instrument calibration facility; x-ray diffraction equipment; extensive chemical and radioisotope analytical laboratories.

FORESTRY CANADA

Forest Pest Management Institute

1219 Queen Street East, P.O. Box 490, Sault Ste. Marie, Ontario, P6A 5M7
Contact: Dr. G. Green, Regional Director, Telephone: (705) 949-9461
Personnel: 81
Activities:

The research and development program of the Forest Pest Management Institute is devoted exclusively to the development of efficacious and environmentally acceptable pest management strategies that will assist forest managers in the achievement of forest management objectives. The Institute's research and development program is broad and complex. It includes the development of new or improved chemical insecticides and herbicides biological control agents, such as bacteria, viruses, fungi and protozoa and insect pheromones and growth regulators. A significant part of the program is concerned with development of equipment and technology for applying pest control materials accurately and effectively to the target, of assessing the environmental impact of products and strategies developed and at elucidation of the persistence, dynamic cycling and ultimate fate of pesticides and their breakdown products in the environment. Research complementary to the foregoing is concerned with cellular biology, immunology, tissue culture and systems analysis. In these areas, the Forest Pest Management Institute plays the lead role within the Canadian Forestry Service but works cooperatively with other Canadian Forestry Service regional forest research centres, provincial forestry agencies and other organisations.

Facilities:

The Institute is well equipped with standard instrumentation to allow research to proceed in the foregoing fields. In addition to the basic equipment required for the above, the Institute has an electron microscope, mass spectrophotometer, GC's, HPLC's, and other analytical equipment, spray chambers, a research spray aircraft, extensive insect, plant and pathogen production facilities and production and research greenhouses.

Great Lakes Forest Research Centre

1219 Queen Street East, P.O. Box 490, Sault Ste. Marie, Ontario, P6A 5M7
Contact: Dr. C.H. Winget, Regional Director General, Telephone: (705) 949-9461
Personnel: 169
Activities:

The Great Lakes Forest Research Centre is one of six regional forestry centres operated by the Canadian Forestry Service. It is involved in a program of forest research and regional forestry development in Ontario, and provides the primary federal focus for forestry in Ontario. A large portion of the research program is concerned with long-term wood supply. Various forest renewal projects are under way, with emphasis on black spruce ecosystem silviculture and the mechanization of silviculture. Substantial efforts are also directed at the reduction of losses from insects, diseases and fire. A major cooperative project that involves other elements of Forêts Canada as well as various provincial and federal agencies deals with the impact of long-range transport of air pollutants of forest ecosystems. The forestry development program is involved in negotiating and administering federal-provincial cost-sharing agreements with the province of Ontario, conducting economic studies, and implementing job creation programs in the forest sector.

Facilities:

Gas chromatograph; atomic absorption spectrometers; nitrogen analyzer; ion chromatograph; autoanalyzers; Freele drier; alkalinity meter; titroprocessor; ph meters; conductivity meter; carbon analyzer; autoclave sterilizers; Nikon photo-micrograph; Varian universal heaters; oscilloscope; portable photosynthesis system; Sartorious balances; Vax 750 computer system and accessories; microloggers.

MANITOBA

AGRICULTURE CANADA

Canola Council of Canada

433 Main Street, Winnipeg, Manitoba
Contact: Noel O'Connell, Director General, Grain Marketing Bureau, Telephone: (204) 996-8324 ext. 6616
Personnel: 1
Activities:

Promote improvement in the manufacture of Canadian rapeseed products through the Canada Utilization Assistance Program.

Health of Animals Laboratory: Winnipeg

408 Federal Building, 269 Main Street, Winnipeg, Manitoba, R3C 1B2
Contact: Vicki Lauzon, Financial Officer, Telephone: (613) 995-5433
Personnel: 9
Activities:

This Laboratory is involved in diagnostic procedures in the fields of serology and bacteriology. The serology section is involved in Brucellosis and E.I.A. diagnosis and provides a national serum survey and serum banking capability. Bacteriological activities involve the diagnosis of contamination of meat and meat products and the identification specific bacteria such as Salmonella, Campylobacter and Listeria. This lab also provides a Salmonella serotyping service for the branch.

Facilities:

Robotic liquid handling machine, two laboratory freeze driers, automated ELISA equipment.

Canadian Grain Commission - Grain Testing and Research

601-303 Main Street, Winnipeg, Manitoba, R3C 3G8
Contact: Nick Syzek, Chief, Financial Planning and Analysis, Telephone: (204) 983-2783
Personnel: 109
Activities:

Provides technical advice on the end-use quality of Canadian grains and oilseeds in support of quality control and marketing of Canadian grain responsibilities.

Facilities:

Grain pilot mill; image analyzer.

Research Station: Brandon

P.O. Box 610, Brandon, Manitoba, R7A 5Z7
Contact: E.E. Swierstra, Director, Telephone: (204) 728-7234
Personnel: 75
Activities:

The research objectives of the Brandon Research Station are:

- to improve economic returns to beef cow/calf producers in the eastern prairie region, through studies on lifetime productivity of the cow herd. Emphasis is on reproductive performance, and carcass quality;
- to improve economic returns to swine producers, through research on the reproductive potential of sows and boars, survival of newborn piglets, and carcass quality in market hogs;
- to develop crop production methods (barley, forage, corn) for the eastern prairies through improved soil and crop management and breeding improved varieties.

Research Station: Morden

P.O. Box 3001, Morden, Manitoba, R0G 1J0
Contact: Dr. J.B. Bole, Director, Telephone: (204) 822-4471
Personnel: 54
Activities:

The Morden Research Station is developing new and special crops adapted to the prairie region. Work in progress is on buckwheat, field peas, flax, sunflowers, potatoes, ornamentals, field beans, safflower, vegetables, monarda, lathyrus, and lentils. Work includes new variety development, crop management (including minor use registration of pesticides), storage and processing.

Research Station: Winnipeg

195 Dafoe Road, Winnipeg, Manitoba, R3T 2M9
Contact: Dr. T.G. Atkinson, Director, Telephone: (204) 269-2100
Personnel: 107
Activities:

The research objectives of the Winnipeg Research Station are:

- To develop improved wheat and oat varieties for the eastern prairie region, where resistance to leaf and stem rust is essential. Cereal chemists and pathologists support the other Agriculture Canada cereal breeding programs as well as private sector and university breeders.
- To protect oilseed and special crops in Manitoba from insect pests. Methods of control include chemical, biological, cultural, and host resistance.
- To protect stored crop and crop products from insect pests and fungal mycotoxins. The research supports on-farms storage, the milling and food processing industries, and the Canadian export trade.

ATOMIC ENERGY OF CANADA LIMITED

Whiteshell Nuclear Research Establishment

Pinawa, Manitoba, R0E 1L0
Contact: Stephen Hall, Program Officer, Telephone: (613) 236-6444
Personnel: 952
Activities:

Programs are mainly focussed on nuclear fuel waste management and on nuclear reactor safety research. The Whiteshell Nuclear Research Establishment (WNRE) directs the research on disposal of used fuel and fuel recycle wastes. This includes research on fuel waste immobilization, geotechnical research to develop methods of characterizing the rock formations that might host the disposal vault, the environmental and safety assessment to predict radionuclide migration from such disposal. The nuclear reactor safety program is intended to improve our understanding of nuclear reactor behavior under postulated loss-of-coolant accident conditions. This includes research work on the thermalhydraulics of the reactor heat transport system, on the thermal-mechanical behavior of fuel and fuel channels, and on the containment atmosphere. Other work at WNRE includes fundamental investigations of the biological effect of radiation, and basic research in chemistry and materials science.

Facilities:

RD-14 Thermalhydraulic Test Loop; Containment Test Facility; Underground Research Laboratory (under construction); Slowpoke Reactor (under construction).

ENVIRONMENT CANADA

Atmospheric Environment Service: Central Region

266 Graham Avenue, Winnipeg, Manitoba, R3C 3V4
Contact: L. Racine, Financial Planning Officer, Telephone: (416) 739-4172
Personnel: 254

Activities:

Provision of meteorological services to the provinces of Manitoba and Saskatchewan and the central portion of the Northwest Territories.

Facilities:

Weather radar; Upper atmospheric measurement equipment; Automatic weather stations; Other meteorological equipment; EDP equipment.

FISHERIES AND OCEANS

Freshwater Institute

501 University Crescent, Winnipeg, Manitoba, R3T 2N6
Contact: Dr. R.M. McMullen, Regional Director of Science, Telephone: (204) 983-2420
Personnel: 275
Activities:

The Freshwater Institute is the F&O Regional headquarters for Ontario, the prairie provinces and the Northwest Territories. It provides facilities for fisheries and environmental research, as well as for non-research activities of the Region such as fisheries inspection, fisheries management, economic analysis and administration. It is the major Canadian centre for freshwater and Arctic fisheries research, including marine mammals and fish habitat.

Research on fish habitat and limnology emphasizes mechanisms and processes of biological production and decomposition in lakes, and includes studies related to energy development and use, acidification, radionuclide and heavy metal pollution, hydroelectric reservoirs, and toxic chemicals. Research in the development of fisheries resources includes intensive aquaculture using waste heat, pilot fisheries enhancement studies of large lakes, stream rehabilitation, and studies of fish diseases. Arctic research emphasizes commercially important fish and marine mammals and associated ecosystems. Scientific disciplines at the Freshwater Institute include population biology, limnology, fisheries biology, organic and inorganic chemistry and toxicology, marine mammal biology, hydrology, and associated fields. Studies are carried out in laboratories at the Freshwater Institute, and in field stations located at various latitudes ranging from north temperature to mid-Arctic (i.e. from 50 to 75 degrees north).

Facilities:

Wet labs for holding live fish. Extensive inventory of scientific equipment, including chromatographs and scanning electon microscope. Major field camps are the Experimental Lakes Area (55km east of Kenora, Ont.), Rockwood Experimental Hatchery (65km north of Winnipeg), Dauphin Lake field camp (Man.) South Indian Lake field camp (Man.), Resolute field camp (N.W.T.), and other smaller seasonally-operated camps in the N.W.T.

NATIONAL RESEARCH COUNCIL OF CANADA

Canadian Institute of Industrial Technology

Division of Electrical Engineering, N.R.C.
435 Ellice Avenue, Winnipeg, Manitoba, R3B 1Y6
Contact: W.C. McGregor, Telephone: (613) 949-7963
Activities:

The Canadian Institute of Industrial Technology, owned and operated by the National Research

Council of Canada, has been designed as a complete research environment for technical teams from industry, university, and government, and as a national centre for information on industrial technology. The Institute will be a focal point for integrated industrial research programs of national scope directed to specific industrial sectors - for example, the resource industries, the construction-related manufacturing sector, or the aerospace field.

Robotics and Automation Unit

Contact: M.S. Barakat, Telephone: (613) 949-7693
Activities:

In recent years, NRC has developed active research programs in automated technology at centres in Ottawa and Montreal. As a third centre of expertise, a team of specialists is being established at the Canadian Institute of Industrial Technology in Winnipeg to provide a full range of services to occupants.

Major areas of applied R&D will include artificial intelligence, robotics, automation, computer-integrated manufacturing and production, and flexible manufacturing systems.

The Institute is being furnished with modern research equipment and pilot-production facilities either unavailable to or beyond the means of most individual firms.

SASKATCHEWAN

AGRICULTURE CANADA

Health of Animals Laboratory: Saskatoon

116 Veterinary Road, Saskatoon, Saskatchewan, S7N 2R3
Contact: Vicki Lauzon, Financial Officer, Telephone: (613) 995-5433
Personnel: 39
Activities:

This laboratory, which is located on the campus of the University of Saskatchewan, contains two sections: Chemical Residue Analysis and Infectious Diseases. The Chemical Residue Analysis Section is concerned with diagnosis and research in the detection of potentially harmful chemical residues in meat and meat products. The Infectious Diseases Section performs diagnostic and research activities on brucellosis and other diseases affecting domestic animals and also their interaction with wildlife species. Disciplines involved in these programs include chemistry, biochemistry, bacteriology, immunology and pathology.

Facilities:

Mass spectrometer; atomic absorption spectrophotometer; gas and high performance liquid chromatographs. Biocontainment units, enzyme - linked inmmunosorbent assay (Elisa).

Experimental Farm: Indian Head

Indian Head, Saskatchewan, S0G 2K0
Contact: Mr. M. Maw, Officer - In-Charge, Telephone: (306) 695-2274
Personnel: 21
Activities:

At the Indian Head Experimental Farm, emphasis is on weed control and crop management for cereals (including winter wheat) and special crops. Canadian plant breeders are supported by the operation of the winter plant breeding nursery at Brawley, California. Seed of new crop varieties, developed by Agriculture Canada, is increased and distributed.

POS Pilot Plant Corporation

118 Veterinary Road, Saskatoon, Saskatchewan
Contact: Dan Fenety, Director General, Priorities and Strategies, Telephone: (306) 996-8324 ext. 6679
Personnel: 1
Activities:

Promote increased processing of grain and oilseed into marketable products. Encourage and promote the development and increase of value-added agriculturally based products for domestic and export markets.

Research Station: Melfort

P.O. Box 1240, Melfort, Saskatchewan, S0E 1A4
Contact: Dr. S.E. Beacom, Director, Telephone: (306) 752-2776
Personnel: 48
Activities:

The research objectives at the Melfort Research Station are:

- to develop soil and crop management practices for cereal grains, oilseeds, forage and special crops with adaptation to the short season, rainfall, and soils of the parkland region; and
- to develop improved pasture management systems for beef cow/calf producers in the parkland region.

Research Station: Regina

P.O. Box 440, Regina, Saskatchewan, S4P 3Z2
Contact: Dr. J. Dueck, Director, Telephone: (306) 780-7400
Personnel: 43
Activities:

The research at Regina is directed towards controlling weeds in cultivated crops and pastures, through the use of herbicides and biological controls. The work includes safety in the application of chemical herbicides and the dissipation of herbicides in the environment.

Research Station: Saskatoon

107 Science Crescent, Saskatoon, Saskatchewan, S7N 0X6
Contact: Dr. J.R. Hay, Director, Telephone: (306) 975-7014
Personnel: 110
Activities:

The research objectives of the Saskatoon Research Station are:

- to develop improved varieties of canola, mustard, and forage crops. Emphasis is on quality, yield, insect and disease resistance. Saskatoon is a lead station in the application of new biotechnology procedures to crop improvement; and
- to develop methods for the control of crop pests and diseases, including, wheat midge, grasshoppers, root rot, and foliar diseases in cereal grains, and Bertha armyworm, sclerotinia wilt, and blackleg disease in canola.

At the Scott Experimental Farm, emphasis is on weed control and crop management practices for cereal grain and oilseed production in the northeastern region of Saskatchewan.

Research Station: Swift Current

P.O. Box 1030, Swift Current, Saskatchewan, S9H 3X2
Contact: B.H. Sonntag, Director, Telephone: (306) 773-4621
Personnel: 117
Activities:

Research at Swift Current is directed towards developing soil management and crop production practices for the semi-arid conditions in the brown soil zone of the southern prairie region. Soil and water conservation, and soil salinity are important. Crop research is on wheat, rye, forage crops, and the development of an annual legume crop for nitrogen fixation and soil conservation during the summerfallow year. Turkey nutrition research is aimed at improved production efficiency and product quality.

ENVIRONMENT CANADA

Inland Waters Directorate, Conservation and Protection - Western and Northern Region

1901 Victoria Avenue, Regina, Saskatchewan, S4P 3R4
Contact: R.A. Halliday, Director, Telephone: (306) 780-5319
Personnel: 195
Activities:

The Directorate collects and interprets water quantity and quality data and provides information, advice and recommendations related to water resource planning and management, particularly in an interjurisdictional context.

Facilities:

1. Approximately 200 satellite data collection platforms.

2. Analytical equipment for analysis of water samples (inorganic).

3. A typical collection of electronic data processing equipment including digitizers, CD-ROM readers, etc.

National Hydrology Research Institute

11 Innovation Boulevard, Saskatoon, Saskatchewan, S7N 3H5
Contact: Simon Ommanney, Chief Scientific Information System, Telephone: (306) 975-5761
Personnel: 79
Activities:

Institute research projects are grouped in three programs: hydrologic processes and climate change, sustainable development, and northern water systems.

Hydrological Processes and Climatic Change

Global warming may result in increased evaporation and transpiration of water into the atmosphere, but these processes are difficult to measure and predict. In fact, researchers in different areas are using different models to measure and predict evaporation and transpiration, and these models are not always in agreement. Scientists in NHRC's Hydrology Division are working with a number of researchers from other organizations to evaluate these models and attempt to determine which most accurately describes evaporation and transpiration processes in Canada.

It has always been difficult to obtain accurate data to describe many hydrological processes, but new technologies, such as "remote sensing" by satellite, are helping scientists to obtain the data they need. NHRI and HRD scientists are involved with a number of studies into the ways remote sensing can be applied to hydrological and climatological problems. By combining data obtained by satellite with ground measurements, researchers can uncover a wealth of new information on present-day hydrological situations as well as models to help forecast the future patterns. Some of the individual studies in this area are concerned with remote sensing for snow cover, basin run-off, moisture fluxes, transpiration, and the physical properties of snow.

Many of NHRC's hydrology and climatic change studies deal with specific aspects of the hydrological cycle that are not well understood. These include the effects of multiple freeze-thaw cycles on soils and ground water, the hydrology of tills, and land-drainage modelling.

Another series of studies at NHRC deal with the properties of glaciers and their implications for climatic change. Many glaciers in Canada's coastal mountains are shrinking, and this situation has great implications for climatic change and water supply. Studies to monitor glaciological mass blances and other properties of glaciers are being conducted by NHRI scientists and numerous collaborators from other agencies.

Studies related to historical climate are also underway at NHRC. One of these deals with the derivation of historical climate data by proxy from glacier ice cores. Layers of ice in permanent glacial fields have preserved atmospheric elements from the time they were formed, as much as 300 years ago. The ratios of different oxygen isotopes have a direct correlation to temperature and precipitation levels, enabling researchers to reconstruct climate patterns hundreds of years old.

Sustainable Development

NHRC scientists are working in different fields on studies related to the effects of agricultural, industrial, and urban development on water systems.

Modern agricultural methods strongly affect the water regime. Irrigation, and increased use of herbicides and pesticides, are placing new stresses on water quality and supply. Irrigation can disrupt normal drainage and flow patterns, and alter the quatities of pesticides, nutrients, and herbicides carried through the water system. At Outlook, Saskatachewan, studies are underway to establish the transportation and fate of herbicides and pesticides carried by run-off water and ground water.

Pollutants such as pesticides or industrial waste can adversely affect ground water. Pesticides of all kinds are a vital part of modern agriculture, but little is understood about their capacity to affect the quality of groundwater. NHRC has developed a new experimental facility, called the Facility for Indoor Aquifer Testing (FIAT) which enables researchers to examine the interactions between contaminants, water, and the soil under controlled laboratory conditions. The FIAT is a large vertical cylinder which is instrumented to provide for large scale tests and measurement of ground water quality as it seeps down through the soil mass.

Other studies deal with the ground water contamination near landfill sites. Contaminant infiltration from disposal sites is not well-understood, but may be a potential hazard at landfill sites. Methods to control the dispersal of undesirable leachates from dumps without the need to pump or treat the waste water are being explored.

Industrial activities also can have great effects on the health of water systems. The release of nutrients such as phosphorus and toxic metals such as mercury into rivers and lakes has greatly affected the aquatic populations living in them. Often the long-term health of the ecosystem can be undermined because of high levels of these substances in them. NHRC scientists are studying these effects at sites in British Columbia and Manitoba, and are developing new experiments in Saskatchewan.

Northern Water Systems

NHRI studies within this program include: the hydrology of the Mackenzie River delta; the mechanics of river ice jams; the hydrology of permafrost zones; water balance and supply in permafrost basins; the response of permafrost and its cover to climatic change; the dynamics of river-ice break-up; water quality in northern lakes and rivers.

Special equipment

- Facility for Indoor Aquifer Testing (FIAT): Designed by NHRI scientists, this device -- a large, sediment-filled tank situated beneath a computer-controlled sprinkler system -- will enable scientists to study the movements and interactions of water, soil, contaminants and nutrients under controlled laboratory conditions that simulate actual environmental conditions.

- Soil-water freezing apparatus: Designed by NHRI scientists, the device facilitates controlled axial freezing of a soil-water mixture in order to study the effects of thermal and chemical perturbations on frozen soil.

- Scanning Electron Microscope (SEM)

- Pneumatic pore squeezer.

- X-Ray Diffractometer.

- UV-visible spectrophotometer.

- Rufli-Rand ice-core drill.

NATIONAL RESEARCH COUNCIL OF CANADA

Prairie Regional Station, Institute for Research in Construction, N.R.C.

110 Gymnasium Road, University of Saskatchewan, Saskatoon, Saskatchewan, S7N 0W9
Contact: C.P. Hedlin, Telephone: (306) 975-4203
Personnel: 16
Activities:

The Station provides technical information to the construction industry in the three prairie provinces for improved design, construction, and operation of buildings and other structures. This objective is pursued through applied research projects and technical information services.

Plant Biotechnology Institute

110 Gymnasium Road, University of Saskatchewan, Saskatoon, Saskatchewan, S7N 0W9
Contact: W.F. Steck, Director, Telephone: (306) 975-4191
Personnel: 102
Activities:

The Institute carries out research to find new exploitable methods for genetic alteration of plants and for biochemical control of plant development in agriculture, forest tree production, medicinal products, and industrial processes. The cell and molecular biology of higher plants are the basis for genetic engineering projects at PBI. Collaboration with other research organizations is actively promoted and sought by the Institute. Descriptions of the specific research groups are listed below.

Biotechnology Development Unit
Contact: W.G.W. Kurz, Telephone: (306) 975-5570
Activities:

PBI's Biotechnology Development Unit transfers new biotechnology from foreign countries to Canada, liaises with Canadian industry, and disseminates information about plant biotechnology to Canadian research partners.

Cell Technology Section
Contact: K. Kartha, Telephone: (306) 975-5575
Activities:

The Section develops techniques in protoplast and cell culturing, regeneration from protoplasts, somatic hybridization, plant cloning, cellular biochemistry and physiology, somaclonal and other sources of variation, germplasm storage, and cryobiology. Present research aims to improve cereal grains, oilseed species, special crops, and conifer trees. As well, the section maintains an electron microscope facility.

Gene Technology Section
Contact: W.L. Crosby, Telephone: (306) 975-5241
Activities:

The Section develops techniques for vector construction, gene mapping and sequencing, DNA and RNA manipulation, and gene transfers with emphasis on the expression of foreign genes in plants. Project work is being done on nitrogen fixation and photosynthesis.

ALBERTA

AGRICULTURE CANADA

Health of Animals Laboratory

P.O. Box 640, Lethbridge, Alberta, T1J 3Z4
Contact: Vicki Lauzon, Financial Officer, Telephone: (613) 995-5433
Personnel: 58
Activities:

Research is mainly focused on respiratory, reproductive and neonatal problems in beef cattle with particular emphasis on the role and interaction of viruses, bacteria and mycoplasmas as well as the comparative relationships between management and disease in intensive and extensive production systems. Other research projects include studies on bovine herpes virus, leptospirosis, scrapie, clostridial diseases, and Arctic fox rabies. Disciplines involved are pathology, bacteriology, virology, immunology, clinical research. Diagnostic test service in these disciplines are also provided in support of federal disease control, eradication and certification programs in Western Canada.

Facilities:

Large animal environmental chamber; environmental control chamber; millipore, two-stage filtration system; micro-computer - two DEC Rainbow 100 (with peripherals); camera, photomicrographic, orthoplan; camera, auto-F/microscope, Reichart; video recorder and monitor - with camera - RCA.

Experimental Farm: Fort Vermilion

Fort Vermilion, Alberta, T0H 1N0
Contact: Mr. B. Siemens, Superintendent, Telephone: (403) 927-3253
Personnel: 9
Activities:

The Experimental Farm at Fort Vermilion is the most northerly component of Agriculture Canada's northern research group and, together with Beaverlodge, is historically and traditionally associated with frontier and development type of northern agriculture. Research activities include studies of the effect of climate on seeding dates, and fertilizer rates for cereal, oilseed and forage crops.

Research Station: Beaverlodge

P.O. Box 29, Beaverlodge, Alberta, T0H 0C0
Contact: Dr. J.D. McElgunn, Director, Telephone: (403) 354-2212
Personnel: 65
Activities:

Work at the Beaverlodge Research Station and the Fort Vermilion Experimental Farm is for the adaptation of crops and cropping practices to the Peace River region of nothern Alberta and British Columbia, plus limited work on behalf of the Yukon and Northwest Territories. The predominant crops are barley, canola, wheat, forages, grasses, and legumes for seed and honey. Crop management research involves adaptation to acidic soils, poorly textured grey-wooded soils, a short growing season, with long, sunny days. New variety development includes canola, barley, and wheat.

Research Station: Lacombe

Lacombe, Alberta, T0C 1S0
Contact: Dr. D.E. Waldern, Director, Telephone: (403) 782-3316
Personnel: 85
Activities:

The Lacombe Research Station and the Vegreville substation serve the central Alberta parkland region which contains a major proportion of Alberta black and solonetzic soils. Soil and crop management practices are being developed for wheat, barley, oats, forage, and canola production.

Red meats research includes the control of PSE pork (pale, soft, exudative), support to the national beef and swine carcass grading systems, effects of production practices on carcass quality, and effects of meat processing practices on meat quality and consumer acceptance.

Research Station: Lethbridge

Lethbridge, Alberta, T1J 4B1
Contact: Dr. D.G. Dorrell, Director, Telephone: (403) 327-4561
Personnel: 277
Activities:

The Lethbridge Research Station and the substations at Onefour, Vauxhall, and Stavely, serve the southern Alberta region, which has a diversity of farming practices, from specialty crop production under irrigation to beef cow/calf production under rangeland conditions.

Livestock research is concerned with the effects of breed and selection methods on the improvement of beef cattle, and of breed and management on sheep productivity. Efficient methods of beef production are developed through nutrition, rumen microbiology, and the control of insect pests.

Research on crop production and improvement deals with the control of plant diseases and insect pests and crop management practices related to soil fertility, tillage, and the use of irrigation water. Plant breeding research deals with 12 crop species, including wheat, alfalfa, potatoes, corn, barley, safflower, field beans, and soybeans.

Western Laboratory - Services Division

102-11th Avenue, S.E., Calgary, Alberta, T2G 0X5
Contact: Mr. Ralph Onciul, Director, Telephone: (403) 231-5741
Personnel: 32
Activities:

This Laboratory provides physical, chemical and biological testing services in support of inspections, quality and safety assurance programs of the Food Protection and Inspection Branch, on food products (meat, egg, dairy, fruit and vegetable products) and agricultural inputs (feeds, fertilizers, seeds and pesticides) for the western regions. Analytical methodology research is conducted in order to maintain state-of-the-art quality service on a timely and reliable basis.

ENERGY, MINES AND RESOURCES CANADA

Devon Coal Research Centre

1, Oil Patch Drive
Devon, Alberta T0C 1E0
Contact: T.D. Brown (403) 987-8214 Facs (403) 987-3430
Personnel: 60
Activities:

Physical and chemical characterization of coal and bitumen/oil emulsions. Bench-scale, pilot plant and plant-site evaluations of coal and oil sands/heavy oil processing. On-site assessments of water treatment and dewatering operations, using mobile plants. Collaborative research in respirable dust, ventilation, methane, strata mechanics and advanced technology in coal and oil sands mines.

Fuel Processing Research Laboratory

P.O. Bag 1280, # 1 Oil Patch Drive, Devon, Alberta, T0C 1E0
Contact: N. Andersen, Assistant Lab Manager, Telephone: (403) 987-8226
Personnel: 22
Activities:

The Fuel Processing Research Laboratory performs research in coal-cleaning and coal-washery waste clean-up and the separation of bitumen-water emulsions produced during heavy-oil extraction processes. The objective of the coal cleaning and waste clean-up programs is to provide the coal industry with effective and economic technology for the removal of sulphur and ash so as to upgrade product quality to maintain and increase the Canadian share of the Pacific Rim market. The basic development of concepts is carried out in bench-scale experiments and developed into engineering design data using the 10 t/hr pilot coal cleaning plant. This pilot plant is unique in Canada and rare in the world and is frequently used in joint industry/government research programs. New facilities include mobile pilot plants for the performance of on-site field experiments at both heavy-oil recovery and coal cleaning plant locations.

Facilities:

Mobile Washplants (4 in all); 10 ton per hour pilot plant; 70 barrels per day emulsion treatment plant; Analytical instruments - MNR spectromter, FTIR spectrometer, Laser Raman spectrometer, electro-phoretic mobility instrument.

Institute for Sedimentary and Petroleum Geology

3303-33rd Street N.W., Calgary, Alberta, T2L 2A7
Contact: W.W. Nassichuk, Telephone: (403) 292-5376
Personnel: 156
Activities:

Geology of sedimentary basins of western and arctic Canada structural geology and model studies, tectonics, geomathematical resource studies; invertebrate paleontology, palynology, paleobotany, stratigraphy and sedimentology; clay mineralogy, coal geology, petroleum geology and organic geochemistry. Assessment of petroleum and coal resources, geochemical instrumentation computer-based analyses of geochemical and hydrocarbon coal data.

Facilities:

Computer capability for data storage and evaluation of petroleum, natural gas and coal resources equipment for geochemistry, clay mineralogy, carbonates, paleontology, palynology labs, electronics shop, and machine shop data processing equipment, cartographic and photographic equipment. State-of-the-art technology include a twinned gas chromatography mass spectometry facility and leading computer software for petroleum resource evaluation.

Geophysical Observatory: Priddis

P.O. Box 57, Midnapore, Alberta, T0L 1J0
Contact: Dr. J. Popelar, Head - Geodynamics/Geophysics Divisions, Telephone: (613) 992-5419
Personnel: 2
Activities:

Monitoring of the earth's rotational dynamics and the stability of a primary reference and calibration point for astronomical and satellite observations. The Observatory contributes data daily to the international time and polar motion services and assures precise orbit determination for navigational, geodetic and geophysical satellites over Western Canada.

Facilities:

Photographic Zenith Tube (PZT); TRANET Satellite Tracking Station; HP-1000 Mini-computer and data communication equipment; Cesium Beam Frequency Standard.

Surface Mining Laboratory

P.O. Box 1280, # 1 Oil Patch Drive, Devon, Alberta T0C 1E0
Contact: D.B. Stewart, Laboratory Manager, Telephone: (403) 987-8238
Personnel: 15

Activities:

The Surface Mining Laboratory performs research in surface coal and oil sands mining. The general objective of the coal and oil sands R&D efforts is to enhance the international competitive position of those industrial sectors. Major thrusts include geotechnical engineering, advanced technology, operations research and spontaneous combustion. Most projects are undertaken in the field with active industrial co-operation. Cost-shared contracts are let to producing mines to demonstrate technology of broad generic interest.

Facilities:

- Spontaneous combustion evaluation
- Microhardness rock testing

ENVIRONMENT CANADA

Atmospheric Environmental Service: Western Region

Twin Atria Building, 4999-98th Avenue, 2nd Floor, Edmonton, Alberta, T6B 2X3
Contact: L. Racine, Financial Planning Officer, Telephone: (416) 739-4172
Personnel: 270
Activities:

Provision of meteorological services to the province of Alberta, the Yukon and the western part of the Northwest Territories.

Facilities:

Weather radar; Satellite receiving equipment; Upper atmospheric measurement equipment; Automatic weather stations; Other meteorological equipment; EDP equipment.

Canadian Wildlife Service - Western and Northern Region

4999-98 Avenue, Edmonton, Alberta, T6B 2X3
Contact: G. Kerr, Director, Telephone: (403) 420-2536
Personnel: 75
Activities:

Migratory birds conservation; wildlife research and conservation; wildlife management and administration.

Environmental Protection Service: Edmonton

9942-108 Street, Edmonton, Alberta, T5K 2J5
Contact: G. Klassen, Regional Financial Officer, Telephone: (403) 468-8054
Personnel: 73
Activities:

The objectives of the Environmental Protection Service (EPS) is to ensure that human activities are conducted in a way that will achieve and maintain a state of the environment necessary for the health and well being of man, the health and diversity of species and of ecosystems and the sustained use of natural resources for social and economic benefit.

FORESTRY CANADA

Northern Forest Research Centre

5320-122 Street, Edmonton, Alberta, T6H 3S5
Contact: Denis G. Benke, Senior Finance Officer, Telephone: (403) 435-7226
Personnel: 148

Activities:

Research into:

1) insect and disease management systems and surveys;
2) environmental impact of toxic substances and vegetation management;
3) wetlands and climate;
4) regeneration and plantation management;
5) nursery management and tree improvement;
6) stand productivity and forest inventory;
7) fire management systems;
8) forest hydrology;
9) resource economics.

Facilities:

Inductively coupled plasma spectrometer; scanning electron microscope.

NATIONAL DEFENCE

Defence Research Establishment: Suffield

Ralston, Alberta, T0J 2N0
Contact: A. Patrick, Program Control Officer, Telephone: (613) 996-5912
Personnel: 201
Activities:

Defence Research Establishment: Suffield (DRES), located at the CFB Suffield, Ralston, Alberta in addition to its laboratories has access to a secure serviced test area of about 1,000 square miles and its programs have a large field testing component. DRES conducts basic and applied research on medical and chemical aspects of chemical defence, microbiology, chemical and biological defence training, aerial targets and RPV's, mine/countermine warfare, military engineering applications, vehicle mobility research and the disposal of hazardous and toxic materials.

BRITISH COLUMBIA

AGRICULTURE CANADA

Health of Animals Laboratory: Vancouver

13-3071 #5 Road, Richmond, British Columbia, V6X 2T4
Contact: Vicki Lauzon, Financial Officer, (613) 995-5433
Personnel: 8
Activities:

The Laboratory operates primarily as a diagnostic centre by providing serological, bacteriological and virological functions to support branch disease control programs.

Facilities:

Two level "C" containment rooms; automated computer controlled Elisa system.

Experimental Farm: Prince George

R.R. #8, R.M.D. #6, Prince George, British Columbia, V2N 2H8
Contact: Mr. W.L. Pringle, Superintendent, Telephone: (604) 963-9632
Personnel: 14
Activities:

Assists the Kamloops Research Station in servicing the diverse rangelands of interior British Columbia.

Research Station: Agassiz

P.O. Box 1000, Agassiz, British Columbia, V0M 1A0
Contact: Dr. J.M. Molnar, Director, Telephone: (604) 796-2221
Personnel: 67
Activities:

Crop research involves field and greenhouse vegetable production, the storage of vegetables, the management of small fruits, including kiwifruit, and a wide variety of fertility and soil management problems.

Poultry research for egg and meat production is directed toward the control of SDS (sudden death syndrome) and leg weakness as well as nutrition, water quality, and housing requirements. The research program on nutrition of dairy cattle is supported by research on the production of forage crops.

Initiatives, under the Economic and Regional Development Agreement between the federal and provincial governments, to reduce vegetable imports through season extension.

Research Station: Kamloops

3015 Ord Road, Kamloops, British Columbia, V2B 8A9
Contact: Dr. J.A. Robertson, Director, Telephone: (604) 376-5565
Personnel: 41
Activities:

The research programs at the Kamloops Range Research Station and the Prince George Experimental Farm serve the farmlands and the beef cattle ranches of the southern and central interior of British Columbia. Research is on range management, poisonous plants, and forages. The multiple use of public lands by ranchers, the logging industry, and for recreational purposes are important concerns.

Research Station: Sidney

8801 East Saanich Road, Sidney, British Columbia, V8L 1H3
Contact: Dr. J. Molnar, Director, Telephone: (604) 656-1173
Personnel: 31
Activities:

The Station has two responsibilities. First it is a research centre oriented to solving problems and giving direct service to the ornamentals and vegetable industries. Emphasis is placed upon plant nutritional and physiological problems and upon pest control in vegetables and ornamentals. Research on green house energy conservation is also done. The second responsibility of the Station is for the national post-entry quarantine program for Canada.

Research Station: Summerland

P.O. Box 880, Penticton, B.C. V2A 7G1
Contact: Dr. D.B. Cumming, Director, Telephone: (604) 494-7711
Personnel: 93
Activities:

Research at Summerland is directed toward improving the production and utilization of tree fruits and grapes with emphasis on production efficiency, cost of production, and product quality. A substation is located at Kelowna. The research problems include plant nutrient deficiencies in soils, cold-hardiness, pruning and tree-training systems for denser plantings, breeding cherries for resistance to splitting, breeding apples for domestic production of a green variety, protection against insect and disease pests, and post-harvest storage diseases. Cooperative involvement in research with food processing companies extend Canada-wide.

Initiatives, under the Economic and Regional Development Agreement between the federal and provincial governments, to develop and evaluate biological control of crown rot of fruit trees.

Research Station: Vancouver

6660 N.W. Marine Drive, Vancouver, British Columbia, V6T 1X2
Contact: Dr. D.M. Weintraub, Director, Telephone: (604) 224-4355
Personnel: 58
Activities:

The Vancouver station responds to the insect pest and disease problems of small fruit and vegetable growers. Emphasis is on minimal use of chemical pesticides through biological control and resistance of the crops. Work in progress is on pests of potatoes, onions, carrots, lettuce, peas, raspberries, blueberries, cranberries, strawberries, and apples.

The station specializes in plant viruses and virus diseases, including work on diagnostic tools, using modern biotechnology procedures, for regulatory and certification purposes. This research contributes to the control of little cherry disease, and tomato ringspot virus in raspberry, and also to the production of virus-free seed potatoes.

Initiatives, under the Economic and Regional Development Agreement between the federal and provincial governments, to develop and transfer computerized pest management technology to producers of potatoes, onions, carrots and strawberries.

ENERGY, MINES AND RESOURCES CANADA

Cordilleran and Pacific Geoscience Division

100 West Pender Street, 6th Floor, Vancouver, British Columbia, V6B 1R8
and
P.O. Box 6000, Sidney, British Columbia, V8L 4B2
Contact: Dr. D. Tempelman-Kluit, Telephone: (604) 666-0529 or (604) 356-6451 (Sydney)
Personnel: 77

Activities:

Cordilleran and Pacific Geoscience Division: Geological and geophysical studies of the Canadian Cordillera and the Canadian Pacific Continental Margin: structure, stratigraphy, sedimentology, paleontology, petrology, metallogeny, geochronology, seismic studies, magnetics, volcanology, regional syntheses; marine bedrock geology and geophysics including studies of polymetallic sulfides on the Juan de Fuca ridge, coastal geology, geology of estuaries, offshore surficial deposits; electromagnetic induction in the crust, engineering seismology studies, tectonophysics, strong motion theoretical studies, application of gravity to geological problems, crustal and upper mantle structure and isostasy.

Facilities:

Marine geophysical and geological survey equipment including: coring equipment, HUNTEC deep tow system, deep tow winch, Global Positioning system, sounding system, high-resolution system, sidescan system, piston cores and vibrocores; on land seismic monitoring equipement, telemonitoring and receiving equipment and portable seismic monitoring systems; equipment for paleontology and sedimentology laboratories; data processing equipment. State of the art equipment includes a special settling tube in the sedimentology lab, an 11 meter heat probe, a pore pressure meter and a radioactive heat generation lab.

Pacific Geoscience Centre

P.O. Box 6000, Sidney, British Columbia, V8L 4B2
Contact: Dr. L.K Law, Research Scientist, Telephone: (604) 656-8438
Personnel: 28
Activities:

Geological studies of the Canadian Pacific continental margin: marine bedrock geology and geophysics including relevant onshore studies; stratigraphy, sedimentology, paleontology, structure, petrology, seismic, magnetics, regional syntheses, coastal geology, geology of estuaries, offshore surficial deposits, relevant geophysics. Electromagnetic induction in the crust. Engineering seismology studies. Tectonophysics. Strong motion theoretical studies. Application of gravity to geological problems, crustal and upper mantle structure and isostasy. Geothermal studies. Marine geophysics, including studies of polymetallic sulphides on the Jaun de Fuca Ridge.

ENVIRONMENT CANADA

Atmospheric Environmental Service: Pacific Region

700-1200 West 73rd Avenue, Bordigan Building, Vancouver, British Columbia, V6P 6G5
Contact: L. Racine, Financial Planning Officer, Telephone: (416) 739-4172
Personnel: 201
Activities:

Provision of meteorological services to the province of British Columbia.

Facilities:

Satellite receiving equipment; Upper atmospheric measurement equipment; Automatic weather stations; Other meteorological equipment; EDP equipment.

Canadian Wildlife Service - Pacific and Yukon Region

P.O. Box 340, Delta, British Columbia, V4K 3Y3
Contact: A. Martell, Director, Telephone: (604) 946-8546
Personnel: 21
Activities:

Migratory birds conservation; wildlife research and conservation.

Environmental Protection Service: Vancouver

Kapilano 100, Park Royal, Vancouver, British Columbia, V7T 1A2
Contact: R.D. Stevens, Director - Program Planning and Administration, Telephone: (604) 666-0048
Personnel: 92
Activities:

The objective of the Environmental Protection Service (EPS) is to ensure that human activities are conducted in a way that will achieve and maintain a state of the environment necessary for the health and well being of man, the health and diversity of species and of ecosystems and the sustained use of natural resources for social and economic benefit.

Facilities:

GC Mass Spectograph; Gas Chromatographs; Atomic Absorption Units; Emission Spetrograph.

Inland Waters Directorate - Pacific and Yukon Region

1001 West Pender Street, Vancouver, British Columbia, V6E 2M9
Contact: E.M. Clark, Regional Director, Telephone: (604) 666-3357
Personnel: 127
Activities:

To promote sound management and development of Canada's water resources in keeping with federal responsibilities and national objectives, including Canada-United States and Interjurisdictional Water Management, Flood Damage Reduction, Water Quality Management Data, Water Quantity Management Data, Water Management Research, Toxic Chemicals and Environmental Assessment and Baseline Studies.

FISHERIES AND OCEANS

Pacific Biological Station

Hammond Bay Road - Nanaimo, British Columbia, V9R 5K6
Contact: Dr. R.J. Beamish, Director, Telephone: (604) 756-7041
Personnel: 203
Activities:

Research activities in support of the management, conservation and enhancement of the finfish, invertebrate, and marine mammal resources of the Pacific coast are carried out by scientific staff working in the following sections: Salmon Production, Salmon Dynamics, Salmon Habitat, Groundfish, Herring, Shellfish, Fish Health and Parasitology and Fish Culture. Research programs include studies of developmental biology, life history, parasites and diseases of salmonids, marine fish and invertebrates, behavior, physiology, endocrinology, genetics, eecology, population dynamics and recruitment, stock assessment and abundance predictions and fish/forestry interactions. Aquaculture research includes the development of hatchery and nursery technology for bivalves, sablefish and Pacific halibut, broodstock selection for chinook and coho salmon, and enhancement of salmonid populations.

Staff are also located on the waterfront in Vancouver and Prince Rupert, at DFO Pacific regional headquarters in Vancouver, the West Vancouver Laboratory, and at the Cultus Lake Laboratory near Chilliwack.

Facilities:

In-house mainframe computer system, local area VAX cluster; scanning electron microscope; research vessel fleet including the W.E. Ricker, 58 metre stern ramp trawler, the Caligus 18 metre drum seiner, 1 self-contained laboratory barge with living accommodations, numerous smaller craft; experimental fish farm located on Brandon Island in Departure Bay at Nanaimo; an experimental hatchery at Rosewall Creek (north of Nanaimo); saltwater fish-holding and quarantine facility; satellite laboratory on Cultus Lake near Chilliwack; several field camps.

Institute of Ocean Sciences

9860 West Saanich Road, Sidney, British Columbia, V8L 4B2
Contact: Dr. J.C. Davis, Director of Science, Pacific Region, Telephone: (604) 356-1514
Personnel: 350
Activities:

The Institute of Ocean Sciences is owned and operated by Fisheries and Oceans. Tenants include the Pacific Geoscience Centre of the Department of Energy, Mines and Resources. The main depot for the Department's Pacific Region fleet is located at the Institute.

For the Department of Fisheries and Oceans, the Institute is a centre for oceanographic research and the provision of hydrographic services. The priorities being addressed are oceanographic research related to the distribution and recruitment of commercial fish species, and to contaminant effects in the habitat of fish and other organisms; prodiction of climate change and its effects, development of coastal marine forecasting, oceanic process modelling, and production of charts and navigational information. Oceanographic research encompasses the fields of physics, chemistry and ecology, and is focused on the coastal waters of British Columbia, the north Pacific Ocean, and the western Canadian Arctic.

The Hydrographic Service conducts field surveys to provide information in the form of charts, tide and current tables, sailing directions, etc., for the coastal waters of British Columbia, the western Arctic, and the navigable fresh waters west of the Manitoba border.

Coastal oceanography examines the processes of flushing and mixing, circulation and water transport on the coast and continental shelf. Studies in the channels and confined waters are related to biological productivity, transport and dispersion of pollutants and nutrients. Long term studies investigate the physical, chemical and biological parameters in the northeast Pacific and the variability of the circulation of the Alaskan gyre.

Arctic oceanography is conducted in the Beaufort Sea, the waters of the Canadian Arctic archipelago, and adjacent waters of the Arctic Ocean. Studies are concerned with the seasonal circulation of Arctic fjords and continental shelf: the dynamics of sea-ice; the processes of ice growth and decay, and the air/ice/water energy budget. Theoretical studies, remote sensing and numerical modelling forms an integral part of the foregoing studies.

Chemical oceanographic studies relate to trace concentrations of heavy metals in the marine environment, hydrocarbon pollution and the global carbon dioxide budget. In the field of ecology, plankton and benthic invertebrate distribution and ecology are studies in relation to production, physical forcing mechanisms, pollution and ocean dumping.

The ocean information service undertakes marine environmental data review and assessment, marine climatological data studies, data compilation and quality assessment.

Facilities:

(i) Four large vessels ranging from 69 metres to 20 metres, one of which is rated Ice Clause I. One submersible at 6 metres and 27 launches and smaller vessels under 10 metres.

(ii) VAX785 computer and a MICROVAX II, interconnected using ETHERNET; a GANDALF PACX data communications exchange.

(iii) A water tunnel of overall length 10.5 metres has a laminar flow working section of 1.3 metres length and 30 cm by 30 cm cross section. Flow speeds can be obtained within the range of 0 to 12 metres per second. Internal pressure can be adjusted to permit the lid of the working section to be removed exposing the free water surface.

(iv) An acoustic calibration facility and a high pressure testing facility for small equipment.

(v) A towing tank 0.5 metres wide, 1 metre deep and 10 metres in length.

Vancouver Laboratory

Marine Drive, West Vancouver, British Columbia, V7V 1N6
Contact: Dr. R.J. Beamish, Director, Telephone: (604) 756-7041
Personnel : 26

Activities:

Staff located at this site are working in the areas of fish culture, salmon production and salmon habitat. Fish culture research is focused on four major areas: fish nutrition research, stress, reproduction biotechnology, and aquaculture biotechnology. The Fish Culture Section also includes the Centre of Disciplinary Expertise (CODE) for biotechnology and genetics in aquaculture. While the majority of research programs are directed at salmonids, studies are also underway on sablefish and Pacific halibut. Salmon production research at this facility is directed toward the production of sockeye salmon in coastal and interior lakes. Studies involve the measurement of recruitment success, investigation of factors limiting the production of sockeye salmon, and determination of methods to maintain or increase reproduction from selected lakes. The biological and reproductive limits imposed on the species by genetics or the environment are under study. Salmon habitat research programs are directed at examination of the manner in which salmon benefit from using the range of available habitat and the consequences of changes in habitat quality with respect to fish production.

Facilities:

The six hectare site includes one well providing 910 L.P.M. of constant temperature freshwater; indoor aquarium for 1986 fiberglass tanks with capacities ranging from 50 to 1,100 litres; outdoor aquarium area holding 49 tanks, eight feet in diameter, each tank holding an average of 3,500 litres of fresh or salt water.

FORESTRY CANADA

Pacific Forestry Centre

506 West Burnside Road, Victoria, British Columbia, V8Z 1M5
Contact: W.D. Evans, Regional Finance Officer, Telephone: (604) 388-0685
Personnel: 172
Activities:

The Centre is engaged in basic and applied research in forestry, technology transfer, negotiation and administration of forestry agreements and job creation. Research activity is conducted in silviculture, tree physiology, soils hydrology, meterology, forest fire research, entomology, pathology, remote sensing, herbicides and biological control.

Facilities:

Seanning Electron Microscope; Transmission electron microscope; Image Enhancement; Fourier Transformer infra-red spectrometer; vax 8650 computer.
Electron microscope; Image enhancement; VAX 750 computer.

NATIONAL DEFENCE

Defence Research Establishment: Pacific

FMO Victoria, Victoria, British Columbia, V0S 1B0
Contact: A. Patrick, Program Control Officer, Telephone: (613) 996-5912
Personnel: 138
Activities:
Defence Research Establishment: Pacific (DREP), located in Victoria is concerned primarily with research related to the problems of anti-submarine detection in the North Pacific and in the Arctic Archipelago, including research in the areas of underwater acoustics, magnetics, and fluid dynamics, and with materials research.

Facilities:

Research Vessel - CFAV Endeavour.

NATIONAL RESEARCH COUNCIL OF CANADA

Division of Mechanical Engineering - see also National Research Council of Canada (Eastern Ontario) for additional information.

Tribology and Applied Mechanics Laboratory - Western Laboratories

3650 Wesbrook Mall, Vancouver, British Columbia, V6S 2L2
Contact: C. Dayson, Telephone: (604) 666-2623
Activities:

The Laboratory specializes in scaled tests that simulate end-use conditions of friction and wear in the materials and components of mechanical systems which involve sliding, rolling, and impact motion. Laboratory experiments are carried out both to solve practical problems and to research the fundamentals of wear, friction, and lubrication processes. These are complemented where appropriate with field testing and theoretical modelling. Experiments are conducted on brake friction in a vacuum; rolling contact wear of railway wheels and rails; sliding wear of gas-turbine seal materials; impact/fretting wear of metals; and boundary lubrication effectiveness of oils and lubricant additives for machine tool ways. Studies are undertaken of steady state and dynamic characteristics of fluid film bearings, and the development of lubrication systems or such bearings.

The Laboratory also performs work in the development and assessment of novel mechanical devices suitable for small-scale, decentralized economic development, such as equipment for farming and logging operations.

Herzberg Institute of Astrophysics - see also National Research Council of Canada (Eastern Ontario) for additional information.

Dominion Astrophysical Observatory

5071 West Saanich Road, Victoria, British Columbia, V8X 4M6
Contact: J.E. Hesser, Telephone: (604) 388-0007
Activities:

The Observatory operates as a national centre for optical astronomy, conducting in-house basic research into the astrophysics of stars and stellar systems, while supporting similar programs for visiting research scientists.

The facilities of the Observatory include a 1.85 m Cassegrain with spectrograph giving dispersions of 10 to 120 A/mm using a three-stage image tube, a reticon light detector or a pulse-counting Shectograph, and a 1.22 m coud{ telescope with high dispersion spectrographs and a variety of detectors, plus a radial-velocity spectrometer. Mechanical and electronic laboratories support instrumentation development.

Data reduction facilities comprise a PDS microdensitometer, Vicom and Parallax image displays, and a computer network consisting of a VAX 11/780, three Microvax II machines, and an Alliant FX/1, all with associated software for the analysis of spectroscopis and direct astronomical images. With this equipment, the Observatory operates a Data Centre for the archiving and reduction of astronomical data obtained from space. Software is also available for the design and testing of optical systems.

An extensive astronomical library operates as a branch of the Canada Institute for Scientific and Technical Information (CISTI).

Dominion Radio Astrophysical Observatory

P.O. Box 248, Penticton, British Columbia, V2A 6K4
Contact: L.A. Higgs, Telephone: (604) 497-5321
Personnel: 23
Activities:

The Observatory maintains and operates, both as a national facility and for in-house research, a radio-astronomy observatory whose major instruments are a spectroscopic synthesis telescope and a 26 m parabolic antenna. A modern image-analysis facility is maintained and developed to match user needs. Research is generally in the area of the galactic interstellar medium, especially supernova remnants and regions of star formation. Development of new instrumentation and data processing methods play major roles in Observatory activities. Routine measurements of solar emission at 10.7 cm are made as a service to the international scientific community.

NORTHWEST TERRITORIES

ENERGY, MINES AND RESOURCES CANADA

Geophysical Observatory: Alert

Alert, Northwest Territories, X0A 1X1
Contact: R.J. Halliday, Manager - Canadian Seismograph Networks, Telephone: (613) 995-5399
Personnel: 1
Activities:

This Observatory contains a station in the Canadian standard seismograph network and a station in the Canadian Magnetic Observatory Network.

Facilities:

Photographic and electronic recording equipment - including: 3 long-period and 3 short-period Willmore seismometers; AMOS MKII digital magnetic observatory with fluxgate and photon precession magnetometer.

Geophysical Observatory: Mould Bay

Mould Bay, Northwest Territories, X0A 1X1
Contact: R.J. Halliday, Manager - Canadian Seismograph Networks, Telephone: (613) 995-5399
Personnel: 1
Activities:

This Observatory comprises a station in the Canadian Standard Seismograph Network and a station in the Canadian Magnetic Observatory Network.

Facilities:

Photographic and electronic recording equipment - including: 3 long-period and 3 short-period Willmore seismometers; AMOS MKII digital magnetic observatory with fluxgate and photon precession magnetometer.

Geophysical Observatory: Yellowknife

P.O. Box 51, Yellowknife, Northwest Territories, X1A 1X1
Contact: Dr. R.G. North, Research Scientist, Telephone: (613) 992-5038
Personnel: 3
Activities:

This Observatory contains a station in the Canadian Standard Seismograph Network and a station in the Canadian Magnetic Observatory Network. The Observatory also operates the Yellowknife array of seismometers which is used in monitoring nuclear explosions.

Facilities:

Electronic recording equipment - including: High dynamic range broad band seismic sensors and digitizers, digital radio telemetry equipment, state-of-the-art computers and laser optical disk storage, satellite telemetry dish; AMOS MKII digital magnetic observatory with fluxgate and photon precession magnetometer.

INDIAN AND NORTHERN AFFAIRS CANADA

Analysis - Nanisivik

P.O. Box 1500, Yellowknife, Northwest Territories, X1A 2R3
Contact: P. Laporte, Regional Manager - Water Resources, Telephone: (403) 920-8240
Activities:

A study was initiated in 1975 to determine the concentrations of lead, zinc and sodium in sediment and marine biota near Nanisivik. A similar study was initiated in the vicinity of Polaris in 1981. The work was conducted by DFO and partially funded by NAP NWT Region. Funding in 1983/84 was in payment for analysis, data reductions and preparation for samples collected in 1981 at both Polaris and Nanisivik. Studies continued in 1984-85 by DIAND looked at Cd, Pb and Zn particulate fluxes and seawater concentrations on Strathcona Sound over the winter - spring season. DIAND funded DFO in 1985 to study heavy metal concentrations in ringed seals from Strathcona Sound and Admiralty Inlet.

Eastern Arctic Scientific Resource Centre

Igloolik, Northwest Territories, X0A 0L0
Contact: Mr. A. Sinclair, Scientist in Charge, Telephone: (819) 997-9666
Personnel: 3
Activities:

The Scientific Resource Centre is used to support seasonal research and for continous research by four government departments. Current projects being undertaken include Seismology, Climatology, and Geomagnetism. Information collected is used by DIAND, DOE, DFO, and EMR.

Facilities:

Includes a micro-computer, basic instrumentation, as well as special equipment for data collection on air pollution, geomagnetic variation, climatology and seismology.

Flood Damage Reduction Program

P.O. Box 1500, Yellowknife, Northwest Territories, X1A 2R3
Contact: B. Latham, Regional Hydrologist, Telephone: (403) 920-8251
Personnel: 0.2
Activities:

N.W.T version of national program to reduce flood damage by mapping and restructing further development in flood prone areas. Hay River, Fort Good Hope, Fort Simpson, Fort Macpherson, Aklavik, Fort Liard, Nahanni Butte, Fort Norman and Tuktoyaktuk have been studied.
